I don't like the way you post messages like this several times without
backing them up with a few facts. If you have a greif with ICD, check it
out with them first, then take it to the newsgroups, but you can at
least be brave enough to sign your messages.

Nick

I don't totally.

The comp.sys.atari.falcon is ok for me, although I would probably tend to read both csa.falcon and csa.st as they share a lot in common.

I'm not sure that I agree totally with the creation of comp.sys.atari.internet. It sounds to me like a newsgroup for one particular application of atari computers. In this case, why have a comp.sys.atari.internet and not a comp.sys.atari.music and a comp.sys.atari.dtp, which are even more widespread applications on our platform than internet. I'm afraid that the mass of internet related posts that has spring up recently is only due to the new programs that are around, and the number will gradually stabilize itself to something that can be supported by the existing hierarchy.

As for renaming comp.sys.atari.st.tech to comp.sys.atari.tech, you'll be indicating it as a place where Atari 8bit and Atari PC issues will be welcome. If this is what you want, ok, but I'm not sure about it.

I'm not sure what the use is of splitting falcon and st newsgroups. They both run TOS, and basically the same software. And the amount of posts on csas is not huge enough to suggest the need for such a split.

I would add that comp.sys.atari.marketplace is a must, if this reorg was to take place.

I don't want to sound like someone who is opposing the whole idea, but you will have to face arguments tougher than this if you want to launch an RFD and a vote in news.groups

You must know that newsgroups politics are TOUGH. Try hanging around news.groups and see what happens there. THere is also the problem of

newsgroup propagation. A new group/hierarchy takes time to propagate to all usenet. Sometimes they are submitted to approval by newsmasters, which is risky nowadays with the knowledge these people might have of what atari is. You must understand that if this passes, there are sites that will no longer receive the c.s.a.* hierarchy at all, maybe for weeks or months, maybe forever...

I actually like the current way things are set up. If one thing is needed, IMO, it's the marketplace group. We don't need lots of newsgroups that are all crossposts of each other like the Amiga folks have.

Nicholas brings up some good points, which I snipped out - but thinking
of comp.sys.atari.marketplace brings up a random thought.

How difficult is it to modify a charter of an already existing
newsgroup? It seems that we already have an unused newsgroup available.
People could ANNOUNCE their Atari shows, and items for sale - things
of that nature in comp.sys.atari.announce.

Is it feasible to change the charter of a newsgroup?

Just a thought,
Terry

It's on ftp.demon.co.uk/pub/atari/ka9q/nos042_s.tos or something very
similar.

It is supposed to be on ftp.demon.co.uk in the pub/atari/oasis
directory. If not then try getting a copy from
www.pwomar.demon.co.uk/oasis135.tos

Currently, I use Beckemeyer Development's Hard Disk Backup program.
Very simple and straight forward (I use the tape drive option).
Only problem is, Beckemeyer is out of business I believe, or else
has stopped supporting Atari. Try to find a used copy out there.

Good question... to be asked in news.groups.questions. I beleive that
the modification process goes through the same vote process :the charter
is what is voted for when you create a newsgroup. changing a charter
therefore changes the basis on which people voted, so I suppose it has
to be re-voted. However, keeping the .announce ng would limit the
propagation issues I talked about in my previous post.

From: 404on040@remove2reply.iwvisp.com
Message-ID: <60sv3m$13f1@news.iwvisp.com>
Source record: 115965

Hi,

I seen a new(?) application on the French FTP server called EASY_GEM.
It looks interesting, but from the U.S., transfer is almost impossible.
I don't know if the site is hammered in the morning over there or
what. I had good luck with several other *.de ftp sites at the same
time.
I did manage the text file, but it is all in French. I'm having
problem enough with my German, so if some kind sole could scribe a
short description of the app, I would apreciate it. (wish Newsie had a
spelling checker:).

Thanks,

Mike

I have used DB for my streamer but not for flops. I'm surprised you
find it a problem. The only moan I have about it is that it is not
very efficient streaming to tape.

>Please, what are you guys using?

Back in pre-history I used Turtle (PD). It never gave any real trouble
but, then, I didn't have any major disc crashes so never tested
"Restore" in anger.

No? Fast-RAM has been available for ages and the main problem with
CAF is Steinbergs fault. I don't remember the exact problem, but CAF
has been disassembled and examined and found to be badly written. It
uses hardcoded buffers in the executable it self making it very Fast-RAM
unfriendly. If you want to know more I can direct you to a person who
knows.

> It's a problem of missing downward compability of FastRam at all.

I wouldn't say that as Fast-RAM has been available for ages and everyone
knows
how to program to make it Fast-RAM friendly.

Body handling: HTML body converted to readable text

Thanks to those who responded to my previous posts,
my MEGAFILE is now sold! ;-)

The following items remain FOR SALE/TRADE:

* 4160 STE (TOS 1.62, 4 Mb) ==>> ie: 1040 STE @ 4 Mb
* MEGA-ST 4 (TOS 1.04, 4 Mb)
* SLM 804 Lazer Printer
* STM 1 Mouse
* Softwares
DTP: Timeworks - Publisher
Soft Logic - Publishing Partner
Music: Dr.T - D-50/D-550 Editor
Dr.T - D-10/D-110 Editor
C-Lab - Notator SL 3.1

Offers from C a n a d a and U n i t e d - S t a t e s ONLY!

Preferably TRADE against following products WANTED (I need those):

* MEGA-STE (TOS 2.06, 4Mb Ram, Internal HD)
* STacy 4 (TOS 1.04, 4Mb Ram, Internal HD).
* Crazydots-2 graphic card for TT (or equivalent ET-4000 card)

NOTE: Canadian banks cause troubles for cashing foreign currency
of any kind, including American. This can be avoided by an
electronic fund transfer (Western Union or similar), which
is usually cleared within 48 hours of transaction.

Nonetheless, if you're interrested in trading your MEGA-STE
or your STacy, we can arrange something, as no money would
be trading hands accross the border.

I heard it was from the Old Dutch spelling Oll Korrekt.
Anyone still speak Old Dutch? :-)

This is the first version for me. I did the complete install.
Not knowing what to expect, I probably did a reboot to get back to regular
TOS.

> Drop back to tos copy all the Magic Files to another folder delete
> them and do a clean install problem solved. Keep the applicant.dat and
> info files as these hold all the set up info install and copy these

This line from magx.inf looks suspect:

#K 4F 53 00 44 46 00 43 00 41 4D 00#_DSK MAGXDESK V3.23 1

In other words I think that should be on 2 separate lines.
Could this be the cause or the result of my problem?

TOS always reports the real size in bytes, not the number of bytes
allocated because of clustering.

>but, then, I didn't have any major disc crashes so never tested
>"Restore" in anger.

Testing the restore capabilities is essential. I once used streamer back up with Fast Copy Pro. After a while I badly needed to use the back up. Only then did I find out that Fast Copy had been filling my backup disks with zeros. There was _no_ data there at all!!! Not even Fast Copy Pro itsely could find anything to restore!

I am now testing SBACK485. It seems very good, but I'm cautious. Anyone had any experience with that one?

I've got my Falcon, plus a 1.08 Gb SCSI residing in a Desktopper. I also opted for the AT Keys interface and have a got a Cherry keyboard. The Desktopper is functional, quite ugly really, but it does the job and at least I can now put it up on a shelf and have just the keyboard and mouse on the desktop!

If I was buying again, I think I would opt for either the C-Lab case or the TUS rack mounted case, which is solid and studio-looking!

No way would I go back to using the Falcon keyboard now though!

Source record: 115984

Hi there,

actually, I have a very simple question. I recently acquired an old
Atari ST to use with Cubase. Now I downloaded an editor for my
Roland Juno synthesizer but when I start it up, it says the monitor
must be in low(or is it medium) resolution. When I try to alter this
in the desktop menu, it doesn't work, high res is my only option.
My monitor is of the type SM124. Do I have to start looking for
another monitor now?
BTW, any tips on good software that might come in handy on the Atari
ST, like tools or something...

Please reply to my e-mail address : wimr@trisoft.be

Thanks,

Wim.

> Anyone had any experience with that one?

I have tried SBack and found it to do everything it claims to. Even the compression works well in that it is not too slow. I backed up about 50MB of hard disk onto less than 20 DD floppies IIRC. Restoring individual files works well too.

In the end I decided not to use it because I find backing up to floppies too time consuming. My current system is to have a zipped copy of all the programs I use saved onto individual floppies including any configuration files. All I have to do now is to backup my current work to one or two floppies after every few sessions. I found this a much quicker way to restore my hard disk when I decided to repartition it. The only thing you have to remember is to have a working copy of STZip on a floppy before you start otherwise you're f*&^%d ;-). This has the advantage that your backups are not confined to a proprietary system - you can still get at your files using a PC if the Atari is temporarily out of order.

Also as I have plenty of disk space free I created a single "backup" partition which I periodically copy my boot partition and any other important stuff to.

Hope this is relevant,

Michael

Otto Kaserer (from Austria) was a quality engineer at Ford Motor Company.
This was the time as Ford started series mass production on a production line.
At the end of this production line Otto Kaserer signed all cars (that passed
the quality check) with his initials O.K.
And that's the whole truth.

kind regards
Markus

Its usefulness goes beyond just those versions too, because newer versions
of WordPerfect on the PC will allow you to convert files saved with older
versions, and still use them. :)

Sounds like your setup is extremely nice! I think it comes down to a matter
of taste/opinion about the DeskTopper-I don't think its ugly at all. I also
have a dislike for towers in general. (this is all just me, of course!) I
also need access to my cartridge port because I use VideoMaster Falcon and
don't want to give it up. (I couldn't tell whether you could still use that
with your tower setup or not). I would say its best if the original poster
grabbed some ST Format/ST Review mags and looked over the reviews 'n pics
of the DeskTopper kit. See ya later...! :)

I�m not happy to do ths, but I feel I have to warn other Atarians against being ripped off by this company.

I was looking for a Multiboard for my MegaST this summer, and got a "sure, we have it in stock"-reply from Woller & Link. They didn�t accept credit-cards, so I had to send them a cheque.

Several weeks later the card had not arrived. I sent several mails to Woller & Link, but got no replies. I finally got a reply late in August, wher� they told me that the card most certainly was on it�s way and that I should get back to them if it hadn�t arrived by September 15th.

Since then I�ve sent them several mails but so far without luck. It seems like they don�t even bother replying...

So far I�ve been ripped off for more than UKP200 from different well-known Atari-dealers. No wonder the market shrinks if this is how they treat their customers...

I'm not sure what your problem is. I've used DBack 2 a lot (only on tape though), and it works very well. It's a bit slow writing to tape, otherwise it works very well indeed.

> Please, what are you guys using?

For floppies I use Super Backup 4.85, which looks a bit crude but works extremely well. I've never had any problems with it, although I haven't tested it since I installed the Afterburner.

> I actually paid good money for Diamond Back once. Since its so bad it's

> free.

DBack is very good, I guess there must be something wrong with your installation/setup. Have you tried to install it again from scratch? It might be a screwed up configuration-file or something. And are you sure that the subdirectory "LOGFILES" exists? Dback can't save it's logfiles if this directory is missing! So delete only the files in it and not the directory itself when you're getting rid of old logfiles.

I have DB II and I haven't been able to find anything about
tape in it!
I BOUGHT (a month ago) a copy of the latest DB III, and it's shit,
as far as I am concerned. I bought it to back up Spectre partitions, and
reformatted my hard disk after. Now, not only can't I find any of the
files on the tape, but Oregon Research refuses to answer e-mails or
FAXes about it. The Support phone no. gives a recorded message that all
of their time is being spent fixing Termite.
I have lost 200 Mb of unreplaceable, without hours of work, Spectre files,
and can't find the backups of my other regular files (which I fortunately
saved another way, too. I bought another 420Mb HD!)

n> screen resolution with my STFM.
Be werry, werry cautious.

The installation of one of these in an STFM involves some intricate soldering
to the pins of the processor chip.

You'd also be best looking for a good monitor to go with it to get the best
results.

>another monitor now?

Not necessarily :-)

There are AUTO emulator programs which will pretend that your 124 is
Med/Low res. and will allow you to use this program. I'm afraid I
can't remember their names but perhaps someone will remind me. Or you
could do a web search for Atari programs containing "emulator" in
their descriptions.

Depending on how the program is constructed it may be difficult to
drive it - many Med./Low programs rely on colour contrast to display
their controls. The emulators will give you a decent greyscale - I
hope that will be enough.

>BTW, any tips on good software that might come in handy on the Atari
>ST, like tools or something...

Oooooohhhhh!!!! This question is TOO general. There are hundreds of
tools - it all depends what you want to do.

So what? Saying that a falcon group is not needed becuase you will read
them booth anyway is not the point. Ofcourse most people will read them
both, but what is the main advantage is that it's much esier to find
what you are looking for or know where you most likely will get an
answer
if you need one. This is the main purpose with having different groups.
As
you probably read c.s.a.st.tech as well maybe we can remove that one to
and just have a c.s.atari? Well why not remove atari as well as you
maybe read all c.s gropus? ;-)

> I'm not sure that I agree totally with the creation of

> comp.sys.atari.dtp, which are even more widespread applications on our

That's not such a bad idea. If you want them, why not try to create
them?
I think c.s.a.internet is uefull as more and more people connect to the
internet and have a few questions or problems they need solved. It's not
realy a tech quesiton or st guestion, is it? It's more related to
internet.

> platform than internet. I'm afraid that the mass of internet related
> posts that has spring up recently is only due to the new programs that

Yes. I agree with that. I have been thinking of that as well.

> I'm not sure what the use is of splitting falcon and st newsgroups. They
> both run TOS, and basically the same software. And the amount of posts
> on csas is not huge enough to suggest the need for such a split.

The main problem is that people keep to mailinglists insteed of
newsgroups
as the are _not_ specialised enough. Just look at the MiNT mailinglist.
It get much more mails per month than c.s.a.tech can ever dream about.

Why shouldn't this information be easaly accessable by all atarian, just
those
who subscribe? It's much better to have newsgroups than mailinglist if
you
ask me as they are much esier to read and find what you are looking for
and
you don't need to get your mailbox flooded of mails every day.

> I would add that comp.sys.atari.marketplace is a must, if this reorg was
> to take place.

I agree 110%.

> I don't want to sound like someone who is opposing the whole idea, but

I don't agree and we need tp get people aware of the Atari, not make
them
forget it. If you don't have a newsgroup you want hassle the guy in
charge
until you get it!

Hi Frederic,

Use your Alternate key and the cursor keypad. Since you can already move the mouse, I suppose you know what I mean - Alt+Arrow moves you 8 pixels in the direction the arrow points. Alt+Shift+Arrow moves you 1 pixel. Alt+Insert simulates a left mouse click, Alt+ClrHome simulates a right mouse click.

From what I have understood, it's an extended GEM library for assembly programmers. It's not exactly an app, but more a set of tools for programmers.

> another monitor now?

With a monochrome monitor, like the SM125, the only available resolution is hi-res (640x400x2 colours). To use medium (640x200x4) or low-res (320x200x16), you need either an RGB monitor, such as the good old Atari SC1224, a peritel/scart equipped TV (Europe only, and with the appropriate cable) or any old TV set if you have an STFM : The M stands for RF Modulator, and means that you can plug it into a TV antenna.

IMO, the programmer was quite silly to limit a synth editor to low/med res, as most music apps use hi-res, but it's a bit late now.

> BTW, any tips on good software that might come in handy on the Atari

59. FS: Nemesis+Videlity, new, cheaper!

Newsgroup: comp.sys.atari.st
Date: 1997-10-01 00:00:00 UTC
From: tomo@fly.cc.fer.hr
Message-ID: <60umkg$7om@bagan.srce.hr>
Source record: 116013

Hello!

I offer my Nemesis + Videlity bundle for sale. I got them in
April. I never installed Nemesis (I hardly ever looked at it), but I
registered Videlity to my name. I'd like to sell those together, but that
will mostly depend on the interest people will show for it.

Prices are 70% of the original ones.

NEW MY OFFER

Nemesis 52.50 37.00

Videlity 14.95 10.00

Although I live in Croatia, the postal costs to anywhere on Earth
will not exceed 10.00. Buyer also pays the bank charges in case of bank
transfer - 6.00 tops. Note that you have to pay that to Titan also if
you buy directly from them.

Please, reply directly to my email: tomo@fly.cc.fer.hr, I don't
check this group very often lately.

Greetings to all!

Tomislav

TBH, I'm in total agreement with this. If we dilute the atari groups too
much then we'll lose contact with each other and the amount of
cross-posting will increase.

Let's justs tick with c.s.a.s. and get a group for sales and wants.

Kind regards
Mike Kerslake

Quite correct. In fact the word atari is Chinese or Japanese for a game move or something like that isn't it! In the context that we use the word there's no infringement of copyright. If I started a company and we built and sold computers with an Atari logo/name on it without permission then that would be an infringement.

>Must rush - got to hoover[tm] my mini[tm].

And any company worth it' salt would know that when trademarked names like your examples above come into very common use, then who needs to pay for expensive advertising!

Coke = Coca Cola!

Kind regards
Mike Kerslake

I didn't catch what machine your using, but a long time ago I used
Turtle and it did a nice job of backing up to floppys on my ST. The
only problem I had was when I over wrote one disk in the middle of the set

and couldn't restore the backup I created. It did work well however the times I didn't mess up:).

GET THIS THROUGH YOUR LAME ASS SKULL, ME - you DON'T have the right
to post anything you want here. And don't try to wrap yourself in the
American flag to justify what is becoming highly abusive behaviour as
part of a sick power trip by a very sick individual in need of some
major psychiatric help.

According to the 1974 Supreme Court decision FCC vs. Pacifica,
those who are considered a "public nuisance" ARE NOT COVERED UNDER THE
FIRST AMENDMENT OF THE US CONSTITUTION, and therefore the provider or
broadcaster of said nuisances' spewings are held personally
responsible, and are liable to prosecution under the full extent of the
law.

As you have been asked several times to provide evidence of just
what ICD did to either you or your friends, IN DETAIL, by I and several
others - and you reply by calling us "morons" and using highly abusive
and obscene language, while dancing around giving any hard evidence, you
thereby qualify as a public nuisance, and you thereby have relinquished
any claims of "constitutional rights". You are also opening yourself,
AND your provider to major prosecution under US libel laws by ICD.
Gettum message, troll-boy?

You ARE going to stop. Because copies of each and every message
will be sent to your service provider to show that you are abusing your
user agreements. AND will be sent to ICD so that they will be able to
access the situation and see to it that the proper measures will be
taken.

So you have one more chance. Present your evidence. ANY Evidence.
If you can't produce it, then stop the nonsense.

>What kind of morons are you anyway? My statement is 'THE FACT'!

no, we need something better than that. How about names, places, dates, situations, stuff ordered, actions taken? Why should we trust an anonymous person who claims that he's a be-all and know-all, and who calls those who want some more concrete details as "morons"? After all, TIFKAS (The Idiot Forever Known As S*ncl*p) also claims he's a be-all and know-all regarding Ataris and Macintoshs and refers to us as "morons", but when a closer look at his claims and flames had been made, his "knowledge" has been shown to be as useful as a dead donkey, and he generally disappears with his tail between his legs.

We are certainly not "morons". Neither are we inexperienced in dealing with crooked companies and poor service from certain Atari vendors, and there have certainly been warnings on dealings with such companies in the last few months - complete with specific, verifiable information. All we ask are for some specifics of what happened and what action is being taken - otherwise, your missives will be taken as nothing more than the ravings of a misanthropic troll without two rocks to rub together for brains who posts with an axe to grind or to get attention.

Please also be aware that making unsubstantiated claims of this nature about companies like ICD can be constituted as libel in a court of law and that they can take the proper legal action for compensation.

And don't think that posting with a phony name affords you anonymity and therefore freedom from prosecution, either.

Take that into consideration before posting any more of your "facts". And have a nice day.

Hi
I've experienced strageness re Diamond Edge on my Falcon,
specifically Diamond Mirror.
When I try to configure Diamond Mirror (has to be done
from within Diamond Edge) I am told that DMirror.prg
does not exist in the auto folder.
this is, of course, nonsense.
So has anyone ever had a similar problem, and found a
solution?
I am using SToop, Diamond Edge 2(the latest), on a
14MB almost stock Falcon.

In article <60dp2v$p78$1@cti01.citenet.net>
q-funk@citenet.net (Martin-Eric Racine) said:-

>How about, programmers read mostly c.s.a.st.tech while average people
>usually don't bother with it? WHERE should one post then?

It depends on the subject of the post. An article about technical aspect of something (hard/soft) in c.s.a.st.tech, about programmation in c.s.a.programmer, about 8 bits Ataris in c.s.a.8bits, and all other articles related to 16 bits or more Ataris in c.s.a.st. People then read only the groups interesting them, that's their choice. I know some persons not reading this general purpose group, but only c.s.a.st.tech and c.s.a.programmer. These guys missed all the STiNG setup threads IMHO wrongly posted in c.s.a.st.

>What about the fact that NONE of the STiK clients handle cross-posting,
>meaning one must re-post twice instead of just once, when the message
>could apply to both newsgroups?

Multiposting is bad. I think a real newsreader should allow crossposting, but if one doesn't, you should not multipost, but choose only the most appropriate group. And write to the newsreader's author about this problem.

BTW Newsie has other problems with Usenet standards, like sometimes breaking thread references, cutting long titles, no good charset conversion, etc... and perhaps also the "reply in another thread" problem I wrote you about.

>There really should be a comp.sys.atari.falcon

I don't think it's really urgently needed. I have no problem with ST, TT, Falcon, Hades, etc... in the same group, in fact I think these are all upwards compatible evolutions of the same computer, the original ST, and that *most* topics discussed are interesting all machines. If we created a group for *only* falcon specific subjects, this group would have very little traffic. And also Falcon owners must read the 2 groups.

The question is: are ST owners really bothered by the Falcon specific threads in comp.sys.atari.st? More than by for sale adds, or Internet setup threads, or any other post category?

>c.s.a.st.tech (should really be re-named comp.sys.atari.tech to be more
>generic).

Renaming a group is not directly possible, you must remove the old one and create a new group. But it's a bad idea: because of the way

Usenet works it could lead to many people unable to read the group or having bad distribution for monthes... Finding a good name for a new group is important because you know it's very difficult to rename it later.

Bye, Bruno.

| Seeya - Dave.....

Well, finally someone will an ounce of common sense and the ability to respond to my opinions in an intelligent way! Thank you Dave for being critical of my post but at the same time intelligent with it as well.

You are the only non-reactionary person yet to reply to my warnings. And as such I will give you my honest replys not tainted with defensiveness as you are deserving of the same respect you have shown me.

Now... to respond to your message... Slander is the disparagement of an _individual_ through allegations made that are proven to be untrue. I think what you meant to say was _Liable_. Which is roughly the same thing but, for a business concern.

However, neither case applys here because I have made NO allegations (which several of the idiots following this thread have neglected to notice). What I have done is offer my feelings and OPINONS (I even stated this as such quite clearly) based on what I have heard from my friends and their telling me about their experiences with ICD.

Now do you understand?

As for me keeping my identity private -I have the right to do that. And given the backlash of brainwash (braindead?) non-sense I've received here for simply expressing my opinion I would say that I made the right choice. -But, in reality I did it initially for keeping the spambots away.

Peace,

ME

Not sure if I follow you here, Terry - are you talking about the
DIAL.SCR file? I thought the solution might be to change the
"SUCCESS = CDWAIT" to "SUCCESS = CONNECT". Tried it - didn't work.
Can you show us your DIAL.SCR to see how you do it?

(Btw, the screenshot I refered to is in Atari Computing #3, page 34.)

> saved another way, too. I bought another 420Mb HD!)

I have had a limited amount of success with Diamond Back III.. for whatever reason (I thought it was the DDS-1 drive, a Wangdat 3200, that was the problem, but evidently not), when I backup my files, it takes me several backup attempts to get the software to verify the backup correctly. It is only after the verification that I feel somewhat comfortable that I have a good backup.

I also have had problems when the software cannot seem to locate the logfile on tape, when I've just done a "recover logfiles on tape" option to find it in the first place!

It makes doing hard disk recording on the Falcon a bit more difficult then it should be.. there should be a reliable backup program out there!!

So.. what else is out there, anyway?

I'm not one of the people who responded to you, but I am compelled to respond to this post.

First, "ME," why don't you use an email address that I can respond to? If you don't have courage to back up your opinions, they cannot be worth too much.

Second, posting an opinion is fine.. it just doesn't do anyone any good for you to post that opinion without backing it up with something. In other words, instead of saying 'so and so is cheating,' maybe you could do us all a favor and let us know HOW and WHAT THEY ARE DOING that is cheating so we can make up our own minds. Otherwise, you just sound like a disgruntled ex-employee, or maybe someone who sells a competing product.. think about it.

I can't stress enough that not using a real email address means, to me, your opinion isn't worth jack, because you are not backing it up with anything. If something is worth saying, it's worth standing behind, not cowardly hiding in the shadows.

I am getting a little woried about my Atari STe.
A simple problem which faces all computer users,
the millenium date bug!

Does anyone know if this will effect TOS based machines?
Will there be any software which will not run after 2000?
Will the clock reset to 1 jan 1900 or to some other date?
Will the other date be the TOS date,AES date or Machine date?
Is there a patch program (Software/Hardware)?

This is SERIOUS problem which we start taking action on NOW!

Cross-posted to: or.forsale,pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech

If you wan't me to read any response from you, do not respond here, Direct all responses in E-Mail to: bensmith@teleport.com

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my Web Page, please E-Mail me at bensmith@teleport.com.

I'm looking for certain Items for my Atari. Item (1)Mega 4 ST. Not a Mega 2 ST upgraded to 4 Megs. I need a Mega ST with 4 Megs of RAM Populated at the Factory. A real Mega 4 ST, preferrably with TOS 1.4. (2) I'm also looking for a Canon IX-12F Flat Bed Scanner with a Navarone Cartridge & SoftWare. (3) I'm looking for CatBoxes for Atari Jaguar, as well as Jag Controllers, Jag-Links and even complete Jaguar Systems. If you have what I'm looking for, check my Atari Catalogs or E-Mail: bensmith@teleport.com

In some cases I'm willing to discount a sale if the Buyer makes an order of enough of my stock. One example, a customer ordered over $200 of software. So I discounted his order %25.

I've added more Items to my Catalogs, such as several large boxes full of Atari ST Software. All of them Complete in Boxes with Documentation. Some are still UNOPENED and SHRINKWRAPPED. As well as an Atari SM125 Mono Monitor with a Built in Monitor stand and an Atari Laser Printer. For the Classic Atari 8 Bit Line Added Hardware was a U.S. Doubler Disk Drive plus a modified 800xl with a built in Translator on a switch that will run older Software without a Translator Disk Plus Lots more new 8 Bit Disk SoftWare for $5 each.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: SLM 804 Laser Printers, Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes,

Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks,
Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports

on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.
--
Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

>Can you show us your DIAL.SCR to see how you do it?

Petter,

Yes, sorry, I meant "DIAL.SCR" I saw my error, but figured you'd know
what I was referring to. Well, if you're talking about the final
"Connected" message, then I don't know, because I never really pay
much attention to it. I look at the communications going
on before that, when the modem first establishes communications and
transmits the info to the DTE. Maybe it just hangs around long enough
for me to read since I'm at 14400, and not for you at 28800. It will
be a line like: "CONNECT 14400 LAPM MNP 5 V.42bis" or something of that
nature. It should appear just before you start sending your Username.

As for your original question, I don't really know, sorry.

Terry

"When the game is over, the Kings & the Pawns all go in the same box." -Old

> in a lesson of USA history was it was the catachre&#65533;sation
> of the mark "0 killed" for "no casualties today" during the
> secession war...

> But this war never existed at all!

Yes it did... if my suspicions are correct, they would be referencing the United States Civil War, 1861-1865.

The Confederate States of America 'seceded' from the USA over political differences, one of the main differences was the morality of owning peoples of other races to use as slaves.

As to the accuracy of the history of "OK" I cannot help there.

HTH,
Roger "Merch" Merchberger

I don't want to start a "who's got the most add-ons on their ZX81"
thread, but...

A couple of years back I decided to rehouse my STFM: A bit of hacking,
soldering, chopping, and lifting of PCB tracks which had to be patched
over with ultra-delicate soldering led to...

520 STFM (originally) in a 19" rack unit, 3U high with 2 floppy drives
mounted in the fascia. There were also a selection of 12 illuminated
buttons and switches to cover the power supply additions (keyswitch,
On & Off which operated 3 contactors to switch the (external) hard
drive & printer on, then the monitor and computer after a 0-15 second
(variable) delay), as well as the various MIDI routings (I'm coming
onto that later), the high speed serial port mod, the autoswitch
overscan, the dual TOS board and the High/Low res selection.

As the unit was intended for MIDI use (with Logic), I removed the
cartridge & MIDI ports, relocating the latter on the front & back
(with a switch to choose between them, so that I could quickly patch
things in without removing the case from my rack, if necessary), and
relocating the former inside the case. There was enough room
internally to add Unitor and the Log 3 dongle, giving a total of 10
MIDI sockets brought out to the rear panel, plus Unitor's SMPTE synch
connections. I also added a Human Touch for audio triggering of the
MIDI, which was mounted on the front using an extension lead to the
Unitor.

While I was at it, I tapped off an audio output from the modulator,
and added a SIMM motherboard for 4 megs. It eventually fell over when
I added a T28 as well, and it's now sitting under my bed waiting for
me to get round to sorting it out.

It looked _superb_ - but tended to scare people a bit if I lifted the lid. You know what it's like; the electrician's house is always the one with the most dodgy wiring, because he knows what he can get away with ;)

I've been meaning to do an article on it for some time, but as I've (currently) not got a camera, getting photos of it is more hassle than I can be bothered with.

Cheers,

Xav

(Disclaimer: I am a professional electronic engineer; don't try this at home kids)

OK - well, according to my learned sources, the first time 'OK' appeared in print was in 1839 in the Boston Morning Post as a jocular abbreviation of Andrew Jackson's 'oll korrect', and it seems like at the time there was a fashion for such abbreviations eg. RTBS ('remains to be seen') etc.,. In 1840 Van Buren formed his Democratic OK Club to support his election campaign, and OK has remained part of the language ever since.

A theory also suggests it could have been an telegraphic abbreviation of 'open key' - in addition to all the other suggestions mentioned here already!

Ken,

I've never had this particular problem, but I have had DEII mess up my partitions when optimizing. It seems there is a limit to the amount of data that the program is prepared to shuttle around on a partition (perhaps a percentage of available room??). Anyway, I would never optimize my disc without first doing a full backup - which sorta started this thread in the first place, didn't it.

For the record, I use ST ZIP to archive everything on each of my partitions, to a second hard disk. Time consuming, but effective.

FYI, I had emailed Oregon Research twice about this in the last couple of weeks, and haven't received a response either! You know, I always felt that they were pretty responsive until now.. but that no longer seems to be the case, and it's too bad, because I own several of their products and have been pretty happy with them (Diamond Edge, for example). Those of us who use Atari's to do our serious work need a company that we can count on.. I hope at some point we will be able to count on Oregon Research once again.

Hello, everyone I would like to apologize for being such a dums ass these past few days. I am a type of person that does not care about anyone or anything. And since I live in the USofA I think I'm greater and more powerful than anyone in this newsgroup. As you can see I just like to ramble on about anything and everything. I just dont like ICD because I can't figure out what the hell ICD stands for and this just drives me crazy. I have just purchased a Monitor and a Catbox from ICD. I'm hoping this helps them stay alive in the Atari business and gives them hope that even a shithead like me will still buy products from them even after flamming them.

Thanks to everyone that wrote back and beat the hell out of me I am sorry for all the trouble that I have caused. I will now leave this newsgroup and never again wite a message here.

NEWSwatch version 1.20 is now available at my web site.

NEWSwatch works with STiK and allows sending/receiving of Usenet news
articles for use in Oasis1.3/Snews and Oasis2.

This version should be used in place of 1.00 ASAP, as it fixes a couple of
major bugs that are present in that version.

Regards,
Gary

Sorry, that was bad phrasing from my part. My point was that there will be a lot of cross-posting, and "cross-reading", on both newsgroups that will increase the general volume of usenet traffic without increasing content. Ok, it will make finding specific info easier, but what about all the subjects that are will be cross posted: newbie questions, internet questions, OS issues (MagiC and MiNT), etc...

The way it is now, 'st' stands for 'sixteen-thirty-two' which happens to be name of the first 16/32bit computer from Atari, but also engulfs all the stuff that followed : STE, TT, Falcon and clones, which are all, whetever you say, improved versions of the good old ST.

>

Yes, I understand what you mean. I just don't like the idea of having
everything split into tiny application specific groups. Especially if
you also have your .falcon and .st (and why not .tt and .medusa too)
groups too.

I mean the current traffic is approx 50 posts on good days. If we manage
to redirect the 'for sale' posts to a marketplace group, we can probably
reduce traffic to 30-40 posts max. I don't beleive this is unbearable.

> > platform than internet. I'm afraid that the mass of internet related

>

A more appropriate renaming could be something like comp.sys.atari.tos.*
or comp.sys.atari.16-32bit.*, with st, falcon, tt, clones (if you insist
on the platform specific groups), internet, marketplace, programming.
However these have no real meaning for the larger public?

> > I'm not sure what the use is of splitting falcon and st newsgroups. They

> newsgroups
> as the are _not_ specialised enough. Just look at the MiNT mailinglist.
> It get much more mails per month than c.s.a.tech can ever dream about.
>

In that case, we need comp.sys.atari.mint ! When the volume of a mailing
list is too high it is usually acceptable to propose a newsgroup. But in
that case, what about MagiC and Linux for example ?

Why not go for comp.sys.atari.st.replacement-os or something. Any ideas?

<rest of message snipped because I globally agree with Magnus>

what I would agree to would be more like this (with the acceptance that
'st' includes all machines based on the 16/32bit architecture)

comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.st.programming

comp.sys.atari.st.advocacy
comp.sys.atari.st.internet *new*
comp.sys.atari.st.marketplace *new*
and maybe
comp.sys.atari.st.mint (or whatever) *new*

In this case, there is no risky renaming with all confusion that may occur, just plain newgroups that would be more likely to propagate naturally. The announce group can just disappear into the limbo.

Ya know I don't what country some of you morons come from (france, bosnia, whatever) but, I'll tell you something right now -The country I come from (the US) has something called a constitution and in it I am guaranteed the right to express my opinion. And I don't give a damn whether or not you like my opinion cause you've shown here that you are a couple of self serving, full-of-yourself, idiots who don't deserve to be given the time of day.

GET THIS THRU YOUR LAME ASS SKULLS: Advice is just that: ADVICE. You can take it or leave it. In the case of ICD though I think anyone who deals with them right now is a fool. But, you have the right to be a fool. And I think you have used that right quite fully here lately.

So I'll let you know right now: I am going to post REGULAR WARNING regarding this company here until I feel that they have stopped ripping people off who I care about. And if you don't like that then go climb a tree and suck your thumb cause I am not going to stop. anymore than those who post other things of related interest here (whether you think it is meaningful of not!) should stop.
-Who the hell died and made you the GODs of comp.sys.atari.st!!!
GET OVER IT!

Or even better, why not make a DIY for Atari Computing on how to install
your Falcon, ST in a PC MAxi-Tower? THAT would be very interresting
indeed
and I think many many people would find it very usefull as well.

I'm still thinking of doing it my self even though I have got a
Lighthouse
Tower, I just havn't got the time. I bet that there are a few hundred
out
there who is thinking the same.

Titan Designs in UK sells the MK.X case, but incase you want a big tower,
which is designed for Falcon use check Digital Data Deicke's web
page, in case they still have the Big tower in their catalogue:

http://members.aol.com/digitaldd/index.htm

They are in Germany, but the case is a big tower with a back panel designed to
fit falcon...so not so many hours of diy work.

no.sp@m.com did rant to All ... here's the result...

Hiya no.sp@m.com....

ns> Organization: none
ns>
ns>
ns> In my opinion they are scamming people on mail orders. I heard
ns> another report from someone who said they were ripped off by them
ns> today.

Hmmmm, my opinion is unbias however, a mate of mine brought the ICD ADSpeeD STe accellerator from the U.S, it arrived here in the U.K. less than 2 weeks later?.....are you sure ICD arn't just behind on their orders?, also, computer errors to happend from time to time, whenever anything is ordered it should be sent registered post/proof of posting etc. [I'm not sure what the US equivilent is], that was it's possible to take any complaints to the trade governing body [whoever they may be].

I'm Mr.Paranoid, I'll NEVER send anything, cash, cheques or otherwise unless I can PROVE the recipient will recieve it!

Even when readers of ST+ [my Atari diskmag here in the UK] request back issue's, I reccommend they send their orders recorded delivery, that way they KNOW i've recieved it, a little money spent on this sort of thing can save a fortune, I know it shouldn't have to be this way but it IS! :((

Also, these 'ripped off people' /might/ have sent cash....I know from experiance that the postal services around the globe tend to employ some 'less than' desirable employee's, money is easily 'lost' if sent by traditional means :((

I'd think VERY carefully before slandering ICD!, they can proably afford good lawyers, it may be your opinion but posting it in a worldwide newsgroup is NOT the place to express it unless you expect some comeback :)))

Have you been in touch with ICD themselves?......you might be supprised :))

I don't know what problems you've had with DBII, but I just got thru
restoreing some disks that I'd backup up my HD last year prior to a HD
crash, I'd about given up on ever having many of these files again,
since nearly all the BBS's that I'd d/led from are long since history.
It worked great for me. I have had to go to the last disk and let it
catalog items before I think, but as long as you have all the disks,
I've never had a problem with DBII or DBIII and wish they made a IBM
version, I'd use it also.

Mike

Hi Phreakozoid

I don't know what all the fuss is about. I'm sure that if I would have
posted warnings concerning System Solutions, they would not have had
the new Toronado flown in yesterday to my private airport. If I would
have spoken bad about ASH, my Turbo Carrea wouldn't be in the garage
right now. And I surely would not have posted anything bad about Toad.
I wouldn't want to give up the dinner date with Jennifer (pun intended
here:). If I wouldn't have lost the film of my San Diego Zoo trip
three years ago, I would have some nice pictures of a monkey
installing a processor card in an Eagle TT clone. My truck makes a
weird sound when I rev it past 7K RPM. I don't understand???? My sons
BMX frame is still at the platers after 3 months, which we left there
on our beach trip over the Fourth of July. We really went to see the
Monkeys on my birthday on the 5th however as they were at the San
Diego County Fair that evening. Gad, is Davy Jones small:). Micky is
still pretty cool. The frame was suppose to have been powder coated
black. Man, and I thought I had to wait a long time for my A/B:). Poor
kid is having fits. He called the Chamber of Commerce in Escondido to
complain. I don't think he has posted it here yet however.

My girlfriends sisters daughter is staying at her
mothers (the sisters daughters grandmothers). That really pisses her off. She thinks her old room is still hers. I have to listen to it all the time. What is worse, we had to put her horse down a few months ago and now she has taken up with a Dachshund. The damn thing has to go everywhere. It's kind of cute, but it pisses all over me when I pick it up. Which reminds me that I am still pissed because one of my Falcons died a while back. I have a new 32Mhz gull leg CPU that I am going to install this winter for a fun project, after I fit the extra Nemesis to my TT. The Germans flew in a Tornado a few months ago for signature measurements over the "Lake". I got to take care of the fuel and LOX farm and towing. It was a lot of fun until the Afterburner quit on the day they were to leave. Had to work all sorts of overtime until the damn hydraulic lines were replaced. One of the lines got clogged. Gesh, what a month. And not one of them ever used an Atari. I mean the flight times was really boring with the ground crew. In the end, Werner, Steffen, Peter and I went to Scooners. I fed one of the ground crew some TABASCO and he though I was crazy. We drank beer and sang German "drinking" songs. It was fun, and the German Air Force paid for it all. I stuck an Atari Fuji decal on the side of the aircraft for good measure.

What this boils down to is that ICD had not charged my credit card for the V7 of their ICD SCSI PRO software as of yet and it has been three months since I ordered.
Moral of the story: Use a credit card and don't get screwed.

SUBJ: Need a BJ-10ex driver for "1st Word+"

In a message of <29.09.97>, hall@post1.com (90:102/0.99) writes:
h> Has anyone got a 1st Word plus printer driver for the Canon BJ-
h> 10ex inkjet printer? Prefferably one with the correct character
h> translation codes so all the Atari characters can be used.

There was a driver for the original Canon BJ-10e (/not/ -10ex) version
on the V3.20 maintenance release disk. It included all the Atari
characters (some in dot-graphics format, which only work properly at
normal pica size) except for ASCII 180/1 (oe, OE), 194-220 (Hebrew),
222 (Caret), 236 (contour integral) and 249 (superior bullet). I
don't know if it will work with the 10ex, but you could always put it
through CFGALYSE.PRG, edit the resulting .HEX file and convert it
back to .CFG with INSTALL.PRG.

If you haven't got it, I could probably send it to you Mimed or UUEd -
providing this is possible via the Internet.

Regards
Peter

Well, I did try it once, and it is very bad. Not at all as good as Sebra
that does the same thing the other way round (hi-res emulator for RGB
screens). It is so sloooow, and makes the display barely readable by
dithering colors.

It's far better to use a TV set if you can for the occasional game or
need for colour.

Dont know what your problem is but I have been using DB 3.5x for ages on
a TT MagiC and a Mega STe for never any problems backing up data or
restoring if in doubt about operations of DB then RTFM.

They claim to be still developing it... Well, that's what they said in a
post on fr.comp.sys.atari yesterday. However they also said they have
lost 'FTP access' so the latest beta updates have not been distributed.
OxO hasn't had a very constant communication policy for some reason.

IMO, to lose 'FTP access' (whatever they meant by that) is bad news for
a company that is supposed to be developing an internet client !

I'll try to keep you guys informed of what's happening in France... if
developers themselves don't do it!

I find it difficult to believe that ICD has intentionally scammed anyone. I have found them to be altogether honest and above board in their dealings. Tom Harker of ICD even went out to a store that was local to them and bought an EZ135 drive to ship t
o me at no markup cause I couldn't find one locally. Please give them a break, they are one of the few remaining Atari supporters.

Well, just be wise and get it from whoever has the best price (even ICD) but,
if you deal with these guys (ICD) I would strongly recommend doing it COD. Or
at the very least use a major credit card that way you will only be
inconvienenced and not robbed if worse comes to worse.

That's my opinion.

I did that and Magic wouldn't read magx.inf at all. Then I remembered I used a WP that probably strips trailing spaces. So I wiped Magic from the HD and reinstalled. Guess what, those same 2 lines were stuck together again, before I even ran Magic. So I used Everest to edit it and it seems to be working fine now.

Agreed. My wife finds this from the Oxford English Dictionary.
She also says we should find the article by A.W. Reed, in the journal
"American Speech" XXXVIII (1963).
This apparently scotches many of the derivations purported in this ng,
and a few others no one has yet suggested....

I don't really know but I have read somewhere that we will not be
affected by this problem. And I decided to try it out so reset my
date to 01.01.01 which presumably will be the date first Jan. 2001.
(don't ask why I chose 2001)
Now when I display a newly created file in Kobold I get 01.01101 ?
which is odd because the same file displayed on the desktop window
(magxdesk) is displayed correctly as 01.01.01 Soooo it would seem,
since nothing has crashed, that we will survive another millenium.

Unless anyone knows differently :-))

By this do you mean that you do not have dmirror.prg in your auto folder or just that the statement is nonesense? I have a copy of dmirror in my auto folder and, strangely enough, one in my EDGE folder also, however this works and once a week my partitions are dependable mirrored. I have to admit though every time I've tried to reinstall a partition using mirrors it goes horribly wrong. It's useful for undeletes though :-)

I use a stock (old) Falcon 030 with NVDI4 and MagiC 4.

Ian Forrester skribis:

>I am getting a little woried about my Atari STe.
>A simple problem which faces all computer users,
>the millenium date bug!

>Does anyone know if this will effect TOS based machines?

I've tested my setup and the system itself seems to handle dates after
1999 without problems.

>Will there be any software which will not run after 2000?

Protext (wordprocessor) has some problems with its internal date
variables. Protext doesn't know about 29/2/2000. And it's difficult to set
the date from within Protext if it's after 1999.

S-Back complains about dates after Y2K if you try to set it from within
S-back, but the program nevertheless handles such dates perfectly.

>Will the clock reset to 1 jan 1900 or to some other date?

Nope.

>This is SERIOUS problem which we start taking action on NOW!

I agree. Has anyone else tested any TOS software for Y2K?

Ok, currently I am using a 14.4 modem and have the connect setting
in Stik set at 19200. Are you saying that I would get better results
if I changed the setting to 56000?

J > ISDN modems works just fine on Ataris.
Apologies for my ignorance!

J > Currently I have my Falcon permanently connected to the 'net vi
J > nullmodem-cable. I'm running ppp with MiNTnet.
Pardon my ignorance, but does this nullmodem cable just plug into
the serial port? It sounds like you are "mainlining" yourself into
the university's system. Is that about right?

> ISDN-modems :-) You should ditch the PowerUp though, it doesn't
J > compared to Nemesis.
I've considered that. Does Nemesis fit into where PowerUp is? Will I
be able to get my Falcon case closed after? (I mean, is it big?)

Does anyone have any idea if Nemesis is Cubase Audio friendly?

Roughly how much faster will the Nemesis make the Falcon?

Thanks for your answers here and in future posts :^)

> I use a stock (old) Falcon 030 with NVDI4 and MagiC 4.

Sorry. I really should more clear!
I have DMirror.prg in my auto folder and can see it run when I boot up.
But Edge reports that there is no Dmirror.prg in the auto folder when I
try to configure DMirror from within Edge. I too have a copy of DMirror
in
my auto folder, and in my DiamondEdge folder, part of the installation
process I guess. Just damn irritating really, DEdge2 with its version of
DMirror worked (and work) just fine.
Have you ever tried to change your configuration of DMirror so that it,
for example, mirrors on every boot up? or only once a day? or have you
stayed with the same config for a while?

: Atari TT won't read it off the disk. When he was using Windows 3.01 I
: had no problems getting files of the Floppy. Someone told me that there
: is a VFAT format that is being used by Windows 95 and MagiC is able to
: read the Win95 floppy.

: Is there any other programs that can read the Win95 floppy and is it
: true that MagiC can read Windows 95 Floppies?

Windows 95 is missing several abilities of 3.1 or 3.11. Win95 can read 82
track 10 sector Atari disks, because it had to for the disk distribution,
and for the first time ever followed the Microsoft Boot Sector Standard,
and actually reads the disk in the drive. Did not know that my TT cannot
read what it formats, when it can read what I format.

k> any Atari drivers for it?

I am using one (shared between the Falcon and Mac) using NVDI Epson Stylus drivers only, it won't use the 14400dpi settings that are possible, but it will print at 720dpi.

k> We use That's Write Three, Timeworks Publisher and now we have
k> Calamus. We have an Atari STE with 4 Megabytes of RAM and an almost
k> empty 720Mbyte hard disk.

I know Calamus uses it's own printer drivers, and Timeworks can use SpeedoGDOS IIRC ... provided they could manage a STYLUS driver then you should at least get some output from it, if not the best though.

In a message of <29.09.97>, Akanthos@matrix.kapatel.gr (90:102/0.99) writes:
A> Is there any program available for drawing electrical circuits?
A> I want it to be ST compatible.

Do you mean printed circuit layouts or schematics? For the first I can
recommend Scooter-PCB which is available in German from the author
HKahlert@aol.com for around 100 DM, or I can supply an English-language
version for 53.50 UKPounds post-paid - or a demo which does everything but
save for 4 International Reply Coupons.
If you mean schematic diagrams, there are the German PD ED_CREAT.PRG, and
Schaltplan, which were in the old ST-Computer disk library and may be
available from the FaST Club.

169. SCSI termination on TT and Mega STE

Newsgroup: comp.sys.atari.st
Date: 1997-10-03 00:00:00 UTC
From: Alyre Chiasson <alyre.chiasson@fundp.ac.be>
Message-ID: <613df2$ugi@hermes.fundp.ac.be>
Source record: 115863

If I connect more than one SCSI device off of a MEGA Ste via a LINK II (the internal adapter has failed) do all devices require removal of terminators? By example, I add a Syquest in addition to the internal drive and to that I add a SCSI flatbed scanner. Is this the same on the TT SCSI port or does the final item in the chain have to be terminated and all others removed (true SCSI)?

Thanks for your help.

Alyre Chiasson

Perhaps because BBS downloads are a lot faster. I get annoyed seeing
my phone bill increase while my modem is idle and I-net is timesharing
me with everybody else.

Seriously though, I reckon phone cos. should have a special tariff for
I-net connection (about 30% of normal rate at a guess) or should bill
for active time only. Unless they do this they have an incentive to
allow telecomms lines to become overcrowded.

KnifeST contains a utility that allows you to copy one FAT over the
other. Usually only FAT2 is used in Ataris, so it may be worth trying
to copy FAT1 over FAT2 , but as Hallvard suggests, make a sector-copy
first (using something like A-copy, though I am not sure this works
with HD disks) and work only on the copy. KnifeST can also recover
deleted files, but I'm not sure this will work if the /directory/
(rather than the FAT) is damaged. If they are text files, you could
recover them by viewing them sector by sector with KnifeST and using
its 'build' function, checking as you go that the next sector is the
correct one from the sense of the words. This won't work with
binaries for obvious reasons...

Isn't there a program that will let you run st low and medium on a
mono monitor? It fools TOS into thinking it's running in st low
and the program fix the output to make it readable on a mono screen.
I think it's called something like colouremulator. I don't know how
good it is though and I guess it slows down the computer a bit but
it could be worth a try.

I would like a group for other machines than the st. Maybe
c.s.a.hardware

> I mean the current traffic is approx 50 posts on good days. If we manage
> to redirect the 'for sale' posts to a marketplace group, we can probably
> reduce traffic to 30-40 posts max. I don't beleive this is unbearable.

Ofcourse it isn't, but I do also belive that more specialized groups
could
stimulate people to ask more and discuss more things. I guess I must be
living in a dream world full of Atari computers and nice poeple. :-)

> > The main problem is that people keep to mailinglists insteed of

I don't think there is a mailinglist for MagiC. For Linux I don't think
there is a need for a ATari specific area as the 68k does the job I
guess.

> Why not go for comp.sys.atari.st.replacement-os or something. Any ideas?

c.s.a.os.tos
c.s.a.os.mint
c.s.a.os.magic

> <rest of message snipped because I globally agree with Magnus>

> and maybe
> comp.sys.atari.st.mint (or whatever) *new*

Maybe better c.s.a.os.mint and .magic. Mint should atleast be there.
I'm not sure the "st" should be in there either, but I guess it's a
matter of tast.

Also a c.s.a.games could be very usefull as there are some list
about that to adn it could be a good way to inform people of what
is going on.

> In this case, there is no risky renaming with all confusion that may
> occur, just plain newgroups that would be more likely to propagate
> naturally. The announce group can just disappear into the limbo.

Yes.

The main problem as I see it is still all these mailinglists and I think
it will be very hard to make people use the newsgroups insteed of the
mailinglists.

But atleast the 3 you listed above as new would be a good start.
So lets try to get them going! :-)

: be able to get my Falcon case closed after? (I mean, is it big?)

You can fit the Nemesis into the standard case. My Falcon looks the same
as it ever did, from the outside ;-)

: Does anyone have any idea if Nemesis is Cubase Audio friendly?

Haven't tested this myself, but it is supposed to be. If you ever have
any problem with a particular program, Nemesis can be easily
temporarily disabled. I've never had to do this.

: Roughly how much faster will the Nemesis make the Falcon?

Should end up exactly half-again faster (150% of original speed).

Fonty edits Calamus fonts; you have to use another package (eg Fontkit) to generate GDOS bitmap fonts from Calamus fonts. However, Fonty also comes with a utility which will convert Speedo fonts to Calamus. You have to be running Speedo to use it, though, it won't work with NVDI (at least it wouldn't when I tried it). My guess is that it gets around the encryption etc by getting Speedo to draw the characters and somehow saving the results into a Calamus font.

I have *TONS* of games including 2 CD's full of stuff I got from a guy in Europe. I have everything ever dreamed of for the ST/TT/Falcon, but there are always gaps to fill. Lets trade, I'll send you my list for yours, if you don't have a lot of cool stuff to trade or just want to comment or leech then don't you dare respond or I'll whomp you upside your head with a nerf ball. Thanks. E-Mail me if interested. -Satcom2

P.S. I will give you whatever you want for the following: Tonic Tile, Gauntlet (original), Alien Thing, Arnorath, Pac Attak, Battle Bowls, Pixie and Dixie. I also have lots of used ST/STe games for sale in boxes, some like new, including Sheer Agony, Street Fighter II, Sleeping Gods Lie, War in Middle Earth and lots more. If you have anything at all rare or unusual for sale or trade for the ST/STe/Falcon let me know also.

Once again talking alot of crap. Since it looks like your in Los
Angeles area and you want to threaten me with words why dont you come
meet me face to face so that I can kick the shit out of you like I would
do to any other idiot that wants to talk his trash. BE A MAN COME TALK
YOUR TRASH WITH ME FACE TO FACE.... Since all of the writings Ive seen
of yours are always talking trash I figure that you wont even want to
meet me face to face. Hell Ill even make it a safe place for you. How
about on the corner of Vignes and Bauchet in Los Angeles this the corner
of the Los Angeles County Jail. This way you will be surrounded by LA
County Sheriff for your own protection. I bet all the veggies you
eat,and all the music you play has depleated your brain cells. BTW,
dont give me no cannon fodder bullshit. What are you going to do to my
computer fill up its 720k dd or fill up my mail box with a bunch of crap
please dont even try I dont use my isp mail box any ways so have fun.
Forgot to tell you what time to meet me lets make it about 11:30am this
way I can kick your ass and still make it to church at noon. Theres 4
phone booths on the corner there youll know who I am when you see me in
my ATARI T-shirt, green pants,black boots, I also have a fairly close
shaven head I may have a few other work friends there to watch me kick

the crap out of you. Dont worry they will protect you....

Don

Wow, Cool! <looks around, wide eyed in wonderment>

Atarieees on the internet :)

Please don't take this the wrong way, I don't mean to be patronising.
But can you actually use your ST's to log on here? Or are you all
using PC's?

I only ask because I was one of those who got sick of waiting for
Falcon & bought an A**ga 1200 instead <ducks>. I've never regretted
it, but I still have a soft spot for the ST.

The thing is... the old 16bit Amiga's aren't able to connect to the
'net. So it would be pretty impressive if the 16bit ST's could :)

What kind of software do you have? How does it compare to Netscape
etc..?

Someone mentioned an ST magazine. Where can I get it???

Phew! So many questions.. Guess I'll just lurk here a while & pick up
any scraps of information that get thrown my way. Then maybe I'll
check those classified ads & pick myself up an Atariee of my own!

Cya,

Oh, are there any good Atari sites?

From: t.poling2@genie.com
Message-ID: <611qej$ilj@rock101.genie.net>
Source record: 115935

Greetings....

I have a PC buddy that put a TIF file on a floppy using Windows 95. My Atari TT won't read it off the disk. When he was using Windows 3.01 I had no problems getting files of the Floppy. Someone told me that there is a VFAT format that is being used by Windows 95 and MagiC is able to read the Win95 floppy.

Is there any other programs that can read the Win95 floppy and is it true that MagiC can read Windows 95 Floppies?

Anyone considering ordering from these people may want to peruse
the thread titled 'Emulator game CDs from the UK' in
comp.sys.sinclair recently. You can see it via Dejanews
[www.dejanews.com] and you'll soon see what sort of people these
'Rocketship' lot are and why you probably would not want to risk
sending money to them. It may also be worth doing a Dejanews
author profile on 'Rocketship' in the comp.sys.sinclair
newsgroup to see what type of people they are.

Anyone is welcome to contact me directly for copies of the
correspondence I have received from them both via direct email
and on the c.s.s. newsgroup.

FOR SALE Toad Chameleon System
Although it's not an Atari computer it can be, sort of, if you install
'Gemulator', Atari MEGA STE Emulator for the PC. ** BEST OFFER Takes
this System.**

Following system for sale. In excellent condition with lots of
updated equipment I added to original system configuration. All
hardware is working and configured in the system. Good all around
clean system.
Here are the specifications:

TOAD Computers Chameleon System-Severna Park, Maryland-Place of
Origin.

CPU-Intel Pentium 133 Mhz-socket 7 with heatsink and fan

32 MG. Ram

256K cache

1.2 GB Hard Drive

Matrox Mystique 2D-3D Video Card with 4 Mg. Ram(nice 3D Card)

SoundBlaster AWE 32 soundcard upgraded to AWE 64 via Creative Software-
-WaveSynth/WG- CD included(upgrades AWE32 to AWE64 compatible)-
-comes with 8 MG memory on board - 4 MG SIMMS X 2(30 pin)
Sound good? ;^)

ZOOM K56FLEX Fax Modem-Internal-Model 2819 PnP
rated in the top by CNET

8X Speed Creative CD drive

Eagle 96 Exabyte Tape Backup System(internal) with excellerator
board(installed) and 4 backup tapes 1.6 GB uncompressed 3.2 GB
compressed per tape--(4 Tapes Included-Verbatim MC3020 EXTRA)

1.44 Floppy drive

Spacewalker HOT-541 Motherboard-INCLUDES- VRM Module so you can put an
MMX CPU in it. Upgrade to MMX in the future if you like
.
(Motherboard Spec's:Intel PCISET, Memory-up to 128MB, 246KB cache-up
to 512K, 32-bit PCI bus slot x 4, 16-bit ISA bus slot x4, 2-channel
PCI IDE port, supports up to 4 IDE devices, one floppy port, one
parallel port-SPP/EPP/ECP, 2 serial ports-(more info at
www.shuttlegroup.com)

VRM-HOT 106 voltage regulating module 553/MMX Power Regulator-installs in motherboard next to CPU-plugs-in. (module not installed in motherboard yet since Pentium 133 CPU does not require it.)

Windows 95 Keyboard

Joystick

Microphone (external)

Speakers-under monitor-3 speaker-A-B mixing-"headphone jack"-RCA phone jack inputs.

Beetle Mouse-serial 3 button mouse

Windows 95 CD & PLUS!-Installed * Encarta 96* MicroSoft Works* Microsoft
Money-CD's included.

Tower case-16.75" long 13.5" high 6.75" wide

Nice all around system---**BEST OFFER** + Shipping. US & Canada ONLY!!

System shipped insured via UPS if possible
System is in A-1 condition. NO IRQ CONFLICTS.
Been selling stuff on-line for a couple
of years now.- references supplied upon request.

Of course it depends on which game. I find after an hour of Quake my
Amiga is just too exhausted to log on, but Duke Nukem & Command &
Conquer, No Problem.

What's that?

Oh, sorry I forgot.. You can't play /any/ of those games on your Atari
can you?? :p

Cya,
:)

I think my defenitions of libel and slander for starters are correct,
they are the defenitions I have heared quoted by several people and are
also the defenitions given by my Psion's dictionary, the Concise
Columbia Encyclopeda and my Infopedia CD.

> For

> Opinion.

I know the difference, I am simply staying that trying to point you that
by prefixing your allegations by "I think", "I have heared" etc then
that is going to give you little protection.

> If you do you will realise you have done nothing but, made a ass of yourself.

That is for others to judge, looking at if from where I'm sitting, it's
not me that most people think of as teh ass, it's you Mr Spammer.

I think my Lighthouse Tower came with everything except the keyboard
kit which was supplied seperately, to allow you to choose. I got,
what I think is called Free-keys, basically a plastic case to fit the
Falcon's normal keyboard into and a cable to connect it to the
tower.

Rich.

(a lot of stuff clipped)

ORE, if I remember correctly, only offers a limited time phone support of their products. For extended support, they have a fee for service. I don't know if that is still in operation. One of the problems they have is Atari equipment. They only have a TT for testing. So when something dosen't work right on say the Falcon, I think they have do a little spit shine on their code. I think that if your using ICD Pro V6.5.5 with partitions compatible with TOS 2.06, you won't have problems with their software. Until V6.0 of HD Driver, I too lost some data, but I finally decided it was the way my drives were setup. Most of OREs disk software closely follows ICDs software. Uwe and others have pointed out that this driver is slightly dated and problems do exist. I know that I have the same problems with OREs stuff as I do with ICDs on the Afterburner. Some features just don't function properly.
I'm sure they have as much difficulty programming for XHDI complient systems using HD Driver or SCSI Tool as us users have in getting the latest versions:). Throw in AHDI and some non-standard partition setup on a 1gig drive and your asking for trouble:).
Anyway, on any platform, keep some form of back-up. I whined the first time I lost a gigs worth of data. It did teach me a lesson however. Golden Atari rule. Get Kobold, get an EZ drive and get milk:).

All IMHO.
Mike

Anyone know if one of the cheaper color scanners that plug into Mac and PC's will work on my MegaSTE?? I want to be able to scan at low rez (72, 75 - up to 150 dpi) for use for school projects (transparancies) and my web pages. Also, software for the different scanners?

I am getting tired of forking over money to Kinko's for use of their scanner and Mac platform - gets expensive after awhile.

Thanks,
John Norton

> Has anyone tried Linux on a Falcon or TT? I've been wanting to get a
> Falcon just for this purpose, and to try running a Quake server on it.
> (Or maybe even Quake itself!)

If you only want to run Linux, I believe TT is a better choice than
Falcon. I have Falcon myself, and I run almost only Linux on it
nowadays. To be frank, it's not very fast, but I like the environment
better than TOS. Running X is not very nice on a regular Falcon,
especially not if you want more than two colours.
There isn't much Falcon specific in Linux, so far. The improved
resolution settings is supported, and the 16-bit sound. We in NoCrew
has developed a device driver that lets the user make use of the DSP
too, and our mp2 player works well in Linux. (I'm currently working on
an mp3 player too, but it wont be done in a while)

About Quake, I have no idea how much power you'd need from a computer
to run the server, but I think the game itself would be VERY
slow. Quake on PC's uses the svgalib, a graphical library that doesn't
use X, which makes graphics fast enough on PC's for it. Linux on
Atari/Amiga has no equivalence, not enough developed anyhow.

I may have sounded negative about Linux here, I'm really not, I like
it very much. I should, since I use it every day. :)

Greetings,

Tomas

-> trade. Thank you. -Satcom2

YES it is possible to hook up a 1 gig hard drive to your Falcon.
However It's not a good idea to steal power from it. I popped the
little zener diode on the power supply trying to do just that. The
cable you need is a standard 50 pin SCSI II to a 50 pin Centronics
style. I have a 1.3 gig HP Coyote hard drive connected to my Falcon.
It's the very same one I had connected to my 520 ST. I use ICD
Utilities to format the unit instead of the hard disk utilities that
came on the Language diskettes. That way I can format maximum
partitions of 500 megs. Anyway everything's nice now with my Falcon and
my hard drives (except I wish to install a 1.4 gig internal 2.5 inch IDE
hard drive soon). Now it's time for me to switch over to the Intel
processor so I can load Windows 3.1 and play solitaire.

BYE!
James

Mike Kerslake said regarding the Japanese meanings of ATARI...

P > So where does my game move thing come into it then? Must be
P > something do with the "in this vicinity" bit maybe?

Now, we move into the less verifiable realm :^) I have been told
that ATARI can also be used in Japanese to mean something like "I
win!" or maybe it is like shouting "BINGO" (although I never saw a
bingo hall in Japan, evidence of a superior culture :^})

Wait a minute, I found it in another dictionary so we can move back
to verifiable territory!
In the Sanseido Gem Dictionary {English-Japanese, Japanese-English}
(what a coincidence, a _Gem_ dictionary has Atari in it)
Atari written with a different Japanese character (the language is
full of homonyms) has the meaning, "a hit, a successful play".
So there is your connection to games.

I lived there for several years and never once did I hear a Japanese
person use the word Atari in context of a game. There are other
Japanese words for "I win" that I heard lots of times.
I asked many of my Japanese aquaintances and none of them had heard
of Atari computers. Atari computers were never marketed in Japan
(and if they were, they never caught on) which is a bummer as I
really wish there was a Japanese writing program for the Atari.

... I wanted to be born again, but my mother said NO!

Can a month have passed already? Apparently so.

NEW FROM ROCKETSHIP:

Price cuts!

More specials!

New CD!

CD 8 - THE ARCADE COLLECTION

All the required ROMs, in the properly-named directories, for all the major multi-game and single-game arcade emulators, including MAME, System 16, KEM, MGE, RAGE and more. No more hunting, downloading, unzipping, renaming, and general mucking about - just drop the folders into your emulator directory and you're away. Over 500 ROM sets altogether. (Emulators not included).

Price:

UK £16
EC £20
Non-EC £24

STILL AVAILABLE:

CD 1 - THE 16-BIT COLLECTION

Games for the Amiga (400 approx) **NEW TITLES**
Games for the Atari ST (500 approx)
No ST list available yet, but ask about specific title(s).
Price: UK £22
EC £27
Non-EC £30

CD 2 - THE MEGA DRIVE COLLECTION

880 games. **NEW TITLES**
List available.
Price: UK £22
EC £27
Non-EC £30

CD 3 - THE SNES COLLECTION (1)

940 games.

All 8 CDs £132 - save £32 (EC £140, Non-EC £145)

For ordering details or more info, contact us at
rocketship@dial.pipex.com

Thank you for your attention.

NOTES:

1. All prices include Recorded Delivery within the UK, or Air Mail and International Recorded Delivery for overseas addresses. Delivery is within 14 days of receipt, to allow for cheque clearance etc.
2. All games are in emulator-compatible formats. (All files are also unzipped except C64, Mega Drive and SNES, so you can run games directly from the
CDs without having to take up hundreds of Mb of hard drive space.)
3. Particular games may not work on current versions of emulators.
4. This is solely a back-up service for legitimate owners of the software included on these CDs. If you do not own an original copy of any of the games, you are expressly forbidden by copyright law to make ANY use of the copies of those games on the CDs. So don't do it.
5. Rocketship Services accepts no responsibility whatsoever for illegal or inappropriate use of the contents of these CDs.
6. No emulators are included on the CDs.
7. The prices listed above are to cover the costs of raw materials, equipment, time and secure postage. If you think they're excessive or profiteering, feel free to try doing it yourself cheaper.
8. It is the opinion of Rocketship Services that all the formats and titles listed
above are commercially dead, and that the sale of these CDs imposes no financial loss on the copyright holders. No correspondence on this subject will be entered into.
9. Any order of CD(s) will be taken to imply full acceptance of these terms.

228. Need Replacement Phoenix II Files

Newsgroup: comp.sys.atari.st
Date: 1997-10-04 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6166cm$npj@news.Hawaii.Edu>
Source record: 115770

Greetings,

My Phoenix II (aka Xenomorph) object renderer has suddenly decided
to generate garbage. I decided that the program or associated files must
have become corrupt, but when I went back to the original diskette I found
that it was unreadable. The archive files PHOENIX.TOS, UTIL, and
RENDER_K.TOS will not copy or function. Unfortunately, Lexicor (the US
distributor for Phoenix) is no longer in business.

I would greatly appreciate it if anyone could e-mail me the files
from the original Phoenix II diskette (compressed into one file is fine).
I have the manuals so the copy protection can be handled on this end.

Also, if anyone has any idea where I might be able to purchase the
InShape Modeler, or has a copy for sale, I would be quite pleased to hear
from you. I get the feeling that the software company behind InShape is
gone now, but I would still like to purchase the program.

Please let me know if you can help with Phoenix II.

Aloha,
John Perez - jperez@hawaii.edu
Computer Specialist - Office of Information Systems

>But can you actually use your ST's to log on here? Or are you all
>using PC's?

I /used/ to use my Atari (until a few weeks ago, anyway) but my dad
told me to use the PC instead. :(Now I have to put up with a suicidal
operating system, software which continually locks up, and a complete
absence of speed. Come back, STiK, all is forgiven! :)

>The thing is... the old 16bit Amiga's aren't able to connect to the
>'net. So it would be pretty impressive if the 16bit ST's could :)

My ST dates from 1988, and cost a ginormous 300 quid then, yet it
still works on the Internet pretty quickly. WWW is a tad slow, but I
could always turn the pictures off... (vrooom!)

>What kind of software do you have? How does it compare to Netscape
>etc..?

STiK, CAB, NEWSie etc. See http://www.flinny.demon.co.uk/ for info.

>Oh, are there any good Atari sites?

Yup, lots. http://www.users.zetnet.co.uk/fujizone/ is a good starting
point.

Erm... not if you want to use Newsie as your newsreader, it isn't. And
Oasis is just too buggy for me to trust it, after it threw away some of
my e-mail without asking and before I'd read it.

Hehe, I've just been trying to get my old ST connected up and am having a few problems...! Just about managed to get the thing connected with STiK, but I can't get my telnet client or Crystal to work. Perhaps I need a more powerful system... (A HDD would be nice....)

>(currently) not got a camera, getting photos of it is more hassle than
>I can be bothered with.

Looks as though this thread is going to make a good article! A couple of
people have already promised photos and details of their cases, so if you
can throw something together and a couple of photos I would really be
grateful!

Kind regards
Mike Kerslake

Excellent, the definitive answer :-)

So where does my game move thing come into it then? Must be something to
do with the "in this vicinity" bit maybe?

>So does that make us all neighbours? :^]

If so, then you will have to pop round for a cup of tea! :-)

238. Good news about ICD...

Newsgroup: comp.sys.atari.st
Date: 1997-10-04 00:00:00 UTC
From: no.sp@m.com
Message-ID: <3436950c.9274992@news.flash.net>
Source record: 115800

I have a GOOD report regarding ICD... One of my friends (although neglected in the area of communication from ICD) did eventually get their order. They are still upset about the length of time it took and the fact that they received no replies to the inquieries but, atleast they don't feel ripped off.

I now believe that perhaps the problem with ICD lies in the area of poor management and not scamming. Best advice if you are going to deal with them is to use a credit card or COD so you have a buffer or recourse against such abuse.

-Just keeping those with enough common sense to take advice updated.

The rest of you can stick it...

ME

>indeed
>and I think many many people would find it very usefull as well.

Very true, but unless someone can donate us a suitable tower, we'll just
have to base the article on what people have achieved so far.

>I'm still thinking of doing it my self even though I have got a
>Lighthouse
>Tower, I just havn't got the time. I bet that there are a few hundred
>out
>there who is thinking the same.

I bottled it in the end and let Paul Rossiter fit out my Falcon into a
Desktopper. Perhaps it was just as well as he found potentially a very
dangerous design fault in the way the power switch supplied with the
Desktopper was meant to be installed. In certain circumstances the whole
case could have become live!

Kind regards
Mike Kerslake

IDIOT! The problem is that even though it works for you, it
doesn't work for him OR for me. The problem is that although part of the
sales price is the fact that there is supposed to be free support, which
has vanished! The problem is that the phone support line now only
gives a message that there is no more phone support, and to send e-mail.
The problem is that they don't answer e-mail. The problem is that they
don't even answer FAXes. The problem is that the fucking manual, which
I read from cover to cover, is full of errors. The problem is that I have
lost 200 Mb of non-replaceable Spectre stuff, which is what CompDirect
sold ME this bill of goods saying it would do. The problem is that they
don't even answer FAXes from CompDirect, who sell their shit!!! And
I'm not the guy who wrote the original post, so there is more than one
STUPID guy out there, who is having problems even with reading the
fucking manual.
Stop being a dumb wise-ass, Just because you are a fortunate user
who never had any problems, doesn't mean that someone else, with a
different system, with a different set of acc's loaded, etc. is stupid
because he can't get it to work. And I have a PhD in this shit. And was working on
computers since long before you were born.

Win95 uses extra FAT file entries for the long filename. TOS don't understand
this. What you can do is to startup Win95 in DOS mode (press F8 when
Win95 startup & select DOS) then it will not write LFN into the file entries.

```
1997 Atari Times Awards
-----------------------

In order to pay tribute to those people who have supported the Atari scene
over the last year, the Atari Times is launching the 1997 Atari Times
Awards...

Between 20th October and 1st December 1997 you'll be able to vote for your
favourite Atari things. This can be done via email or a form which will be
on the Atari Times homepage from 20th October.

Categories are currently being discussed between a number of large Atari
supporters and they will be posted in as many places as possible on (or
around) the 20th October.

More details will be posted here as they are confirmed, so make sure you
keep up to date...

Results will be published in the December issue of the Atari Times (UK).

Yes it is. Another solution would be for your pal to save the file to disk using the old DOS style 8+3 format. VFAT is only used for long file names.

Well, some are using Atari's, and other's are using PCs (I'm using a Mac
at the moment). Anyway, it is definitely possible to use an ST to get on
the net, at least for email, news and FTP. WWW is a bit slow an old ST.

I don't follow the Amiga stuff too closely, but they can definitely
access the net too. They have iBrowse, Termite TCP... ANd lots of them
are running Linux.

> What kind of software do you have? How does it compare to Netscape
> etc..?

Anything is better than Netscape. Netscape is web browser but is very
bad at FTP, news and email. If you just want to browse the web, fine.
But if you need something to communicate with you need a different
program for each application.

Atari has CAB for the Web, and Oasis or Newsie for news and email.

I beleive it has something to do with an exclamation you are supposed to
shout when you win at the japanese game of Go.

It is from the game of Go, alright, but it is a courtesy warning
one makes to an opponent when you place a stone next to his in order
to capture it. Hence "in the vicinity". The game had a large following
in intellectual circles in the US about the time tha first Atari games were
produced. Computer designers considered themselves intellectuals.
Hence, the NAME.

Yep, here we be...!

>Please don't take this the wrong way, I don't mean to be patronising.
>But can you actually use your ST's to log on here? Or are you all
>using PC's?

Yes, most of us are. I know I have nothing but Atari's in my home. (okay,
I do have an old A1000) :)

>I only ask because I was one of those who got sick of waiting for
>Falcon & bought an A**ga 1200 instead <ducks>. I've never regretted

The Falcon was well worth the wait...

>The thing is... the old 16bit Amiga's aren't able to connect to the
>'net. So it would be pretty impressive if the 16bit ST's could :)

Any Atari ST can hook up to the Internet, although 2 megs of Ram and a hard
drive definietly helps. There is also an easy/cheap modification that will
allow any ST to run with 28800 modems.

I know that its difficult to use older, unaccelerated Amiga's faster than
19200, but aside from that-why couldn't they connect up to the 'Net? I know
for a fact that there is at least twice as much Internet software for the
Amiga than for Atari... (I do realize that a newer version of Workbench is
needed, but you can upgrade just about any Amiga with that) Thanks...

>What kind of software do you have? How does it compare to Netscape
>etc..?

There is STik, STing, Mintnet with the CAB overlay...these are all TCP
layers. CAB (Crystal Atari Browser) is the defacto Web browser "standard"
and while it doesn't do everything Netscape does, it compares pretty well,
actually! There are several E-mail/newsreader/ftp programs available...

>Someone mentioned an ST magazine. Where can I get it???

Send E-mail to atari@teleport.com and speak to Rich about a subcription
to Atari Computing...

>Phew! So many questions.. Guess I'll just lurk here a while & pick up
>any scraps of information that get thrown my way. Then maybe I'll
>check those classified ads & pick myself up an Atariee of my own!

You won't regret it-but I highly recommend that you get a good used Mega
STe, Falcon or TT-030. They have most of what you will need already, and
are fairly easy to upgrade...Prices are really low, too! :)

>Oh, are there any good Atari sites?

Kazillions. Since you have 'Net access with your Amiga, just do a search on
Atari, and you'll be there awhile...! :)

Just beware of ST Formats 1st review-they eventually had to publish an
apology for it! :)

I have to agree, partly at least, with your "basic" statement regarding the
DeskTopper. It has a lot of potential because of its design, but I for one,
have had to do a lot of after-purchase hunting and buying for the various
cables 'n stuff I needed to hook up everything I wanted for it. There is a
kit that was supposed to allow you to do various things, like move your
floppy drive, reset button, speaker, power switch, etc, but I was told by
Toad Computers (whom I bought the DeskTopper from) that it was not going to
be available here in the U.S.... Personally, I couldn't understand the
concept of importing the DeskTopper, and not importing the accessory kit!

How 'bout you other Falcon owners? Did your Lighthouse Towers come with all
the needed cables n' stuff? Just asking so it might help the other Falcon
owners...! Later... :)

>Mike Kerslake

What power switch? Was that part of the accessory kit? I never got that with
mine, but eventually removed the on/off switch on the PS, and ran 2 wires,
extending its length out to the front of my DeskTopper.

So please tell me (in detail!) about the dangerous design fault! :)

The Microteck E3 is only about $150.00 now and the driver ScanX is
about $50.00. For that you can scan 24bit at 300dpi. Connects to the
SCSI port. You will have to have an ICD Link (II) to do this. Works
great, but without a graphics card, it is hard to see what you scan:).

Some of you may know Sergei of MIDIJAM, Kiev. He recently joined the st groups and subscribed to the Notator mail list.

A friend of his, Oleg, mailed me a couple of days ago to say he had died suddenly of a lung disease. Very sad news and a great shock. He was only 35.

He was a musician, MIDI-guru and Atarian. One of his missions was to set up appropriate BBS, home-page, mail-list resources for other Atari users in the CIS.

Just a few questions about my TT030 setup.
First, I recently bought Invision version 2 used and it seems
like a wonderful program. However, it doesn't like my
Nova card *sniff*. The weird thing is that it seems to
display the pallette fine but it does not disply
pics correctly. Another major problem is that
it does not recognize my TT ram so work is quite limited.
Anyone know if there is a patch for this?
Another question I have is about my Forget Me Clock II
which seems to not be keeping good time. Is there a way to
change the battery?
I would like recommendations on recasing the TT. Is there
a way to case the annoying Nova card inside as well?
I would like a tower.
My AtariWorks program (version 1.27) prints fine with the
spreadsheet but the word processor pushes everything
to the right. Fonts also seem ultra small. Anyone know
what might cause this? Other programs also print fine.
Thanks for any help. The TT is a great machine.
Of course, if anyone would want to trade a nice Falcon
for it.... you would get a working Nova card in the deal.

What you say is currently valid. It is, however, putting the cart before the horse, since "Okay" derives from "OK" and not vice-versa.

> Just a few questions about my TT030 setup.

Can't help you with info about the Nova Card, but Invision does have some problems with the TT. On my stock rev. J board machine, I can use it, but I have trouble with mouse clicking the various menu icons - either not being selected at all, or getting some multiple click problem reminiscent of the double scrolling bug so common to so many Ataris. The various fixes (.accs and auto folder programs) don't seem to affect this.

As for using TT ram, have you tried any of the programs that set the header bits in executible files to load into and use TT ram? There are a whole pile of TT fixes on the umich FTP site which include this kind of program (or .CPX).

> My AtariWorks program (version 1.27) prints fine with the

> to the right. Fonts also seem ultra small. Anyone know
> what might cause this?

Yep, it's AtariWorks. I SpeedoGdos for a while, and found that I always got a little half circle in the upper left corner of everything I printed, but that the margins were right. Upgrading to NVDI fixed the little character, but moved the margins over and down. I've found that I just had to rework my margins in all AtariWorks documents to Left 0.75 in., and Top 0.85 in. with a corresponding adjustment on the other sides. No other programs (Calamus or Papyrus) show this problem.

I've already expressed my opinion about this:

The falcon is an offspring of the original Atari. Most topics are common
to both 16/32 (=ST) machines, so such a split would probably result in
massive crossposting. Also, where would you direct discussion about the
TT or Hades ?

As for an internet specific newsgroup, this might be more valid. However
I feel a little bit uncomfortable about having application specific
newsgroups. Why not c.s.a.s.dtp or c.s.a.s.midi ? Technical issues about
connecting to the internet should probably be directed to c.s.a.s.tech.

The need to split newsgroups always results from a traffic problem.
Either the overall traffic is too large to conveniently fit in one
newsgroup, or one specific topic is taking up all the bandwidth,
diluting the rest of the newsgroup. IMO, neither of these are happening
in c.s.a.s.

I would be a lot more favorable of a c.s.a.s.marketplace newsgroup.
```

> If there isn't enough support, people WILL have to endure more
> STinG bug reports and Falcon DSP stuff over the ST newsgroup.
>

There's not that much DSP specific stuff ! Although I agree that the StiNG stuff is generating a lot of traffic, this might only be temporary. Actually, it seems to have decreased this week.

> If there is, then I would like as much help as possible for the
> submission and voting procedure. I have no clue how this is done.

I have clue about how it is done, and there are many people who probably don't give a damn about the Atari world that we need to convince, as it is all based on votes for or against a newsgroup charter, generated during an RFD (request for discussion). There is a FAQ somewhere about newsgroup creation.

I somehow doubt the Atari community has the influence left to generate enough votes. In any case, whatever the consensus that emerges from this newsgroup, I will surely support it.

Neither will ever happen IMHO.....Ages ago people with infinite more
knowledge on the subject tried to get a binaries group going for the
ATARI.. that basically got laughed out...
The best that could be done was to get an "alt" newsgroup going, and
this took ages to filter through and I beleive theres lots of people
still cant get it ? :(

> >I don't really think that there is that much traffic these days to warrant a

I agree

> >split like this, and its always a problem that some ISPs fail to pick up the
> >new newsgroups for some while.

If ever....c.s.a.st ect are well established newsgroups that have
been here for years.. getting ISP's such as education systems ect to
add another ATARI group or two would be nearly impossible.. and I get
the impresion a lot of ATARIans are accesing through uni accounts?

>It's not as much a question of traffic, as one of too many TCP
>stacks seeing bug reports over the main group. Also, given the

A Lot of people are peed off with seeing all the postings about "how"
to get internet access working with an ATARI.. when most reading have
so obviously got it working already, BUT the people with those
problems have a right to post them here and they are on topic..
something that can't be got around :)

Getting on the net with an ATARI machine and all its postings is a
specialist subject, but something that in time would have less
traffic, so to be honest I doubt you would get the newsgroup passed as
one of the criteria for starting one is a decent amount of postings in
the long term,

>Falcon is a rare beast with specific hardware widely different
>from the ST and TT, it DOES deserve a separate newsgroup, imho.

Unlike the internet access, a lot of people will want both groups.. I
have an STe but because of my hobby, the whole reason for using an
ATARI, I have to take an interest in the Falcon community as well,
plus why split us up.. LOTS of software works on both machines, lots
of problems arise that arnt Falcon specific, this would mean either

crossposting or splitting your audience in 2, not a good idea IMHO

>
>Others for/against this, please express yourself.

Just did...and if by some miracle you could start a new ATARI
newsgroup (and I find that doubtfull) then you would have no chance of
two, so if you can get one, then get the specialised net access, and
not Falcon as Falcon owners do need to talk to ST users and the other
way around..

>If there isn't enough support, people WILL have to endure more
>STinG bug reports and Falcon DSP stuff over the ST newsgroup.

arrrgh :)

>If there is, then I would like as much help as possible for the
>submission and voting procedure. I have no clue how this is done.

I havn't.. but I saw the process and joined the appropriate
newsgroups when Rich Tiejns (eeerm spello) got the ATARI Binaries
newsgroup going, it was a battle, but the fact that binaries shouldnt
be posted to newsgroups probably swung it.. plus Rich does hold some
respect in those quarters so they probably knew he wasnt just talking
bollocks?

On the one hand its dammned hard to get a newsgroup going... but some
people would say.. If "alt.useless.newsgroup" can do it then ??? :)

.

IIRC, I had the same problem a while ago, and the problem is that
you need to install gem_env (or something or other like that) as
an auto program. This tells Ghostscript where to find the proper files.
The method is in the documents, although well buried!!!
I don't have the docs here, but if you still are having problems,
write me and I'll try to figure out where or at least send you my setup.

Hoi,

They were at the Neuss fair indeed. I didn't spoke to then but from
what I've heard from a guy of AG-Comptertechnik they have take over
the development of N.AES. A new version should be ready soon.
So they are still supporting the Atari-platform.

286. TAF Meeting October 15th - HOMA demonstrations

Newsgroup: comp.sys.atari.st
Date: 1997-10-05 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3437970f.0@nemo.idirect.com>
Source record: 115689

Agenda for the meeting of the Toronto Atari Federation (TAF) for
the evening of October 15th, 1997:

we at TAF are proud to present an evening with Nima Montasser of HOMA
Systems House - and we're sure it's an evening you're not going to
forget!

HOMA is an Ottawa-based hardware and software house for
Atari-related products. Amongst their many products are software drivers
for popular brands of SCSI flatbed scanners (including Hewlett-Packard,
Mustek and Microtek), the NOVA graphics cards (for enhanced pallette and
resolutions for TTs, Falcons and STs), the PIXART graphics program for
designing your own artwork, and their CD software drivers for accessing
information off a number of popular PC CD-ROMs (including the INFOPEDIA
2, WORLD WAR 2 and BODYWORKS titles).

Nima has a full evening planned for demonstrations of his products,
and he'll also have them for sale at the meeting. So if you've ever
wondered how to get your Atari doing what PC and Macintosh users take
for granted, this meeting is for you! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third
Wednesday of the Month in the North York Memorial Community Hall on the
Lower (or Concourse) Level of the North York City Centre Library at 5110
Yonge St. at Parkhome Ave. Parking garage inside the complex. Those
using public transport can take the TTC's Yonge-University-Spadina line
to North York Centre Station. Meetings start 7:30 PM, $2.00 to
non-members. Membership is $35 CDN a year, and includes a subscription
to the club newsletter PHOENIX and full use of the TAF Online BBS.

The only thing you'll need to remember is that the floppies should
be formatted on the PC if you're using a TOS version prior to 1.4,
and to do that in Double Density...

The commercial version of CAB (v2.5) comes with a PPP connect package.
v2.5 plus goodies is around 30UKP.

I have used STiNG to make a PPP connection. Works OK but, on my set-up
at least, the performance is poor. You can get STiNG at Flinny's site.

If you are prepared to use MiNT as your operating system there are at
least 2 ways of getting PPP. Again try Flinny for the PPP stuff but
you may need to go somewhere else to get the MiNT kit.

: > using PC's?

But of course! In fact, I've even set my ST up as a file server on the internet before! Once had it working like an Xwindows dumb terminal as well.

The Falcon and TT really make nice net machines...I currently hook up to the net with My Falcon 030, and am working on setting up a proxy server through my PC so I can use both over one phone line at the same time :)

If you're a WWW junkie...the Atari will work on the web, but I have to confess that I went out and got a Pentium specificly for the WWW, as the WEB is now capable of so many new things like confrenceing, live video/audio streams, and the list goes on! Falcon's and TT's may be capable of many of the newer web technologies, but the software just isn't there (or is it?). I still do real work on my Falcon however, it's like my favorite pair of sneakers...comfy, and the scores of software I already have for it would take years and tons of cash to replace. Also, the Falcon runs circles around my Pentium box where CuBase Audio is concerned (not as many bells and whistles, but it works very well and the quality of output is much better!).

Sears quoted a price for me yesterday on a SCSI Mustek scanner...
Something like an EPIII Plus...
They were asking $200 or so for it.

The Parallel versions were only $149...but I don't think these'll work
with any of the Ataris.

These are legal size flat bed, 30 bit, lots of colors (sorry, I forget
how many) and I forget the resolution but it was well over 300dpi.

Homa Systems makes drivers for it.

Thanks Roger.

That's what I was thinking of!

You can tell that I'm really getting on now, can't remember what I learnt
yesterday.

Anyway thanks again Peter!

:-)

Kind regards
Mike Kerslake

IIRC you were supposed to move the old power switch to the front, and then
buy a kit with a new reset button on it (which I did). But according to
Paul, if you used the existing power switch at the front, then it could
touch the casing, which _could_ cause a problem. In the end he left the
existing power switch in place, and fitted a new, slightly differently
designed switch on the front which won't touch anything else.

I have to say that this problem probably won't happen if you install things
carefully, but he was concerned that due to the flexibility of plastic
things and thin metal sheet, there existed a potential to cause problems.

Basically, it was better to be safe and sure!

> So please tell me (in detail!) about the dangerous design fault! :)

Now get worried!

Yeah I read that review again the other night. The idiot writing the review said it would bring an aeroplane down! The following issue had a very strong letter from System Solutions in it, and an apology from STF!

> floppy drive, reset button, speaker, power switch, etc, but I was told by
> Toad Computers (whom I bought the DeskTopper from) that it was not going to
> be available here in the U.S.... Personally, I couldn't understand the
> concept of importing the DeskTopper, and not importing the accessory kit!

I got the case plus most of the extra bits from SysSol here in the UK. It was not cheap buying from them, but I got all what I needed. TBH, most of the extra stuff could have been bought from any decent computer/electronic spares shop, but I didn't really know what I needed, and as it was someone else that was going to do the fitting out for me, I didn't want to have to pay him extra money to do my shopping!

Kind regards
Mike Kerslake

>computers. If so how does one do it?
>
>-Tony-
>

FIRST, you must have a SCSI board for your PC! Then, you need a
driver for the PC. I presume that might come with the board.
Then it will work.

: >was wondering if anyone could tell me if there's a PPP connection
: >software out there for CAB and where and how to acquire such software.

You've got the horsepower! If you don't mind puzzles, go for Mint-Net, then again, if you're pretty well versed in unix, you'll have no problems setting it up.

There is a PPPkit distribution floating around the net someplace, that only installs the minimum parts of mint-net to get a PPP connection and use CAB and other STik based clients like Newsie. If someone here can point you to it...if not, I think I have it zipped away on my hard disk someplace, so email if you can't find it.

If you'd like a full blown multi-user unix set up, of which you can easily run your Multi-Tos GUI, or Geneva on top of, check out Kathrine's web page where she sponsors an English translation for the KGMD mint-net installation package. Her URL is http://www.primenet.com/~kellis

Mint-Net WORKS...no doubt about it...just know that it takes a little paitence and learning to set it up.

I have an Atari Lynx I for sale. This was one of the first
ones out (the color scheme is a little different than most.
It is in perfect condition and I have never experienced problems
with it.
Here are the goodies:
AC adapter, deluxe case, sun screen (yipee), Comlynx cable, Rampage,
Xenophone, Baseball Heroes, Switchblade II, Klax, Paperboy,
California Games, Rygar, Turbo Sub, APB, Power Factor, Awesome
Golf, Ninja Gaiden, Gates of Zendocon, Electrocop, Slime World,
Stun Runner, Checkered Flag, Viking Child, Scrapyard Dog,
NFL Football and certainly some others. Oh, Rampart, Steel Talons....
I am tring to do this from memory. If you are interested, let me
know, make me an offer, and I'll send a complete list.

"No correspondence on this subject will be entered into"? Well I'm
sorry, but that must be one of the most stupid things I've ever heard.

Who do you think you are, and why do you consider yourself to be above
the law? I don't think that the fact that "the sale of the CDs imposes
no financial loss on the copyright holders" is enough to justify your
actions. The problem here is that YOU make money off OTHER PEOPLES HARD
WORK.

Parasite.

Funny, last I heard, (and I hit the Amiga newsgroups occasionally because
I do own an Amiga also) Duke Nukem/Command & Conquer weren't available for
the Amiga. Feel feel to correct me if I'm wrong here...

There is a port of Quake for the Amiga. Its not officially released in
commercial form yet, is it? Also, my understanding is that its a little
slow, even on a 68060 equipped Amiga, and most Amiga's are not equipped
that way. You did say you had an A1200, right? :)

You also have to use BigDos8 in conjunction to HD6. I have swapped information from a PC to my TT AND from a Mac to my TT this way without a problem.
BTW another poster mentions something about getting a scsi board for the IBM... this has nothing to do with this, unless the IBM doesn't already have a ZIP drive.

I sent that message oops!

319. To all about ICD Mesage ..

Newsgroup: comp.sys.atari.st
Date: 1997-10-05 00:00:00 UTC
From: none <dons@qnet.com>
Message-ID: <3437F965.5ACE@qnet.com>
Source record: 115722

So sp@m cant take a joke so what. Life is to short for everyone to take all mesages seriously this is why I wrote the message ICD. I am in no way no.sp@m.com but, hell everyone I mailed it to thought it was funny hell I thought it was funny. Since I do live in the good ol' USofA I beleive (which Im entitled to) that funny is a excellent way to break up the B.S. of everday life. I see that ME does not think the same way but, hey he lives in the USofA also so if he dont find it funny I apologize to him for my message in this newsgroup I left under his ID. As for MEs threats to myself and to my internet usage who cares if anyone really cared about threats like this the internet would be a wasteland for nothing. If you (ME)find it really necessary to destroy my internet vessel have at it Ill tell you like Ive told everyone else I love my 12yr old ST and if you can destroy it by using the internet go ahead I have another in the garage that works just as well and as for my internet connection hell money talks to ISP's and I can always go back to the good ol'FIDO NET it may be slow but, its fun as hell to use a BBS. Seems that I may have got hot headed later on as the message went on but, again that is my fault. I was not following my own advice. So that gives me(dons) a big kick in the ass for getting carried away with the whole thing. So life goes on and if you arent laughing at em laugh with em. As for my Address and phone number I have posted it here hundreds of time here on UseNET,FIDO,and many others. I have had people call me for questions about there ST this does not bother me what so ever because I know that the majority of the people who use UseNET or this ATARI ST area a very honest,kind,intelligent, and very helpful Atarians or interneters.Sorry for using INTEL in that previous word had no choice. I think we all at some point have left our addresses and/or phone numbers here or elsewhere. If we didnt who would anyone call on the phone or send a letter to for help. As far as I know not everyone has Internet or access to some kind of online service thats why we have left our numbers for others to find to give to someone they know that is in need of help. And the voice phone call sure the hell is alot faster and easier to use than the internet so I dont mind people calling me for help with their ST.

In closing To all that my one message my have offended try laughing once you may like it hell you may do it more often. And to anyone who needs talk Atari my phone number is the same as the last 27 years hell I'm still living in the same place for 27 years sound like I should move I may try Castaic theres a nice little lake there I'm told but, if I only had a water craft besides my rubber ducky. Also would like to say that ICD is a damn great company. I have personally bought items from them for ages without a problem. Hope everyone will start laughing once again in this news group once you read this letter that took me 2hrs to

write since I only have 2 typing fingers.

Thanks for your time,

Don
dons@qnet.com
Donald Schoengarth
and many others that I have used and still
use to spread laughter.

BTW,

My phone number has not changed but, if you call me you will be charged $7.99 for the first minute and $9.99 for every minute after the first minute. This line will connect you to The Doggy Dropping Recycler. They have excellent Doggy Dropping recycling tips. The minimum call is 15 minutes,charges are billed directly to your phone bill as "DDR" . Hang-ups are billed $7.99. So before calling have paper and pencil ready. NEW TIPS EVERY DAY. We also offer call back at a flat rate of $200.00 also billed to your phone bill. WARNING WARNING WARNING DO NOT CALL UNLESS YOU WANT TO BE BILLED...Must be 18 or have parents permission to call. There is no backing out of the call once you here the voice..LOL LOL

I recently got email from Tom Harker the very day I sent off copies
of ME:MORON'S brain droppings off to ICD. He seems quite surprised by
the behaviour, and says that while they do make mistakes regarding
orders (to which they try their best to rectify), they certainly do not
rip people off. BTW, I've met Tom Harker (at ACE '95, when he came up to
demonstrate the Catbox) and found him to be quite a knowledgable and
affable person.

Two days ago a musician phoned me at home (my day off) and asked
where and how to get a drive together for his Mega4 (his Megafile
having died). I had no qualms at giving them ICD's phone number or
recommending the Link II to him, as well as numbers for the other two
dealers I knew of.

the best thing I'd recommend - the Microtek E3 SCSI flatbed scanner.
TAF's secretary is setting this up with his ST for use with his parent's
business, and I'm hoping to have one by this Christmas. It's up to 2400
dpi colour scanning, and incredibly cheap (some computer stores in
Toronto sell this for $250 CDN). HOMA's SCAN-X software works with this
and the E-6 (you can get it direct from HOMA or from Systems for
Tomorrow).

If you're in Toronto on the 15th of this month, Nima Montasser will
be demonstrating SCAN-X, the NOVA card and other of HOMA's products at
TAF's October meeting (announcement tomorrow).

From: tross3@hamtel.tds.net
Message-ID: <617jfs$lm@news2.tds.net>
Source record: 115727

Just wanted to thank the people that have taken the time to offer comments and suggestions on my site, and give notification that some changes have been made.

-The overall format is a little different, and should be easier to read.
-Since it is the "Atari" Reference Desk, I am compiling information for _all_ Atari computers (except the Atari PC)... 6502, 680xx & Portfolio.
-Guestbook is up now (however, I haven't been able to link to it - Not quite sure what the problem is, I tried 4 other Geocities sites with guestbooks, and was told the server didn't like my request on any of them - might be CAB, or it might be a temporary problem with Geocities).
-The 'Author Information Form' has been modified somewhat.
and a few other minor changes.

Have had a few people post queries on the "What ever happened to..." page - So, if anyone has any info on Alan Alda (that was meant as a joke, but they asked <shrug>), Tom Hudson, or Colleen & Candy (were they real people, or just names), I'd appreciate it if you stopped by & let us all know.

Terry

Oooh! whose slightly mad then?

Really, despite any perceived agravation, is there any need for this
level of irritation? Seems despite the PhD and Professorship (?) someone
is a little light on their ability to express cogently.

Guess whose likely to draw fire now?

PS: No need to come back on the "I was in computing before you were
born, lark". I expect our ages are similar, if you can remember
reading desert warefare action in the daily newspapers against
Rommel.

You can thank Newsie for that. It intercepts clipboard actions from
other apps and makes it think the text is ready to be shipped...;-/

>I guess something is going wrong with your attempt to install "Ghostcript"?

I have the basic package (gs3xx.zoo) unpacked. It constantly
refuses to find its configuration files, and therefore gives
me an error, even before it started interpretting the file I
passed it from CAB. It then reports an error code and exits.

I need this to work, to read some specifications form the Zilog
homepage. Everything technical is in .PDF Acrobat.

It's not as much a question of traffic, as one of too many TCP
stacks seeing bug reports over the main group. Also, given the
Falcon is a rare beast with specific hardware widely different
from the ST and TT, it DOES deserve a separate newsgroup, imho.

Others for/against this, please express yourself.

If there isn't enough support, people WILL have to endure more
STinG bug reports and Falcon DSP stuff over the ST newsgroup.

If there is, then I would like as much help as possible for the
submission and voting procedure. I have no clue how this is done.

The FirstWord + program comes with a printer driver creater, as well as
ascii files of the drivers that came with it. You can edit one of the
existing files or create your own driver with the auxillary program.

SUBJ: 2000 and onwards?

In a message of <04.10.97>, Ian Forrester (90:102/0.99) writes:
IF> I am getting a little woried about my Atari STe.
IF> A simple problem which faces all computer users,
IF> the millenium date bug!
IF>
IF> Does anyone know if this will effect TOS based machines?

This was discussed some time ago on Cix. The general opinion ws that the Atari itself is OK. It measures the date in days from the TOS creation date and will continue without problems after 2000.

IF> Will there be any software which will not run after 2000?

Yes, the setting of the FMC II cartridge clock for one does not work past 1999, though the clock itself seems to run fine if you set it to the last minute of that year and keep it running. But how does one re-set it in the new millennium?
The Harlekin file selector won't accept dates starting with 20xx - the last two digits become : plus the final year number.
Some programs such as Home Accounts 2, for instance, won't accept input for anything after 1999. I guess there are many other such programs as well. Many databases may have sorting problems too.
In some cases one may be able to kludge this by using, say 1980 instead of 2000, but the days of the week will be wrong and there is /no/ year available where these would correspond. At least 1980 has the merit of being a leap year, like 2000 (yes it /is/!).

IF> Will the clock reset to 1 jan 1900 or to some other date?
No.

IF> Is there a patch program (Software/Hardware)?
Not as far as I know - don't think a universal one is possible and one would have to patch each application, I guess.

IF> This is SERIOUS problem which we start taking action on NOW!

Would be nice... but I fear you will have to insert the correct dates manually in most output. Problems will arise where a prog reads the date of existing files to see whether a later version should replace them - such as backup programs - and anything sorting in date order, also spread sheet calculations involving time intervals that span from before to after 1-1-2000. OLRs may also have problems with message threading etc.
Unfortunately I seriously doubt anyone will provide a fix for anything (except perhaps the latest programs still current) on the TOS platform - they

will have enough problems with Windoze... :-)

Regards
Peter

Well, as I intend to attempt just such an installation on my beloved Falcon in the near future (spot the deliberately vague timescale: it all depends on time and money, natch), I'll have a word with Joe about doing precisely that.

Cheers,

Xav

>me an error, even before it started interpretting the file I
>passed it from CAB. It then reports an error code and exits.

From the GhostScript package:

The binary distribution of the Atari release contains an executable,
the PostScript support files, the help files, and the default font
(Courier). GS searches for the support files in all directories
contained in the comma-separated list assigned to the GS_LIB
environment variable. The default value for GS_LIB is
".,f:\gs\help,f:\gs\ps,f:\gs,f:\gs\fonts". To avoid potential filename
conflicts, the path to the help files may be specified separately by
the GS_HELPDIR environment variable.

Setting the environment variable definitely worked here.

Hope it helps

From: stanley@stanley.wintermute.co.uk
Message-ID: <35828989_000014_OASIS_NEWS@stanley.wintermute.co.uk>
Source record: 115545

Can anyone help with this access problem, please?

1)
The North-East of Scotland's award-winning newspaper, the P&J,
that is: "Press & Journal", has a web site which refuses to send anything
but an error message because, it says, my software won't work with it.

I use CAB 2, which does use frames, so if anyone cares to try and access
the P&J and discover what's the problem. I'd be grateful.

URL is: http://www.pressandjournal.co.uk

Cheers,
Charles.

354. Re: Amazing modem speeds?

Newsgroup: comp.sys.atari.st
Date: 1997-10-06 00:00:00 UTC
From: Spencer@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk
Message-ID: <11855_Spencer@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk>
Source record: 115646

Out of the ether, the following was mentioned by
andrew.styrmo@bbs.trideja.com...:

a> bitching that they can't get more than 33K or 36K out of their 56K
a> modem) with ISDN modems not being able to work with Ataris. Or do
Thats not true. I've used a BT Ignition ISDN T/A on my TT with no problems at
all. It just acts as a normal modem (standard Hayes
command set) but rather than using the PSTN it uses ISDN (one or two 64K
channels depending upon your initialisation string). The only downer is that
its DTE is limited to 115.2K rather than the 153K the TT is capable of.

a> the Power [slightly] Up 2 accelerator, no Afterburner!) ? Right now
a> I am using a 14.4 modem but would like to upgrade. I just don't
a> want to spend more for power that I can't harness.
On the Falcon I use a USRobotics Courier V.34+ and normally get 28.8
connections everytime (I even manage to get 33.6 sometimes). But there is no
reason why the Falcon couldn't use the same ISDN T/A as above.

>Oooh! whose slightly mad then?

Yes, when your final comment that you didn't quote was RTFM!
Well, having STUDIED the manual, and finding it was simply wrong in
several places including saying that image backups could be made to
HDisks, when they can't, and losing 200 Mb of Spectre partition, and
getting no response from Oregon Research after months of calls, e-mails FAXes,
etc. I strongly resented you implication that the reason it didn't work
was simply that we hadn't read the manual.

>Really, despite any perceived agravation, is there any need for this

359. Few questions about HDs and ZIPs...

Newsgroup: comp.sys.atari.st
Date: 1997-10-06 00:00:00 UTC
From: Christopher Kmiec <ckmiec@concentric.net>
Message-ID: <3438D082.E4AE997D@concentric.net>
Source record: 115651

Hi,

I'm trying to get back to my ST days and I have some questions:

1. I have Megafile 30 and SH204 drives. The SH204 is just about to kick
the bucket (the noises it makes are really scary sometimes :)), and
I've heard somewere that it actually has a SCSI interface inside. So,
can I use the interface to hook up a ZIP drive? If not, what do I need?
And what software?

2. What drives can I replace my 30MB in Megafile 30 with?

3. Is there any way to hook up a 1.44Mb drive to an ST (Mega ST4)?

Thank you in advance...

Chris Kmiec

360. FS/T: Atari ST software [10/06/97]

Newsgroup: comp.sys.atari.st

From: vga2000@ix.netcom.com
Message-ID: <343bfe07.5394184@nntp.ix.netcom.com>
Source record: 115652

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 10/04/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 5.00 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 4.00 California Games (Epyx)
$ 4.00 Championship Wrestling (Epyx)
$ 4.00 Death Sword (Epyx)
$ 3.00 Devon Aire (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 3.00 Final Assault (Epyx)
$ 4.00 GFL Football (Gamestar)
$ 4.00 Impossible Mission 2 (Epyx)
$ 4.00 Karateka (Br0derbund)
$ 3.00 Lands of Havoc (Antic Software)
$ 4.00 Man Hunter: New York (Sierra)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 4.00 Metro Cross (U.S. Gold / Epyx)
$ 4.00 Paint Pro (Abacus Software)
$ 3.00 Prime Time (First Row)
$ 4.00 Quadralien (Spinnaker)
$ 4.00 Renegade (Taito)
$ 4.00 Space Quest: Chapter I (Sierra)
$ 3.50 Stunt Track Racer (Microplay)

$ 3.00 SwiftaR (Accustar)
$ 4.00 Techno Cop (U.S. Gold / Epyx)
$ 5.00 Warship (Strategic Simulations, Inc.)
$ 4.00 Winter Games (Epyx)
$ 4.00 World Games (Epyx)
$ 4.00 World Karate Championship (Epyx)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

Peace - Love - Harmony

Peace is something all of The Flower Children pray and hope for,
qnd pray some more.
We are here there and everywhere. Waiting, watching, and
marching the Mother Earth as warriors of Peace. There are
thousands and thousands, marching for Peace.
One day maybe the people of the Earth will realize that we are
all the same. Here on the Material plane, and will keep on
marching and marching here on the material plane. Chanting with
our eyes wide open, here on the Astral Plane.

Peace,

Atari user all the Way
Peace brothers and sisters

Can't you? I thought it went past the bottom if you page down? ANyway, I know there's a problem with the scrolling, but I use ST-Guide to view messages, so it doesn't apply.

> Oasis has'nt lost me as many e_mails as the 100 limit in Newsie has nor does
> it have the the same q_ing problems.

I didn't realise there was a 100 e-mail limit. That could be a pain. Although if it's like the 400 newsgroup article limit, it doesn't actually throw away the excess messages - just takes them out of the index. They're still on disk, and readable. It's a pain, but Oasis threw away one of my e-mails entirely, deleted the downloaded file and didn't put it into any mailbox, and I had no way of recovering it. Which even if it only happens once, is worse than anything Newsie's even done to me.

I haven't come across mail queueing problems in Newsie; there is the thing of it not updating the index file when posting Usenet articles, though, which is a bloody pain. Frankly, we just don't seem to have decent news and mail reading software on the Atari.

Since you're obviously using some sort of computer to post to the news
groups, it's only a short step to just download a terminal prog from
atari.archive There's a simple one called VanTerm stored in the
Telecomm directory.

It's only a simple matter to get files from your PC to an ST, just
format the floppy in the PC...

> And what software?

I doubt you could easily attach a ZIP drive to that old internal
interface. The ZIP requires parity, and I seriously doubt that the
interface handles it. There are hacks around that tell you how to
convert a non-parity interface to handle parity, but this might all be
pretty complicated.

>
> 2. What drives can I replace my 30MB in Megafile 30 with?

RLL drives if I recall (or MFM). Pretty hard to find these days (or in
bad shape as second hand). You might be better off replacing the
mechanism in the SH204 with a more modern SCSI drive on which you can
disable parity.

>
> 3. Is there any way to hook up a 1.44Mb drive to an ST (Mega ST4)?

Not that I actually care (I'm not much of a games player, so my Jag
and T2K suffice), for the sake of accuracy I believe there was a port
of Quake to the Falcon - just to prove it could be done. It wasn't
very fast, but as the person involved was Mr. Nemesis himself, it was
running on a machine with a Nemesis and Afterburner. That's all I know
about it, but it shows that all things are possible.

Cheers,

Xav

I believe (in fact I'm pretty damned certain) that Speedo has a
function call to convert a character to beziers. NVDI also has this
call AFAIK - or at least the later versions of Kandinsky can certainly
turn characters to beziers using NVDI on my machine.

If the Fonty utility doesn't work with NVDI, therefore, it would
probably be only a minor tweak to fix it. Of course, getting that
tweak made is another matter...

What you see is the <NOFRAMES> message for browsers not able to see
frames. If frames are on in CAB you should not see this. The site seems
completely normal. Try it with Lynx. If your ISP has Lynx 2.7 you'll get
this message + two links to the frames. (I just love Lynx!)

Points to a wrong IP address. I suppose you fetch the IP address via PPP, not
from a script ? Then your problem is most likely due to a bad bug that I just
fixed. Bugfix version on my web page in a few days.

Cheers Peter

> obviously I'm not (as well as a lot of others). Most TCP/IP stacks for
> PC's/Mac's have this option.

I'll elaborate on this first, but will take this as a chance to report
about progress on the PPP front. See below.

The Dialer supported SLIP first, which has no initial negotiation about
parameters, like PPP does. So the way a connection was established, was
dialing, working the script, and reporting the connection is there. There
is nothing more to do for SLIP. For PPP it worked pretty much the same,
but additionally the SERIAL code starts the PPP negotiation, which is not
done by the Dialer. The Dialer already reported "connected" at this stage,
which irritated many users when the negotiation actually failed and the
PPPs dropped the line.

I therefore revamped the connection procedure the Dialer performs, such,
that it waits now until the PPP negotiation is finished. It's not until
then that it reports success or failure now. This enabled the Dialer too
to save a initialisation log to disk, which contains the whole PPP dialog,
which will be invaluable for scrutinizing PPP bugs that I cannot reproduce
here due to the way my ISP works.

For all this to work you'll need a new SERIAL.STX and also a new kernel
(STING.PRG), which all will be available on my homepage in a few days.

> If anyone knows of a way to manually dial/logon and use STinG/ppp please

>
> Again, this is my ISP's advice, so don't shoot the messenger.:.:.:.

Actually this advice is fine for a script that is used to set up a SLIP
connection, but it's pretty useless for PPP. The PPP dialog is binary data,
no way you can log in manually via a terminal emulator.

What you can do however, is perform the initial script (if any) using a terminal emulator, and as soon as PPP is activated on the server's side, leave the emulator, and click the port active in the 'Port Setup' CPX. You must do that quickly of course, as the server's PPP won't wait for long. But this is pretty much the same as the Dialer does, and you won't get much additional information.

I should mention here too, that I found and fixed a couple of really bad bugs in the PPP code that prevented login for many people. Find the fixed code on my web page in a couple of days.

Cheers Peter

>> because the only word that comes to my mind is RIPOFF !

Sorry but you'll get no argument from me on that I agree entirely.Never the
less Oasis is still "in my opinion" the best net connect program if only for
the toolbox & mime toolbox & mime handling, The ability to view a picture
before deciding if you want to upack it is brilliant, using the toolbox to
copy/Kobold,Zip/zip.ttp& encode an e-mail all from within Oasis is the stuff
I like.no having to leave them copy/then zip/ the run esscode then go back &
do the e_mail. I even run CAB 2 from within the Oasis toolbox for offline
work.
Newsie is excellent & John has my utmost respect & thanks for all the help
& support he gives,Quite unlike the Oasis team who do'nt want to know,But
the truth is Newsie has away to go to catch up and I have no dought that it
will mean time I' continue to use them both.

Pete.

I really think you'd be better off doing a floppy upgrade. You can
easily install a PC 1.44M floppy drive mechanism inside your ST354. It
will work just like a standard Atari 720K floppy.

You'll need to perform a few minor modifications to the drive, but it's
certainly worth it.

Check out a good text file that describes the modification on an STF. It
should work in the same way on an external drive :
ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

Atari: TT or Falcon with HDDriver, BigDOS or MagiC
PC : SCSI-Adaptor

The best and fastes way to read your ZIP Media on a PC and your Atari.

Regards, Robert

385. DECDriver - Hades network driver

Newsgroup: comp.sys.atari.st
Date: 1997-10-06 00:00:00 UTC
From: fichti@REMOVE_IT.wvnet.at
Message-ID: <61a1u4$b2c@sioux.fr.internet.bosch.de>
Source record: 115677

Hi everyone!

I finished work on DECDriver V0.95 last weekend.
DECDriver V0.95 for ANS is a driver for PCI-Ethernetcards
on Hades 040/060 and is CARDWARE (nice postcard to register).
DECDriver supports the ANS (Atari Networking System) and
works together with the TCP/IP-Stack of TU vienna
(known as TUWTCP-package and is included in the DECDriver-
archive).

The current maximum transfer speed of DECDriver is above 1 MB/s !!!

DECDriver will be available in the next days on the
homepages of Medusa Computer Systems and Carasys.

Medusa Computer Systems
Homepage http://www.ee.ethz.ch/~caschwan/medusa.html

Carasys
Homepage http://www.carasys.de
or
Mailbox ++49 (0)681/9672911

The language of DECDriver itself is ENGLISH, but I'm sorry
because the current documentation is only available in GERMAN
at the moment. I will work on it. Maybe someone will help me ?

With DECDriver for ANS it would be also possible, to use other
stacks than TCP/IP (e.g. Novell, Pathworks,...)
Anyone interested to write a stack ?
Examples using the ANS-functions are included in the DECDriver-archive.

Now I am searching for Atarians who wants to do some work on the
existing TUWTCP-clients. Because they are not up to date regarding
User-Interface, ...

And because my lack of time I want to force the porting of
DECDriver for MiNT-Net (DEC_DRV.XIF). Many people are waiting
for it ;-) This version should be available by the end of the year.
Then I also plan a port for STinG (ETHER.STX).

Bye,
Markus

Yes, this is possible. You already have HDDRIVER so you only need to
install Big-DOS on your Falcon in order to read/write DOS compatible
partitions. Note, however, that for the Falcon MagiC 5 might be a better
choice than the current version of Big-DOS because Big-DOS version 8 is
known to be unstable on the Falcon.

That was meant to imply that he intends to swap the Zip drive,
not just the disks. If he has a Zip for the PC, fine! If not, and he wants
to use the SCSI Zip with the PC, THEN he needs a SCSI interface for the PC!
Parallel Zips don't work on the Atari. But the disks can be used with two
different drives.

Message-ID: <savetz-ya02408000R0610971128170001@news.northcoast.com>
Source record: 115684

I am trying to get my new (old) Atari 520 ST working, and have found that the old ST354 disk drives that I have won't read disks written to by a PC. All I need to do is get a terminal program to the ST so I can download other programs. But getting the terminal program there in the first place is the trouble.

I'm looking for someone to snail-mail me a single-sided ST-formatted disk with a terminal program, so that I can finally use my ST. I'll pay postage, of course. If you can help, please e-mail me.

I've seen requests like these for Atari and other classic platforms a million times. Someone should set up a cheap service that will snail mail "starter kits" to people who need them: boot disks, DOS and a terminal program to get people going.

Thanks,

I never owned a PC and hopefully I will never own one.

D> The thing is... the old 16bit Amiga's aren't able to connect to the
D> 'net. So it would be pretty impressive if the 16bit ST's could :)

They can since years - but it's easier now with a software called PPP-Connect.
But you can also use STiK (SLIP) or STiNG (SLIP/CSLIP/PPP). They're freeware.

D> What kind of software do you have? How does it compare to Netscape
D> etc..?

I use CAB+PPP-Connect. Don't expect the same quality you have with NetScape,
but IMHO it works great. It can handle frames for example.

D> Someone mentioned an ST magazine. Where can I get it???

There should be many ST magazines, depending on the country you live in.

394. To the person currently know as ME.

Newsgroup: comp.sys.atari.st
Date: 1997-10-07 00:00:00 UTC
From: Ian Daley <idaley@crestelec.com.au>
Message-ID: <34390c5f.0@139.134.5.33>
Source record: 115549

Dear Me,

I have been reading this newsgroup of late but never posted. I am amazed, however, as to how much bullshit you are capable of generating. It kind of reminds me of the "Hey can someone email me Photoshop 4.0" messages in the Photoshop groups.

As an Australian, I have a large body of water called the pacific to protect me. This is a lot more real, has far more substance and offers a lot more protection than your American Constitution, (not that I mean this as disrespect to Americans.. but what the heck.) Therefore I feel it is safe to say the following:

(1) You are what we Australians refer to as a Wanker.
(2) You are full of crap and akin to pestilence.
(3) Your understanding of the law, and all its flavours, is jack.
(4) You can come and get me anytime you want.
(5) Over here, we usually belt snot out of your kind before they reach puberty. (Which means in your case there is still time)

Others may feel free, and are encouraged, to add to this list.

You have been annoying me and the rest of the 'quiet' observers with your garbage for far too long. We all know its one of those posts done just to generate as much guff as one can, and then you sit back and revel in it. If you want to wallow in shit, go wallow in shit, and leave the rest of us alone.

Lets face it. You might not know it, but rest assured the rest of us do, you are a complete, and absolute 'knob-job'. Before you get all frustrated, remember, its okay to be a little different, and society accepts, and nurtures, these differences. Who knows, maybe you can take your skills of talking shit to a new level, maybe even become useful to society.

But until then... Fuck Off!

IJD

Source record: 115550

Greetings....

I was aimed at just switching ZIP Disks not the whole unit between Atari and PCs. I got Big-Dos 8 working (I think). I'm kind shakey when it comes to programs that mess with HD reading and wrighting so I backed up all my files on another HD (Fresh Backup).

I was able to write 1 partition to the Zip Drive at 96 megabytes. It shows up at a little more then 100,000k bytes from the Desktop Info selection. It's seems to work but........

Will the Zip Disk be readable from a PC's point of view?

I noticed a few selection on HDDRIVER6 and I was wondering if I have them right.

Formating...
Interleave:0
"Ignore current defect list" was unselected.

Partitioning...
DOS Sectors per track 32 was selected.
Heads 64
96 megabyte partition with "type" left blank.
Files in root directory:256

Does this look all right to be working on a PC?

-Tony-

But can a win95 format a 360k disk? Or even under that machine's DOS?
BTW I'd recommend Freeze Dried. The files necessary to run it will fit on
a 360k.

The last SCSI device on the cable should be terminated and the
terminating resistors disabled or removed in the other SCSI devices.
Also ensure that termpower is enabled on the last device.

regards

I have a couple of Degas (pi1) files that I want to print out on a HP Deskjet 500. As I can't find a printer driver for the printer, I was hoping I could find a program that will convert the file to .gif so I can print it out using my PC.

Suggestions as to programs (with URL to get it) appreciated.

From: willard@headwaters.com
Message-ID: <61dg1q$5sr$1@newsbell>
Source record: 115560

Greetings all;

I recently acquired STfax and have problems using PageStream 2.2 files
with it. The pages are basically unreadable. I first thought that
it might be because I use largely, postscript fonts but traditional
dot matrix fonts do the same thing.

Is this a resolution problem?

Is it a driver problem?

Any advice/drivers/help appreciated.

Regards,

Willard.

When people talk about new groups I often read this, "Then you must
read two groups", like it's a real problem. What is the problem to read
two newsgroups insteed of one and being able to sort them better and
being able to discard those groups that you doesn't want?

I think this is a realy strange attitude.

I just hope that someone finally takes up distribution of it in England (and English ;)

I got to play about with it a while back and thought it was absolutely excellent (_and_ it supports all the new AES objects and calls, which is more than can be said for MagiC after five incarnations!). Some really nice touches, such as the vanishing menu, the Win 95 style task bar and the shutdown and res change programs.

Of course, the only company left to take it up over here would probably be 16/32 as System Solutions have MagiC and Titan have Geneva. Still, if anyone hears anything definite about the new version, even if it has to be ordered from Germany, could they mail me or post something.

Cheers,

Xav

After buying quite a few computers i've accumulated duplicates of
these items so their up for sale. I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Golden Image Hand Scanner & Touch Up Software ..... $ 50
* Spectre 128 Mac Emulator ..... $ 25
* Spectre GCR Mac Emulator ..... $ 35
* Atari 1040/working but a few keys needs to be replaced . $ 15
* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* Monitor Switch Box ..... $ 5
* External Disk Drive ..... $ 25
* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10

Software: All With Manuals

* PC Ditto ..... $ 10
* Phasar Professional Home Accounting System ..... $ 10
* Dr T Midi Sequencing Software ..... $ 5
* Dr T Copyist Music Scoring Program ..... $ 5
* The Music Studio Midi Sequencing Software ..... $ 5
* Steinberg Sequencing Software w/cartage ..... $ 5
* Edit Plus Professional Editing Tool ..... $ 10
* Typesetter St ..... $ 10
* Stalker/Telecommunication Software ..... $ 20
* Steno/Text Editor ..... $ 10
* Straight Fax 2/Faxing Software ..... $ 30
* G+Plus ..... $ 10
* Migraph OCR/Optical Character Recognition Software ..... $ 10
* Mr Boston Official Bartender's Guide ..... $ 2
* Black & White Monitor ..... $ 35

Software/No Manuals:

* STAccounts/Integrated Accounting ..... $ 5

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10
* Elite/A Fantastic Voyage ..... $ 10
* Carrier Command/ Tactical Warfare ..... $ 10
* Defender Of The Crown/Knight Fight ..... $ 10

* Knightmare/Knight Fight ..... $ 10
* ShadowLands/Barbarian Fighting ..... $ 10
* Barbarian/Fighting ..... $ 10
* Lemmings/Maze and Building ..... $ 10
* Ultra V Warrior of Destiny/Knights ..... $ 10
* Baby Jo/Baby Super Hero ..... $ 10
* Drakkhen/Dragons ..... $ 10
* Gun Ship/Helicopter Fighter ..... $ 10
* The Pawn/Good and Evil Fight ..... $ 10
* Dragon Of Flame ..... $ 10
* Curse Of The Azure Bonds ..... $ 10
* Breach ..... $ 10
* Inside Brataccas ..... $ 10
* Star Fleet ..... $ 10
* Time Bandit ..... $ 10
* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5
* Rambo 3 ..... $ 5
* Lure Of The Temptess ..... $ 5
* Civilization/ 4 Disk ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25
* Atari ST Internals/The Authoritative Insider guide ..... $ 10
* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10
* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10
* Atari ST Application Programming ..... $ 10
* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3
* Easy Draw ..... $ 3

If there's something you're looking for and it's not on the list
let me know... I have 2 closets I haven't gotten to yet plus over
my motgher's house I have stuff. Willing to work on [ackage
prices. Buyer(s) pays postage!!

Opus works OK for me under mint (so long as you save a file right at
the start of what you are doing and don't use long filenames, etc but
I think that might be cured if I ever get nohog.acc?)

Leon L Robinson
Still running at 8MHz and proud

>I strongly resented you implication that the reason it didn't work
>was simply that we hadn't read the manual.

Did I state or imply you had not read the manual. I would certainly be biting lumps out of things if I lost 200 Mb.

I had a similar experience on a PC recently, which I found was down to my Windows floder being trashed (fairly unstable systems cf ST). This requred install of DOS, recovery of data files, then ful reformat and restore of a 4 Gb HD.

My only point was the public irritation and venom in your posting.

> You didn't answer the other points, or echo them.

I was not intending to comment. The points and stages explained I would agree about. Especially that on "exeryone's system is different". Mine is so old it needs a zimmer to support it running, over 10 years now. I do change software occasionally, but as little as possible. The machine does all I ask and remains stable.

It's no use, and they know it. I don't have the resources to take this to court, especially not in a foreign country... I've spoken to a former local Atari-dealer about this, and he has had lots of similar problems with German (and a Danish) companies. To this day he hasn't been able to get a dime from them :-(

> When did you ask for a multiboard? I thought it is out of run for long!

It is, that's why I was so happy when W&L claimed they still had them in stock! It's a cool (and cheap!) card, with IDE- and ISA-interface, and slots for TOS 2.06 and SIMMs. I have everything (IDE-disk, lots of SIMMs, 2.06-chips, NVDI ET4000...) except the Multiboard...

Please do so. I have sent mails to his Maus-address as well as to the W&L-address. Since ~20th August I have gotten absolutely *no* replies. The one I got then was after tons of mails to them, and only when I threatened to "go public" (I.e. what I have just done) I got a "the card is most definelately on it's way, please be patient"-reply. Since then, nothing. Nada. They still have my money and I still have no Multiboard.

> So stop this waste and get back to normal talking between human.

If you're referring to -ME-'s stupid babbling, please ignore him. The rest of us have been quite "normal" (If you can call Atarians "normal"...).

Hiyawl.....

Here's the index for ST= issue 21 to whet your appetites ;)))

ST+ ISSUE 21 INDEX OF FILES...

REGULARS

THIS ISSUE... - This index of files.

WELCOME AGAIN. - Yours truly's at the helm once more.

BACK ISSUE'S - Where and HOW to get 'em.

KONTACT KORNER - THE place to make new contacts.

ST+ STOCKISTS - Where else to get ST+.

WHERE TO WRITE - Our addresses.

OUR NEW SHELL - Info about this new shell.

NEWS

EUREKA! - New release.

FTP FILE LIST - All the latest FTP info.

US ATARI SHOW - It's not just the UK that holds Atari shows y'know ;))

THE SHOWS... - The up commin UK shows.

BIRMINGHAM - All the info on the brum show!.

LONDON - ..and the london one too :)

READER ADVERTS

WELCOME.... - An intro to this service.

MARTIN WILSON - Reader advert.

PHAT ASS NEV - Reader advert.

JOHN WELLER - Reader advert.

STEPHEN WILSON - Reader advert.

JODY SMITH - Reader advert.

PETER FENWICK - Reader advert.

READER REPLIES

PETE - Reader letter.

DEREK HUNT - Reader letter.

JOHN - Reader letter.

BUSY B - Reader letter.

MART's REPLY - Reader letter.

PETER FENWICK - Reader letter.

--- QUESTS ---

JOHN - Questionnaire

BARBARA - Questionnaire

PETER FENWICK - Questionnaire

CHEAT ZONE

HAD YER CHIPS - Game cheat!

DEJA VU 1 - Game cheat!

KINGS QUEST 2 - Game cheat!

POPULUS - Game cheat!

MORE CHEATIN' - Game cheat!

COMMS

POINT FAQ - All the point info you'll ever need.

GOING ON-LINE - Just what IS involved?..

MINT NET - Guide to Mint.

ATARINOS - Atarinos info.

NODE FAQ - As per point info but for becomming a Node.

PIETER - On-line letter.

DEREK HUNT - On-line letter

REVIEWS

UFOST ISSUE 2 - Lee rounds latest issue.

PROTEXT - WP review.

SOUND PLAYER - musix review.

ZERO-5 - Game review.

TREK MANUAL - Book review.

BATTLE MASTER - Game review.

DKB RAYTRACER - Software review.

MOUTHTRAP - Game review.

STR FIGHTER II - Game review.

STOS

EDITORIAL - Deano's bit!...

INVADERS TUT - Continuing the invaders tutorial.

PACIFIST - Is pacifist THAT good?....

STOS CODEING - More STOS help!.

STOSSER FEAT

STOSSER S/WARE - Advert.

HERO DIARY pt1 - How H.E.R.O.2 came to be.

HERO DIARY pt2 - Part 2 of the above.

FRONTIER

FRONTIER TIPS - Er, tips for Frontier?...

ELITE CHEAT - The original ELITE isn't left out.

MORE FRONTIPS - Um, more tips for Frontier?...

YET MORE... - Er, Oooo, even MORE tips for Frontier?...

THE BABIES... - Sonme of the little lads...

-- ART WORK --

VIPER LIGHT - A piccie by Pete....done a long time ago :))

COMMERCIAL ADVERTS

T.U.S. - Commercial advert.

ALIEN TECH - Commercial advert.

ANALOGIC - Commercial advert.

ATARI POOTING - Commercial advert.

FLOPPYSHOP - Commercial advert.

PHOTOSCAN - Commercial advert.

GASTEINER - Commercial advert.

GOODMANS INT - Commercial advert.

PROPHECY PDL - Commercial advert.

TITAN DESIGNS - Commercial advert.

A.S.P. - Commercial advert.

OTHER ADVERTS

ALL AT SEA BBS - Misc advert.

MAGGIE - Misc advert.

UFOst - Misc advert.

BBS SYSOPS - Misc advert.

ART GALLERY

POSSIBLE?... - Another logo design.

BEGINNERS

VIRII.. - Watch out, there's a virus about!.

NEWSIE HELP! - On-line help.

UNIX - UNIX guide.

WARNING! - Don't say we didn't warn you.

D.I.Y.

DISCLAIMER - VERY IMPORTANT!....

RESETTING - Altering the reset switch on your atari.

LOGICAL DRIVES - Adding logical drives.

DEMO'S

IS IT WORTH IT - Are demos worth the effort?...

PURE DEMONESS - Review.

USER GROUPS

S.H.A.G. - Advert.

USER GROUPS - List of current user groups.

N.A.G. - Advert.

W.R.A.G. - Advert.

-- REPORTS --

MANDY'S REPORT - The latest N.A.G. report by mandy!.

NAG RTA - Just what goes on at a user group meet, well, here's what WE get up to.

FALCON ZONE

EDITORIAL - Mart's bit.

BAD MOOD FAQ - All the info on this Falcon DOOM!.

LYNX

NFL FOOTY - Game review.

NINJA GAIDEN - Game review.

PAC LAND - Game review.

PAPERBOY - Game review.

PINBALL JAM - Game review.

QIX - Game review.

RAMPAGE - Game review.

RAMPART - Game review.

ROAD BLASTERS - Game review.

ROBOSQUASH - Game review.

FEATURES

EDITORIAL - Simons bit.

IT'S MY LIFE.. - A readers experiances.

COLLOSSUS - It' BIG!....

WORDS!... - Food for thought.

NOSTALIGIA - Yesteryears budget.

PRICE CHANGE? - To cost or not to cost.

A POEM - An ode to Atari.

FREE MAGS!! - Legally obtained.

NON ATARI

CONSOLE CORNER - Marts new bit.

10 PC USES - Nope, not a net grab of totally stupid idea's...in fact a readers
view :)

PENTIUM - The new 300MHz machine isn't far away now!.

TV TIME TUNNEL

WELCOME - Lee's Editorial

T.T.T.NEWS - News from the Tunnel.

STINGRAY - Do you remember?....

MORE RAY'S - You should do now :))

NEXT MONTH

ST+ 21 STATS! - All the info on this issue.

NEXT ISSUE - What's comming next?...

Hehehehehe.....that lot will keep you busy for a while ;))))

Please note however that ST+ is NOT availible from the usual GEOcities site due to the webmasters modem problems, got to:

http://www.airtime.co.uk/users/stosser

You'll find links to get issue 21 from there, thanks to !ynoT for that one :))

| adds.
|
| Good luck trying! I'll be waiting:).

Ah man, you're bringing me back out retirement for this! :-)
Ok, one last post then as ME (no.sp@m.com)... but, this is the last one.

You are obviously:

404on040@iwvisp.com (Michael Grove)

And the best I could do with the (rather strict) limitations you placed on ME was that you are in California and possibly either in the military (past or present) and/or maybe you're located somewhere near Ridgecrest.

Obviously I got nothing from the Finger but was I close otherwise (either the military or the location)? Just curious... They were educated guesses without making myself work too hard. Anyway, thanks for the challenge.

Take it EZ... and let me know my score :-).

ME (back into retirement)

431. Ram expansion

Newsgroup: comp.sys.atari.st

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Any one still out there?

I have been asked to look at an piece of history for someone who has an Atari 500 collecting dust, needs to do some assignments, and cannot afford to buy a computer.

This unit does basically work, but does not enough ram to run the word processor package that is with it. It is fitted with 512k. Looking inside, it appears I may be able to just fit the other four dram chips to make it into a 1meg machine.

Anyone know any reason why I cannot do this?

The plural of 'paradox' is 'paradise'.

There is no final decision yet concerning the distribution of HDDRIVER
as well as OUTSIDE by Computer Direct. But the way it looks Computer
Direct forces me to withdraw certain distribution rights.

Updated the Web page with more Information (Including a Screen shot)
of THINKER the current game project, A playable demo "should" be
available at the UK ATARI show in Birmingham on Oct 17th (Yes we will
be there)
If you have already read the game Information then please do read
again....Nothing is ever written in Stone you know :)
The actual web page has a small bit of redesigning, But still No
frames, NO heavy graphics yet colourful and ATARI Friendly :)

Thanks to Everyone for the feedback on H.E.R.O.2, Considering this
was just an update to the game, it has generated more response than
BillyBoy, Diamond Ice, Heartland and a few others total ?,

This does now make us think that 4Meg Ste/Falcon games are the way to
go ?...
However we are knocking together a Puzzle game in time for the shows
that should be FM Compatible upwards, with enhanced STe or Falcon
sound, :)

Work on the ST+ Diskmagazine shell has now totally stopped, The
editor is looking at HTML and I agree with him that this is probably
the best direction to take for full ATARI machine compatibility,
Unfortunately the pure volume of text every 4 weeks could cause a
problem when it comes to HTMLing them, But that's there problem
hehehe.... Anyway My programming involvement has stopped with the
Diskzine, although my 100% support of it continues:)

The url is http://www.airtime.co.uk/users/stosser
But if you have problems?..then try
http://www.airtime.co.uk/users/stosser/HOME.HTM

Well, besides the obvious answer of System Solutions, I notice that
Maplin are still advertising Atari mice in their catalogue. If you're
in a major city, they may well have a shop although this is the sort
of thing they might have to order from their central stores.

They also know knothing about Ataris, really. According to the
catalogue, "since, for these machines [Atari & Amiga], mouse operation
is most often software dependent, the mice are NOT supplied with
driver software, unlike those for a PC."

No awards for clear english there. It sounds to me like I need a
driver for each piece of software I've got. And there was me thinking
I could just plug the thing in ;)

Alternatively, just go to one of the forthcoming shows and pick one up
there.

Cheers,

Xav

Those who have been following the progress of the TOSBOX emulator project will want to read its news page. In hopes of spending a little less time answering email about the same topics, I'm starting to keep public notes on what features are being developed, what conflicts have been found, what bugfixes are finished or in the works, and the state of TOSBOX in general.

Please do continue the feedback though. It is all very helpful.

Sounds like a better Atari show at our B.A.V.E. meeting Sunday the
12th. Howard Warshaw will be there and possibly Don Thomas and Larry
Kaplan (Kaplan was at the last meeting). Not to mention having
Computer Space #1 and Pong #32 availible to play.

Tony R. Poling wrote:

> Will the Zip Disk be readable from a PC's point of view?

It will be readable if it was partitioned DOS compatible. Otherwise the
PC won't recognize the partitions.

> I noticed a few selection on HDDRIVER6 and I was wondering if I have
> them right.
>
> Formating...
> Interleave:0
> "Ignore current defect list" was unselected.

Formatting has nothing to do with TOS or DOS compatibility. It's the
partitioning that is important.

> Partitioning...
> DOS Sectors per track 32 was selected.
> Heads 64
> 96 megabyte partition with "type" left blank.
> Files in root directory:256
>
> Does this look all right to be working on a PC?

That depends on the SCSI adapter in your PC. The values for tracks and
heads must be exactly the values your SCSI adapter's BIOS supports.
Other values won't work except for the NCR/Symbios Logic BIOS which is
quite intelligent and flexible in this respect.

Just because a lot of users don't seem to know: The TTs internal drive
must always be terminated because this drive is one end of the SCSI
chain. The TT itself also has terminators. These have to be removed if
there is an internal drive _and_ external SCSI devices.

> So you might want to try again in a few days when the new code is available.

Just as a notice, but ASH is currently working on a complete internet
suite
called "Internet Office" and it will include an email client, news
client
and FTP client. It will use PPP-Connect which comes with CAB 2.5.

Not to bad and as ASH usually releases very good programs so I guess it
will
be a very good alternative to the STiK clients. It's also always good
with
competiton and I guess this will only make the other programs even
better.

Great news if you ask me. :-)

A question about DOITF030: Since one has to obtain the password to extract it, why bother allowing the file to be available from other sites? Would it not make more sense to make it available from only one website, and require the information online upfront, before downloading, and/or to set up a auto e-mail responder that sends a uuencoded or MIMEd file upon receipt of an e-mail with the appropriate info?

A funny thing is that for some reason, here in France, Primax Atari
3-button mice have been spotted in several places these last months,
although there have been no Atari mice available for years. I got a
spare one just in case the older one I've got goes belly up.

: Nova card *sniff*. The weird thing is that it seems to
: display the pallette fine but it does not disply
: pics correctly. Another major problem is that
: it does not recognize my TT ram so work is quite limited.
: Anyone know if there is a patch for this?

Hmm, perhaps you need to upgrade to a cleanly written graphics program.

: Another question I have is about my Forget Me Clock II
: which seems to not be keeping good time. Is there a way to
: change the battery?

I don't know, but if you have a TT you won't need the Forget Me Clock -
the TT has a battery-backed clock built in.

: I would like recommendations on recasing the TT. Is there
: a way to case the annoying Nova card inside as well?
: I would like a tower.

I think there are some special TT cases available, otherwise I guess you
could fit it into a standard full-size tower case.

Someone (I'm afraid I forget who it was) made a WWW page about his wooden
TT tower case. No doubt you'll find it if you search on the internet for
"WoodTTower."

Ian Forrester (dj_arush@adrenalin-online.demon.co.uk) wrote:
: Does anyone know if this will effect TOS based machines?

Yes and no. TOS itself is fine, but it will certainly affect some
software. Hopefully most programmers were sensible enough not to let this
affect their software, but I we can't rely on this :-(

: Will there be any software which will not run after 2000?

Definitely. Let's hope there is not too much important software like this.
No doubt modern software won't have this problem or will be updated so
that the problem is fixed. There will be no fixing old software, however.

: Will the clock reset to 1 jan 1900 or to some other date?

No.

: Is there a patch program (Software/Hardware)?

TOS itself is fine, so there is nothing to patch. The real problem is in
the application software, and it is impossible to make any generic patch
that fixes all software.

: This is SERIOUS problem which we start taking action on NOW!

I don't think it will be as serious as you might think. I set my date to
a year past 2000, and all the software I tried seemed to work fine. I
didn't look into it in detail, however, I just tried it out for half an
hour or so. There definitely will be problems, but I hope they won't be
very serious.

: service providers in my area offer SLIP (I found 1 to be exact) and I
: was wondering if anyone could tell me if there's a PPP connection
: software out there for CAB and where and how to acquire such software.

There are now a variety of solutions: MiNTNet, ASH-PPP Connect, and STING.

PPP-Connect is supposed to be easy to set up, but you have to pay for it.
PPP-Connect is supplied with CAB 2.5.

I use MiNTNet, which for my purposes is much better than any of the other
solutions. MiNTNet requires the MiNT kernal to operate, and perhaps is a
bit more difficult to set up. There is no question, however, that
MiNT/MiNTNet is far more powerful than the others. With MiNT you can set
up a complete multiuser UNIX-style system, letting other users log into
your machine, run HTTP, ftp, news servers etc. You can't do this any other
way (unless you use Linux or NetBSD or some other UNIX).

It just depends whether you actually need these extra features. OTOH, a
minimum MiNTNet installation with the PPP-Kit distribution is fairly
straight-forward and only uses a couple of megabytes of disc space.

: }: Is there any other programs that can read the Win95 floppy and is it
: }: true that MagiC can read Windows 95 Floppies?

You can read VFAT discs with TOS, but you won't get the long filenames.
MagiC does support VFAT, so that would be one solution. Unfortunately
there is not (yet) any VFAT driver for MiNT or TOS. The next best thing is
a program specifically for reading VFAT discs which can be found on Sven
Karlsson's WWW page. I don't have the URL available to me at present, but
there is a link to the page on my WWW page. The problem with this program
is that it can read only floppy discs - not hard discs.

Hi!
I too, just got a copy of STFAX v2.1. Now that TOAD is out of it,
and the e-mail addresses in the book get bounced, is there any more support
for it and is 2.1 the latest version???
I do have the manual.

Actually, you'll need a high-density 50-pin connector for the Falcon end.
You may have to take along the Falcon to your local computer shop to do a
little comparison.

What I have is a little connector that looks like a gender changer,
somewhat like those connectors to hook up a normal Atari monitor or a VGA
monitor. You'll then need another Centronics 50 pin to a regular 50 pin
cable. I've got one that has a male and a female connection. Very useful,
though they can be a little expensive, but worth it.

What I do is have Pagestream print to disk (a *.IMG graphic file). Then I
load that graphic into just about any fax program.
Printing to disk is slow, and it creates a huge graphic file. Make sure
its not too big for the fax program. Try a 7x10 page size in Pagestream.

> be
> of more interrest, but I can't see why AC can't publish both. :-)

Sorry, it seems I wasn't clear enough: my old STFM ended up in a rack,
but I intend to put my Falcon into a full tower case. Actually, I'd
love to put it in a rack, but I can't justify the cost of a MkX case,
and since a "normal" rack case is too narrow (I had to cut 1/2" off
the edge of my STFM when I rehoused it), I don't want to chance it
with the Falcon.

Summary: I _did_ rack the STFM; I _will_ tower case the Falcon.

Cheers,

Xav

> "Trying to make sense of the suburban sprawl......."

Unless you have software that can print soft fonts in graphics mode, you won't be able to add any more to the BJ10e. The BJ10ex did add a Roman font and a few others I think. I own one of each. The BJ200 has all of the Epson fonts, so it can do a script font as well as Roman, sans-seriff and some others. Some Atari software may be able to print out different fonts on the BJ10 by using it in graphics mode, but I'm not aware of it.

There is, I believe, a port of the GNU assembler (Gas) for the Atari
ST. I have
never used it but I have seen it listed among the files at
atari.archive.umich.edu. Even better use the mirror site at Washington
University
in Saint Louis:

http://wuarchive.wustl.edu/systems/atari/umich.edu/Gnustuff/Tos/Gas/

There is also a Gas preprocessor (Gasp) which in effect turns Gas into a
macro assembler but I don't know if that has been ported to the ST. As
it preprocesses an assembly language file into 68000 assembly language,
I would think the C source code for an old Mac version of Gasp would not
need much tweeking to make it work on an ST.

Can you be a bit more clear, which pages are unreadable?

A few things to do when using STFax printer drivers:

1) Use the CPX to configure each printer driver. This locates the
path which STFax uses to read the fax output files.

2) Make sure the resolution you create the fax output file at
matches the resolution STFax wishes to send.

3) For the PGS printer driver, under Global/Configure Printer,
select PAR: NOT Disk File: when using the STFax driver.

There hasn't been support from Charles for a while. STFax was
bootlegged quite heavily a while back and it majorly pissed Charles
off. Sad to lose Charles' support, it's a great program.

The last version is 2.5.

I have a BJC-4000, and using either an Epson LQ or Cannon BJ10e driver, SpeedoGDOS, PageStream, and probably NVDI and others can print a very nice variety of fonts. In GDOS, I have about 12 Speedo fonts, plus a ton of bitmapped fonts (however I have yet to figure out how to get these to print on my printer -- anyone know?) and on PageStream, I have even more, and you can easily purchase more. These all give very high-quality, professional looking output on my Cannon printer. Hope this helps!

Interesting. STinG seemed to work for me OK using PP. Mind you, as I'm
setting up a system for a friend (I use MagicMac, so Web browsing is
done on the Mac side), I haven;t used it much yet. Still, I had no
troubles with Ping, Traceroute (which I tried just to see how the
connection worked), and the demo of Cab 2.0.

Hey, I run MiNT on my falcon. If I have I question about MiNT, in which
group should I post it then : st,falcon or both ?

I think things are already complicated enough with .st, .st.tech and
.st.programmer .

You can print it with DMC Calamus, which is a very wide-spread
commercial DTP package for the Atari.
If you want to convert your PI1 to GIF, you could use Speed-of-Light
(shareware) or if you also want to convert to other PC formats (like
BMP), you should try GEMview (shareware). I don't have any exact web
locations for these but you should try

ftp://ftp.funet.fi/pub/atari

or

http://www.hensa.ac.uk (which has a restricted access)

There are plenty of descriptions on how to fit a 1.44 drive in an STF. I
guess it's not too different to do the same on an external drive. There
are links to that sort of stuff in my Quick FAQ.

486. NVDI-drivers for 600dpip Deskjets

Newsgroup: comp.sys.atari.st
Date: 1997-10-09 00:00:00 UTC
From: Jo Even Skarstein <josk@stud.ntnu.no>
Message-ID: <61j4ql$o8s$1@due.unit.no>
Source record: 115494

I've just bought a HP Deskjet 670C, which works very well with
NVDI's Deskjet 550C driver. I want to use the 600dpi mode as well,
and wondered if anybody has made such a driver, or know where
I can get one.

Given the proper documentation I can easily make one myself, but
it looks like HP doesn't like to give away this info...

Apparently the issue is that NVDI treats chars as multiple straight line

Hi Hallvard!

h> I'd still like to know if someone has made the "help" system work, and
h> how to save the setup with a different printer driver than the system
h> default.

I don;t know if this helps, but the .rc file from an earlier incarnation of
Ghostscript that I've installed here looks like this:

Set environment variables. PATH is used in searching for GS
and for tools. GS_DEVICE is the default device if the "device"
command appears nowhere in this file. GS_LIB is the path that
GS searches for ps files, fonts, etc.

setenv PATH=h:\gs
#setenv GS_DEVICE=deskjet
setenv GS_LIB=h:\gs,h:\gs\ps,j:\postscrp
Elsewhere in this file I have the entry:

Set default device. This overrides the GS_DEVICE environment
variable. If this is missing, the default is the stvdi device.
The device name must match name that GS knows for the device.
To see what devices are installed, type gs -?.
Format is "device gs_device_name".

device stvdi

<ends>

Does this look helpfull??

HI with the print driver editor for nvdi look at the laserjet printer
the commands as very close build a new one and try it out or look at
the print drivers in Papyrus v4 or 5 these have the deskjet printer
670c i think and you can see the commands there! Hope this helps.

Gemview will convert the files, and will most likely print them on
a HP DJ 500. Run it in ST low mode. You can find it at most of the ftp
archives. Look under graphic/gemview/.

Charles,

Your employer is closer to your life than the government could ever
be...at least you understand why it is absurd to put power in the hands
of a central government which could never understand the specifics of
your individual life.

Nevertheless, you are free to quit your job without being thrown in jail
and you are not free to violate the edicts of our government, even those

that may be patently absurd. It is clear that the government holds more power than an employer...its silly to say otherwise.

And does he vote? So what if he does! That doesn't mean he controls the government...you are forgetting the words of warning from our founding fathers who cautioned us to be ever vigilant...and to understand the excesses of democracy. There is an old saying, Democracy is three wolves and a sheep voting on who to eat for lunch...

Some people have good reason to fear the government...

I use both DevPac and Assempro. The latter is 68000 only, no fpu
stuff. DevPac covers 68030 and 68881/2. Unfortunately they recognise
different source codes (such as local labels, macros)

The debuggers in both won't work under NVDI.

Greetings,

I have $400 US waiting for anyone who would like to sell me Logic/LOG3 and
a Unitor II for Atari.

Thanks

A Hades is not very cheap, but it's worth every penny. And even better than a
BilliGotchi - machine.

>there aren't any cheap network cards for the VME or SCSI bus of my TT :-(

Ohhh, then I have a good message for you. I know of a software/hardware
package from Ulrich Roehr, who developed a VME to ISA "bridge", to connect
a standard SMC Ultra Elite ISA-ethernet card to the TT-VME bus. He also
developed a NFS-like extension for the ANS-interface. I tried to contact him
regarding NFS via e-mail, but had no success. Because I have no access to my
Hades here at work, I will search this general package (without NFS) at
weekend and give you more details via PM.

>I have never before heard of ANS - what is it?
I don't know, who was the originator of the ANS-interface, but it defines some
procedures to offer simple network routines like:
ans_open: open a protocol (e.g. IP, ARP, UDP, ...), also defines the
receive-routine of the client. Currently you can open up to 4
different protocols at the same time.
Example: If you open the IP-Protocol you specify your
receive-procedure, and if an IP-packet arrives over Ethernet,
the driver looks, what procedure is specified for IP and
then calls your procedure.
ans_release: release protocol
ans_send: sends a frame to the Ethernet
ans_reset: reset interface
ans_getadr: read out the Ethernetaddress
ans_info: read actual network info
ans_pktalloc: allocate memory for frame
ans_pktfree: release frame-buffer
ans_config: not standard, newly defined for DECDriver to config the
behaviour of DECDriver

I hope the english documents of DECDriver will be finished soon.

Bye
Markus

Nah, you can get it all done with a "simple" text manipulation program(ooo big words<g>) such as Tempus or even 1st word. If you want a browser, there are some free versions of CAB lying around somewhere that you should be able to get.

If anyone could please advise me in the worth of the following hardware, I'd appreciate it! I was offered $150 *Canadian funds* for it...

Atari 1040STe w/TOS 1.62 and 4meg RAM

1 Fujitsu 350meg SCSI-2 Hard Drive
1 ICD FaST 50meg SCSI-1 Hard Drive
1 720k 3.5" Floppy and 1 360k 3.5" Floppy

US Robotics Sportster 14.4k modem w/fax

Atari PS3000 Color & SM124 Monochrome monitors
(PS3000 w/internal 360k 3.5" floppy)

Canon Bubble Jet 5 w/sheet feeder

Monitor master, mouse master, "the best" Trackball, mouse, joysticks, etc..

Please email reply if possible to blobbo@ican.net ..thank you!

509. PACIFIST EMULATOR

Hi.

I�m using a copy of PAcifist Emulator.

This emulator works fine, but the problem is that i cannot play with
joystick. When i try to play with it the movement is always up and left.

Can anybody help me ?
Can i connect my old joystick for atari st in the serial port of my PC ????

Thanks

I agree the answer to mailto://ireland@lix.intercom.es

I can remember (just) running this on my ST - at first it wouldn't
work (don't know why) then I tried letting the 'setup' program in the
original archive unzip the enclosed zipfiles, and set them up etc. The
version I got is on hensa, at http://micros.hensa.ac.uk. Should be
pretty easy to find using the 'Search' function.

From: DCroker@fortress.org.uk
Message-ID: <1738_DCroker@fortress.org.uk>
Source record: 115441

Having spent a few moments installing this today, I felt that this migh be useful.

The line beginning "setenv" belong in whatever environment config file that your version of TOS uses; in MagiC that is the magig,inf file.

The line pointing to the help dir needs to be entered as a seperate line, so thus (from my magic.inf file):

```
#_ENV GS_LIB=h:\gs353b,h:\gs353b\ps,j:\postscrp
#_ENV GS_HELPDIR=h:\gs353b\help
```

This correctly calls the help files when the help key is pressed, however there remains a problem with the postscript version of these files.

The stgs.rc file doesn't seem to be the right place to stash these entries as they are removed if you save options from within GS.

HTH.

Speak to 'ya later!

The bridge is not very complex. But it is specifically made for that kind of
network cards. I will send you detailed informations in the next days to your
e-mail address.

>If I could obtain a network interface for the TT, I would want to use it
>with MiNTNet...
In the last weeks I also found source codes for MiNT-Net network drivers....
I will look for it, it should be no problem to do a port for that kind of
VME-ISA bridge.

>So I'm not so interested in the software, but I would like to know more
>about the hardware.
IIRC the bridge uses some GAL's and that's all. Be aware to receive a lot of
informations in the next days by me.

Ciao,
Markus

Not yet, that's right, but STinG is improving. One thing STinG will never
do of course is Unix style file permissions, but you can already run both
an ftp server and an HTTP server under STinG with the capability of restric-
ting the remote user's permissions. And I know a fellow working on a Telnet
server, so letting other users log into the machine isn't too far away anymore
either.

Once that's done the only really big benefits of MiNTnet are Ethernet and NFS.
I should say here that I started some work on a driver (ETHER.STX) for various
LANCE based Ethernet cards.

Source record: 115452

Ideal for midi, dtp, wordprocessing, cad, or simply a HUGE desktop! Works great with TT (1280x960 in TT high) and all other modes (in greyscale of course!), also works on Reflex 1024 card and most other set-ups. Multisync EIZO 6500 21" monitor, BNC's and ECL inputs (works pc and mac too), paper white greyscale screen with AR coating, FST with dynamic focusing. Superb condition as it has had very little use since new. Original cost was over £1200, will sell for £475 o.v.n.o.

Preferably UK sale as its rather heavy!

Email Simon on WilliamsSG@cf.ac.uk if interested.

>but I just have this bad feeling about not backing it all up, i have
>painstakingly collected software on these 2 computers for years. If I do
>back it up on floppies what is a good program to use?Thanks.-Satcom2

Using floppies will be cheapest as you already have all the h/w. It is
also very reliable. It is also VERY boring :-(You will need
something good to read while you sit there exchanging floppies.

Try Turtle (I used this in the past) or Vault.

You can make the job easier by taking advantage of the fact that you
probably have "master" discs for many of your progs. - these will not
need backing up. To use this strategy you may have to move stuff
around on your HD to separate programs from data.

You can also exploit the "Archive" bit in a files properties. Most
back-up prgs will use this to avoid backing up a file which has not
changed since the last back-up. You will end up with a "base-set" of
flops containing full back-up and then smaller "increment-sets" which
just contain files which have changed.

In excellent working condition. Check carefully for the items. They are good and the best on their category! This system works fine and you will be able to produce your music in the digital domain. Whether sequencing or audio editing, it performs fine.

1. Falcon 030 with 16 MB RAM. All required Steinberg audio & timing fixes have been done. Line level audio in.
2. 2.5' 60MB IDE Hard disk
3. Wizztronics DEKA interface for using external keyboard
4. Honeywell keyboard
5. Beetle mouse
6. SCREEN BLASTER II (for higher screen resolution)
7. Wizztronic Cart Master LIte (allows plugging in two cartridges at once) (for Cubase and Zero-X)
8. Monitor adapters for VGA and Atari Monitors.
9. Steinberg FDI (DSP PORT Digital interface for digital recording: DAT; CD, etc.!!)
10. External 1GB SCSI (no thermocalibration) Seagate hard disk.

SOFTWARE:
(all are original disks & include manuals)
STEINBERG'S:

1. Cubase Audio V2.06
2. Studio Module
3. Cue Trax
4. Style Trax
5. Data DAt (for backing up files to DAT)

---

6. Zero-X (Superb sample editing program)
7. BAnd-In-The-Box
8. ExtenDOS PRO 2.4a (CD-ROM driver with direct CD record to hard drive)
9. HD Driver 6.0 (Best Hard Disc manager for Cubase Audio)
10. ICD SCSI PRO Utilities 6.55 (covers things not handled by HD Driver)
11. XBOOT (Wonderful program launcher)
12. Diamond Edge II
13. Diamond Back III
14. Steno
15. Stalker

Charles, I was just having a little fun with your response to Michael's
sig.

> As far as your statement goes, well, I think it's a bit sophomoric <g>.
>
> As of now, the people are the wolves and the government is the lamb. Just
> ask Bill Clinton, he's being persecuted more than you or I will ever be
> and he's President of USA! So much for the power of the Presidency...
> There are 174 billionaires in the US topped by Bill Gates. Now those
> wolves have Big Teeth and they don't vote on who to eat for lunch.
>

HAHAHAHA! <g> Sorry, but thats about the only response you are going to
get to that type of arguement. President Clinton is far more
perscecuted then a poor inner city African American could ever be? Or
who are you talking about??? I'm sure you are an expert on your own
condition, so I won't make issue with that, but don't speak for the rest
of America...President Clinton is no victim. But by your logic poor
Bill Gates is so persecuted, just look at all the nasty words hurled in
his direction on the usenet... You missed my point entirely about the
excesses of democracy. I never said rich people don't have power or
that an employer held no power, I simply said the government holds more
power. If you can't understand it any other way, then consider that the
government is the largest employer in the United States.
> BTW, let me know when the government starts paying your mortgage bill,
> putting your kids through college or throws you in jail for posting your
> opinions on Usenet <g>.
The government does not currently throw people in jail for opinions
posted to usenet...this is good and something we should always demand of
our government. Remember many governments have censored speech...that
is why it is important to remain vigilant...

Ahhh, on second thought, I guess the government
> does put some through college (GI Bill). "Shame on them...Ayn Rand"
> ---
> C'est la Vie,
>
> Charles
>
> P.S. If you can't do the Time, don't do the Crime...

The government does not pay for anything, except by first taking the money from the American taxpayer. So Americans are going to, and paying for college with a beauracracy in between that makes it more expensive and less efficient. Yes, shame on them...I don't know about you but I don't have money to waste.

There is also ImageCopy, which is commercial, but handles viewing and converting quite a few image formats very well. The dithering quality is also excellent as a viewer. Once you purchase your first copy, the program can be upgraded for a very small fee, when there's an update.

How does it work???

I unpacked the basic package (gs315.zoo I think), and every time
CAB passes it a .PDF file, GS gives me an error message, saying
it cannot locate some of its config files?!!

What is the black magical spell one must recite when installing it?
There was no ReadMe with this archive.....

Thanks to those who responded to my previous posts,
my MEGAFILE is now sold! ;-)

The following items remain FOR SALE/TRADE:

* 4160 STE (TOS 1.62, 4 Mb) ==>> ie: 1040 STE @ 4 Mb
* MEGA-ST 4 (TOS 1.04, 4 Mb)
* SLM 804 Lazer Printer
* STM 1 Mouse
* Softwares
DTP: Timeworks - Publisher
Soft Logic - Publishing Partner
Music: Dr.T - D-50/D-550 Editor
Dr.T - D-10/D-110 Editor
C-Lab - Notator SL 3.1

Offers from C a n a d a and U n i t e d - S t a t e s ONLY!

NOTE: Canadian banks cause troubles for cashing foreign currency
of any kind, including American. This can be avoided by an
electronic fund transfer (Western Union or similar), which
is usually cleared within 48 hours of transaction.

Nonetheless, if you're interrested in trading your MEGA-STE
or your STacy, we can arrange something, as no money would
be trading hands accross the border.

Browse my Homepage for some Atari hardware I am looking for,
if you're interrested in trading instead of buying/selling.

Please reply through e-mail. Thanks.

Very interesting. Which interface (SCSI/PCI/ISA/VME/...), only for Hades ?

> As I've a TT and very soon a Hades I'm very interested to
> purchase some kind of network.
> I don't have a technical brain so my question is maybe silly
> but my TT has a Crazy Dots II card connected to the VME-bus.
> Can I still use that package?

Sorry, I don't know if it's possible to connect two cards to the VME-bus. But
I got the information that a network interface for the SCSI-bus is still in
development. So all Atarians can then use such kind of interface. But for the
Hades you can download DECDriver for free on the regarding homepages.

From: dreibel@idirect.com
Message-ID: <343dab98.0@nemo.idirect.com>
Source record: 115522

TAF/SONGBIRD SIG NOVEMBER 15th!

On November 15th, 1997, both the Toronto Atari Federation (TAF) and
Songbird Music will present a Special Interest Group presentation for
all users of Atari/TOS computers. This event is designed to help all
Atari users find out just what support is still out there for their
choice of computer, and just what an Atari computer is still capable of!

Among the things that will be presented:

- Internet and the World Wide Web
- modifications and memory upgrade
- advice on how to get the most out of your classic Atari computer
both from a hardware and software standpoint
- MIDI demonstration (tentative)

more on this as details become more cohesive.

Admission - FREE.

Time - 12:00 - 6:00 PM

Location - 801 Queen St. West, Toronto, Ontario, Canada

Get in touch with Dan Dreibelbis as dreibel@idirect.com or Mike
Flock at sales@songbirdmusic.com for more info.

540. TAF Meeting October 15th - HOMA presentation

Newsgroup: comp.sys.atari.st
Date: 1997-10-10 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <343dac1e.0@nemo.idirect.com>
Source record: 115523
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy

Agenda for the meeting of the Toronto Atari Federation (TAF) for
the evening of October 15th, 1997:

we at TAF are proud to present an evening with Nima Montasser of HOMA
Systems House - and we're sure it's an evening you're not going to
forget!

HOMA is an Ottawa-based hardware and software house for
Atari-related products. Amongst their many products are software drivers
for popular brands of SCSI flatbed scanners (including Hewlett-Packard,
Mustek and Microtek), the NOVA graphics cards (for enhanced pallette and
resolutions for TTs, Falcons and STs), the PIXART graphics program for
designing your own artwork, and their CD software drivers for accessing
information off a number of popular PC CD-ROMs (including the INFOPEDIA
2, WORLD WAR 2 and BODYWORKS titles).

Nima has a full evening planned for demonstrations of his products,
and he'll also have them for sale at the meeting. So if you've ever
wondered how to get your Atari doing what PC and Macintosh users take
for granted, this meeting is for you! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third
Wednesday of the Month in the North York Memorial Community Hall on the
Lower (or Concourse) Level of the North York City Centre Library at 5110
Yonge St. at Parkhome Ave. Parking garage inside the complex. Those
using public transport can take the TTC's Yonge-University-Spadina line
to North York Centre Station. Meetings start 7:30 PM, $2.00 to
non-members. Membership is $35 CDN a year, and includes a subscription
to the club newsletter PHOENIX and full use of the TAF Online BBS.

I have a program like that on a disk somewhere, but it is VERY bad.
German has the particularity of not using the same sentence structure as
english, so most of the work was unintelligible. The dictionaty included
with the package was quite limitative too.

Well, I can probably email it to you if you're really interested, but I
think I must have got it from the umich FTP archive.

Where you been hiding dood? :-) There are a few translation programs you
can run. Ruftrade is probably the best, and Ger2Eng is more configurable.
There are a couple of older ones that might not be supported too.

>>and wondered if anybody has made such a driver, or know where
>>I can get one.

I just got a 672C myself, and the 550C driver works just fine with it.
If you want, you can get the PCL codes from their web-site
http://www.hp.com/go/peripherals, but unless you KNOW PCL, forget it.
And I mean REALLY KNOW! Just set up your paper size properly, and the
rest is easy. On the control codes page, Iin the start page command line
is a ESC (*t300R) line make that ...t600... and change any other lines
that have 300 to 600. Using makeprn.prg, you can copy the 300 dpi to a new
entry, then rename the new entry to 600 DPI. CAUTION! If the 670 is the
same as the 672, color is only 300 x 300, so make sure in the color page
that you set it to B/W. The F HP manual says use the 550C driver!

>>Given the proper documentation I can easily make one myself, but
>>it looks like HP doesn't like to give away this info...

The problem is not that they don't want to, it's just that the
Techs on the phone lines, and the ones who wrote the manual, think that
the only computer is The PeeWee! Tell them its an Atari, they sound dumb
and say "we don't support that"!
IF you persist and spend 10 hrs or so trying to find an intelligent tech,
you can actually get some real help. But at long distance toll rates.

>like LHARC on my friends Atari? If I have no archiver yet, what do I need to
>get to install it, and where can I download it ?
>
>Thank You.

There are several atari sites that are still good. The ftp.umich.atari
(? I am not sure if this is the right adress??) site has a file called
starter.tos at the end of its directory, that has a bunch of simple archivers,
of several styles. Get it with FTP, copy it to a dos 720K disk, and load
it into his ST. It'll read OK. Then run it, and it is a self-extracting a
rchive itself. That'll get him started, till he get more full featured
archivers.

Greetings to Atari users in comp.sys.atari.st

Anyone in here know what the last version of the VideoMaster Falcon software is?

And is there any Atari software that will convert VideoMaster Falcon .FLM, SEQ, .VID video clips into another video format such as .FLC, .AVI, or etc.?

Also would like to find any info on hardware modifications to either the VideoMaster Falcon cartridge or the ColourMaster RGB splitter. Also any hints, tips, or Faqs on getting the most out of this nice product.

Any help is appreciated.

> is going wrong?

What makes you sure it is loaded ? I'd guess most likely it's not. When does it say that the serial driver is not loaded ? Which entries do you get in the popup that appears when you click on the 'Drivers' button in the 'STinG Internals' CPX ?

Check if the STING.INF points to the directory where you keep the STX files. When booting, STinG shows the name of each driver it loads. It should definitely list SERIAL too, if you got SERIAL.STX in the directory STING.INF points to.

Cheers Peter

557. HOW TO ATTRACT GIRLS INSTANTLY....Secrets to instant sex appeal

Newsgroup: comp.sys.atari.st
Date: 1997-10-11 00:00:00 UTC
From: INSTANT SEX APPEAL <larry@sprynet.com>
Message-ID: <61modb$p8u$8326@ddi2.digital.net>
Source record: 115461

HOW TO ATTRACT GIRLS INSTANTLY....Secrets to instant sex appeal

PURE INSTINCT PHEROMONE ATTRACTANT FOR MEN
WILL GIVE YOU AN UNFAIR ADVANTAGE WITH WOMEN
GUARANTEED

(or your money back)!

Everyone knows that some men (a tiny minority) are able to instantly attract women. It used to be known as "animal magnetism". Scientists now say this natural attraction is due to pheromones - body smells that are not consciously detected, but that effect the behavior of others towards the person giving off these chemical signals. It's natures way of attracting the opposite sex. Scientists have now isolated and synthesized two natural Attractants- androstenol and androstenone pheromone. Carefully controlled experiments show they work and have been widely reported on television and in both the British and international press. Androstenone pheromone has been successfully tested on BBC TV's "TOMORROWS WORLD" and by Desmond Morris (Author of "The Naked Ape" and "Manwatching" and renowned human behaviorist) on BBC TV's "Friday Night... Saturday Morning."

New improved formula PURE INSTINCT from ICT Research Technology contains both ANDROSTENOL and ANDROSTENONE pheromone and produces and undetectable scent that subconsciously attracts women to the wearer. PURE INSTINCT is the world's number one selling and the most concentrated (5 - 7 x normal active strength) pheromone spray for men - don't be misled by cheaper (or more expensive) imitations.

WHAT THE PRESS SAY:

* Lowell Ponte, a former consultant on exotic weapons and a Readers Digest science writer, said in an interview that "use of the recently discovered chemical Androstenone should be banned. Congress should pass a law making it a crime to use this chemical to influence voters by making politicians appear more lovable.
- The San Francisco Chronicle -

* "The stuff attracts women like you wouldn't believe"
- Colorado Telegraph

* "And now this pheromone has been marketed, we've tested it - and good grief it works"
- Koave

* "pheromones influence human behavior in a subtle way. Women are attracted to the smell"
- The Daily Telegraph

* "Pure Instinct is likely to produce a state of sexual excitement or
arousal"
- Men Only (Vol. #44 No. 4)

Much of our sales of PURE INSTINCT are reorders from existing users, reports
confirm success. "PURE INSTINCT really does seem to work! The most dramatic
instances have occurred when wearing it at discos. Girls just drift towards
me and start flirting."
-DT Cardiff

"I Knew PURE INSTINCT wasn't a gimmick when one of the girls at work, quite
out of character, started to seduce me when we were alone in the office."
-SD Nottingham

PURE INSTINCT comes in a discreet 15ml pocket roll on container with full
instructions, Ideal for any man who wants to join that lucky few who have
more than their fair share of sex appeal.

30 DAY MONEY BACK GUARANTEE

If you are not 100% delighted with the results from using PURE INSTINCT simply
return remainder within 30 days for a full refund- No questions asked!

562. OberonV4 beta for Atari-ST available

Newsgroup: comp.sys.atari.st
Date: 1997-10-11 00:00:00 UTC
From: eglis@ubaclu.unibas.ch
Message-ID: <1997Oct11.100941.47628@yogi.urz.unibas.ch>
Source record: 115466

A new release of ETH Oberon System V4 for Atari ST & TT computers is
now available. Oberon is a programming language together with a complete
operating system, developped at ETH Zuerich by Nicklaus Wirth, the inventor of
pascal and modula-2. For more info about Oberon have a look at
http://www.math.tau.ac.il/~guy/Oberon/

The release can be downloaded at ftp.inf.ethz.ch in the folder
pub/Oberon/OberonV4/AtariST

The system is supplied with an Oberon(-1) compiler, a linker and
comes with complete source code. Please remeber that the Compiler does not
support all Oberon-2 features, to wich some of the documentation is referring
to.

ST-Oberon has been tested on TOS 1.0 and 1.4 on a 1040STF, a MEGA ST2
and a Stacy. It may be that the current version of Oberon won't run
on the newer TOS versions, since it uses some system variables, and
modifies the exeption vectors.

Hardware Requirements:

Atari ST or TT computer with at least

2 MB RAM (for serious use, altough ST-Oberon will also run with
only 1 MB)

4 MB of harddisk space, preferably on a harddisk connected to the
ACSI port.

have fun!

please send bug reports or feedback to eglis@ubaclu.unibas.ch
under the subject "stoberon".

> very serious.

My TT with TOS 3.05 seems OK to 2033 (2033 has some significance to me,
and I haven't tried any later date)

Marios TT (with TOS 3.06) should behave similarly to mine in this regard

I cannot comment about earlier/later TOS versions however (the only other
ST I own [TOS 1.02 Mega ST] has been sitting in its box unused for the
last few years and unpacking it will prove difficult).

TOS has a function call that programmers use to get or set the date. This
is done via a sixteen bit number into which is encoded the date. This
sixteen bit number conains a seven bit number that TOS uses to denote the
year. (The remaining nine bits are used to encode the month [four bits]
and day [five bits])

This seven bit number can store either 1) 0 to 127 or 2) -64 to 63. These
values are seen by TOS as offsets from 1980. Therefore the date range is
either 1) 1980 to 2107 or 2) 1916 to 2043.

--

Any email sent to my inca address will bounce, however I can now be
contacted via an intermediary : gem at tos pl net. I would like to
apologise to the genuine respondents that this may inconvenience.

I don't know. I just had ordered me a Hades 060 so I was too excited
that moment to pay much attention to what the guy was saying. I recall
me he was saying something about VME. Also I believe he mentioned it should be
possible to use the ACSI-port instead but I'm not sure of that.
I believe the network card is called NE2000.

My Crazy Dots card has two ports, one for the monitor and one labeled
'aux'.

Hmmm... Using NVDI with Kandinsky, you can definitely convert
characters to beziers. I suppose it's possible that there's an
intermediate "invisible" step of characters->straight lines->beziers,
but the beziers themselves are larger than a straight line
representation would have to be.

I just had a quick flick through the compendium, at it seems that
v_getoutline() is the relevant call. Perhaps someone could play around
with this and see if it's any different under NVDI and Speedo.
According to TAC it "returns information about an (sic) SpeedoGDOS
character required to generate the character with bezier curves."

Cheers,

Xav

I've read the other replies, but I'mnot sure we've understood the question...

When you say you ran Profile on your second machine, do you mean that it runs
just fine on your first? If so, then maybe we either need to look at the
disk drive or ask whether there is some corruption of memory which might
indicate that the RAM upgrade was not fully successful (damaged SIMMs
perhaps?).

What was the outcome?

They're both commercial, so you ought not to be able to find them. But I'm sure that someone will have them available for sale at a nominal cost.

They were both excellent programs, even if they have been superceded by others in more recent times.

That was me. Paul Glover at the FaST Club followed it up with details f
upgrades in the US.

==========
stapplications/imagecopy #823, from j_hughes, 3498 chars, Jul 1 22:56 97
----------
TITLE: New Features in Imagecopy 4.1

1. User interface
-----------------

+ Support for the VA_START protocol. This allows images to be loaded into
an active version of Imagecopy when it is run from third-party desktops.
+ The ability to drag and drop images under MagiC and MultiTOS. Images
which are dragged onto layout and catalogue windows are added to the
page or catalogue.
+ The ability to iconify windows under MagiC, MultiTOS, or Geneva.
+ Imagecopy's menu window can be minimized using the full button (or
[Insert]). This toggles between the full size and a minimal size
containing just the menu bar.
+ Windows cam be closed while other images are being processed.
+ With AES 3.99 and greater (MagiC, MultiTOS, Geneva etc.), windows are not
topped except by a single mouse click. This allows images etc. to
be accessed from untopped windows.
+ Configurable keys for close window, next window, and previous window.
+ [F1] can be used to show or hide the menu window.
+ Imagecopy detects when it is autostarted from MagiC.
+ Imagecopy works in all video modes under MagiCMac.

2. Image formats
----------------

+ An option to save IMG images with VDI palette order. This is useful for
creating IMG files for programs that expect colours to be arranged in
this order (e.g. Thing or True Paint).
+ New readable image formats: APX blocks, XBM images, 320x200 XGA images.
+ The ability to read and write Huffman-compressed TIFFs. Imagecopy now
supports all baseline TIFF formats.

3. Printing
-----------
```

+ An option to adjust the printed page size. This allows images to be printed to large-format (A3 etc.) printers which default to a smaller page size.
+ When using the print-to-file option, page layout files which contain several images are saved into a single PRN file unless the page needs to be fed back for adjacent images (in which case two or more PRN files are created).
+ Support for old (pre-1983) Epson printers.

4. Copying

+ Imagecopy can use GEM routines for copying images. This allows images to be copied on systems which do not provide low-level LineA routines (e.g. MagiCMac or MagiC without NVDI).
+ An option to snapshot the top window on screen (contents or contents plus borders).

5. Catalogues

+ An option to collect catalogue images into a directory.
+ If you locate an image when updating a catalogue, Imagecopy automatically locates other images which have been moved to the same directory.
+ The ability to drag images from catalogue windows onto other catalogue or page windows. Under systems which support drag and drop it is also possible to drag catalogue files onto other application windows.
+ If a catalogue has not been given a file name, Imagecopy creates a default name from the catalogue's title.

6. General

+ Ability to load and save custom palettes for viewing or converting images.
+ Ability to load and save printer and system INF files.
+ If images are loaded into Imagecopy from the desktop or another application, holding down the [Shift] key displays a dialog which allows the images to be printed or converted (instead of viewed).
+ A slideshow image is unloaded before loading the next image if it is there is not enough memory to keep both images in memory.
+ [Clr/Home] toggles between displaying an image from the top-left and centring the image.

7. Bug fixes

+ All known bugs have been fixed.

Jeremy

==========
stapplications/imagecopy #824, from j_hughes, 718 chars, Jul 1 22:56 97

TITLE: Imagecopy 4.1 Prices

This is the current price list for Imagecopy 4.1. The full program is £10 cheaper than it was a year ago, and the upgrade from 4.0 to 4.1 is only £4.95 plus £1.25 p&p.

Imagecopy 4.1 £24.95
Imagecopy 4.1 PhotoCD £29.95

Upgrade from Imagecopy 4 £4.95
Upgrade from Imagecopy 2, 3, 3.5 £9.95
Upgrade from Imagecopy 1 £14.95

Postage and Packing £1.25

If you upgrade from Imagecopy 4 you don't need to return any disks. For other upgrades please return disk 1 (or disks 1 and 4 when upgrading from a PhotoCD version). To upgrade from a non-PhotoCD version to Imagecopy 4.1 PhotoCD add £5 to the prices given above.

Jeremy

I have problems with 5.11 MAGX.INF. These lines are from the install disk:

#c77700070006000700552005055522207705570750555077031113 02
#d ;
#_DSK MAGXDESK V3.11 1
#_DPG @:\GEMSYS\GEMDESK\MCMD.TOS

See the semicolon in the #d line? It dissapears as soon as I save my
desktop. Then the #d line has the wrong number of spaces.

>stop it doing that extra form feed which feeds a new sheet from the sheet
>feeder?

I believe that 360dpi (vertical) is obtained by printing each stripe
twice with an intervening vertical positioning.

It sounds as if the driver is doing the FF twice as well!! This is
naughty as it ought to realise that non-graphics stuff should only be
done once.

I wonder if there is anything in the printer config. which would stop
this?

I suppose another possibility is that the drivers calculations tell it
that it has reached end-of-page before completing the print out. If
this is the case a small change to the printable-area definition might
solve it.

h>
h>
h> Good idea! I'll keep that in mind for later when I get the time. So
h> much to do, so little time.
In fact I've got it working, I've described the setup in a seperate message
but in essence you must must add two lines to your environment paths, one for
the help and the other for the remainder of GS's resources. having these
entries in the .rc file appears to only redirect the path that GS looks for
its resources but no for the help system, which persists in looking in the
hardcoded path. Also saving the config from within GS appears to remove these
two lines anyhow...

Let us know if this works for you!

Speak to 'ya later!

Hello all

I've just done a deal and ended up with a 1040 STe, MIDI interface - with no manuals and no leads.

I need to know if there should be a modulator between the atari and TV or is it just a direct cable, is the OS in ROM or do I need disk based, are tehre any ST magazines available on the UK market (I can't find any!).

I would love to get this up and running for its' musical capabilities

Many thanks in advance

Ifan

>Timeworks, Protext etc...?

Which Canon bubblejet?

Anyway, probably not relevant, just ask to look at the manual and make
sure that it has an Epson emulation mode (i.e. LQ 850). This is the
most common mode supported - EVERYTHING should run!

Canons are nice but if I had to swap mine for any reason I would
probably go for a Stylus. Rather than boiling the ink to expel it
from the jets the Stylus uses a piezo-electric pump - very civilised.

> correct this problem? Is it dangerous?

It's Windows 95 that insists on writing long filenames to your floppy.
This filesystem (VFAT) is basically indentical to FAT (which DOS and
TOS uses), but the long filenames are placed in "illegal" (i.e. DOS
and TOS doesn't recognise them) FAT-entries and looks like s**t when
you read the directory on your Atari or an older DOS-box.

It's not dangerous, unless you do the following:

1. Format a floppy on your ST, or buy preformatted disks.
2. Save some files on it.
3. Save some files on it on a PC running Windows 95.
4. Save some more files on it on your Atari.
5. Save some files on it on a PC again.

Bang! The disk is trashed...

Message-ID: <01bcd757$c27c8bc0$0b2bf7c2@zetnet.co.uk>
Source record: 115409

1997 Atari Times Awards

In order to pay tribute to those people who have supported the Atari scene over the last year, the Atari Times is launching the Atari Times Awards...

All you have to do to vote is fill in the form on the Atari Times Homepage - http://www.users.zetnet.co.uk/polonowski/atimes/ - or email your votes on the categories below to polonowski@zetnet.co.uk

The biggest award is the 'Special award for services to the Atari community'. Before voting on this we think you should consider your answer very carefully.

Voting will end on the 1st December 1997 so make sure you've made your contribution to the final results. The December issue of the Atari Times (UK) will be the first publication to print the results. After this a few other atari magazines will be given access to the results for possible publication. If you wish to print the results in your publication then email Colin Polonowski at the address above.

The final results will also be made available on the Atari Times Homepage as soon as they have been confirmed, even if this is before the release of the December Atari Times.

That's all you need to know, so go on and get voting...

Actually, decompiling is possible - look at the WWW page at :

http://wwwis.cs.utwente.nl:8080/~faase/Ha/decompile.html

On the "Compiler specific approach" page there's a mention of a guy who wrote
decompilers for
C (doesn't say which compiler) and GFA Basic programs on the Atari ST. They
don't seem to be
available, though.

ATB,
Aidan.

605. Diskette directoru after using Windows 95

If you are referring to laser printers, a Hewlett Packard LaserJet driver should work for most. My Laser Printer 4029 also has an IBM mode that would work with a Quietwriter or Proprinter driver. If you are referring to the newer lines of Lexmark inkjet printers: 1020,2030,2050,2070, Winwriter 150c, these are all OS dependent and work only under Microsoft Windows or Dos running within Windows. The only Lexmark printers that I believe may have been OS independent are the Execjet II and IIc which have been discontinued, the rebadged Canon BJ20, and the 4070 which retails for over $2000.

Harry

Thanks for the interest!

I used "FREERAM.TOS" both before and after adding additional DRAMS to the
upgrade board and got readings of approx 2.5mb before and 4mb after.

My first Atari has been upgraded to TOS v1.04(1.40) and I am wondering whether "PROFILE" doesn't like TOS v1.02!

I obtained a two chip set of TOS v1.04 for the second machine but once fitted the 2nd ATARI didn't want to know.

They have been sent back for testing and the supplier couldn't get them to work either, so is sending a replacement set.

->getting some severe criticism for timing problems and crashes. My
->SM124 has recently died and I have an old VGA (15 pin) PC monitor that
->I would like to connect. Is this possible and if so does anyone know
->the pinout to use??
->.

Once, I attempted such a project. It didn't work too well.. I only got
it to start booting the auto folder and when it went to load the
desktop it would crash. But I did see an image so the sync was correct and
stuff. I was attempting to have it high rez because I do not have a high
rez monitor and I figured that would have been a nice solution. You have to
get a VGA pinout and if you make a mono version, you must connect all
color pins of VGA to mono pin of ST and somehow raise the Monodetect on the
ST (I couldn't figure out how to do such)
Good luck in your project.

#>work with my Atari STe, and all the various, proggies I have, STFax,
#>Timeworks, Protext etc...?
#
#Which Canon bubblejet?
#
#Anyway, probably not relevant, just ask to look at the manual and make
#sure that it has an Epson emulation mode (i.e. LQ 850). This is the
#most common mode supported - EVERYTHING should run!
#
#Canons are nice but if I had to swap mine for any reason I would
#probably go for a Stylus. Rather than boiling the ink to expel it
#from the jets the Stylus uses a piezo-electric pump - very civilised.

It may be civilized - but you will need a Win95 m/c to run it - why
cos Epson are re-engineering the Stylus range - I recently went and
got an Epson Stylus 400 Colour from a dealer. Had to return it and
exchange it for the Canon BJC-4100 that I've got now because I could
not get it to print anything other than the 'straight from desktop'
stuff.

This was using That's Write 3, GDOS, TimeWorks Pub 2, Papyrus Gold,
Calamus 1.09 etc...

All of which worked using the drivers set to 'epson lq emulation'...

Hi
I'm going to buy a hard disk for my Falcon. It is to be IDE, 2-2,5 GB drive.
I am thinking about Quantum Fireball/IBM Aquarius but i dont know if it will
work with my computer (BTW it will be my only disk so it has to autoboot).

If you have any experiences with this HDD's please send me an e-mail.

Greetings from Poland

Maciek

Unfortunately, Charles Edwards told me he is no longer working on this
platform and does not support Ruftrade anymore -- nor the recent upgrade,
which (if unregistered) only deals with a limited length of source-file.

My sympathies!
Charles.

H.E.R.O.2 see sig, thats for STe 4megs and Falcons, Receiving good
reviews, especialy for sound effects :)

also released in last 18 months that you state..

1) Island strike
A small helicopter type game
2) Heartland
Very Fast and big platformer..very fast!
3) Diamond Ice
Platformer with interactive puzzle element and enhanced sound for
. falcon owners
4) Billy Boy
Hmmm maybe not on a falcon?...
5) Autoview
For sticking Cyber SEQ files in an auto folder, with chip music, or
DMA playback samples or both mixed or no sound, supports packed seq
and packed anything, also supports being installe as an app

6) Diskzine construction Kit 2
The used ST+ diskmag shell, now setup for anyone to use

Not all Falcon specific..But should work on it

Also in 18 months theres been 18 copies of ST+ Diskmag and thats
compatable. currently at issue 29.. so 18 months ago would be issues
11 to 29 :))

STOSSER diskmag had a couple of releases but they probably wont be of
use to you..

hmm what else... hmm probably missed something.. but anyway thats
what I have actualy released....All freeware BTW :)

well you did ask :))

Ok, well, it complains about the driver not being loaded when I try and
run dialer.app. after it's laoded the .rsc file as far as I can tell.
It says it's loaded the serial.stx on boot up as it loads all the other
.stx modules, in fact it's the first on the list that comes up. The
entries in the STiNG internals list centronics, ethernet and midi, and
internal, but no serial port - unless this is what's meant by internal?

This is why I am confused because it definitely says it's loaded on
bootup but it complains when I try to dial...

Thanks for help :)

Mol.

> correct this problem? Is it dangerous?

Try copying the files to a HD or another floppy, disregarding TOS's
warnings that the files are corrupt (you may get even a hundred such
warnings or so). Then check if the files are OK (usually they should).
If not, go back to some PC and copy the files to a 720 KB floppy through
DOS or Norton Commander. It is virtually impossible to repair a
"Windowsed" disk on an Atari.

Ruftrade isn't being supported any more either. The unregistered version is a
few revisions behind the registered one now, and the author has abandoned it
:((

Speak to 'ya later!

I did all of that and received this message :

We have recently been requested by you to subscribe to this

List: <notator>

Please confirm that you want to subscribe by replying to this message.

If this subscription is unsolicited, simply delete this message.

Thank you.

I've replied to this message and have not received any response.
(Is there some special way that I have to reply?)

Later, when I attempt to send mail to the notator@coollist.com, I get this message :

Thank you for your email to notator@coollist.com
Unfortunately I could not find your email address
on that mailing list. You need to be on the list
in order to post to it. Thank you.

What do I have to do to make this work?

Jim

There are Atari versions of LHArc, Zoo,Zip,ARC, and sever other programs
that are directly compatable with the versions for other systems. They
should be available from any Atari Archive.

Source record: 115421

My local music store is basically liquidating all their Atari music software. While scavenging through the various titles, i found Softsynth. Apparently you can create samples (not simply edit, but actually "create" as you would a patch...) and transfer them via MIDI to your sampler. Since the program is rather old, the samplers it supports are quite old as well. I believe however, that my ASR-10 supports one of the Akai formats. (still have to check though, as it is a very, very old model akai...) Anyway, isn't it possible to convert these older formats to newer standards? I even think i have the program that does so. Just haven't transferred it from my P.C. to my Atari. Point being, it's been reduced to 25 bucks. If anyone owns or has used this program, any feedback would be appreciated. Oh, i can also get (from a different store) what seems to be the only plug in i've seen for Cubase Score. (Atari version obviously...) Style Trax. Also 25 bucks. I never use pre-made rhythms, but computer generated "ideas" always help. Worth it??

danke,

chrisTiaN
:yes, i actually shelled out $400.00 bucks for a registered copy of Cubase Score, Atari format. Worth more than the machine it runs on. Dedication, or stupidity?? (but i do get discounted platform crossgrades and upgrades...) If only someone "invented" the universal dongle..

> is it just a direct cable, is the OS in ROM or do I need disk based, are
> tehre any ST magazines available on the UK market ( I can't find any!).
>
An STE should have an RF Modulator built in, so you can connect it to a
TV Antenna from the little cinch type socket on the back. A TV set will
display low resolution and medium resolution. You need an SM124 monitor
for high res.

The OS is in ROM, but if you have a blank disk in the drive, it will
boot faster. If you don't hhave one, just switch it on, and wait a few
minutes for the desktop to come up by itself. When it does, then format
a disk with the desktop option.
`
As far as Magazines go, in the UK there is Atari Computing, but I think
it's sold y subsciption only.

You might want to check out my Quick FAQ too (see my .sig)

> I would love to get this up and running for its' musical capabilities
>
If it's MIDI that you want, most serious musical programs run in ST-High
res only, so you'll probably need an SM124.

Thanks to those who responded to my previous posts,
my MEGAFILE is now sold! ;-)

The following items remain FOR SALE/TRADE:

* 4160 STE (TOS 1.62, 4 Mb) ==>> ie: 1040 STE @ 4 Mb
* MEGA-ST 4 (TOS 1.04, 4 Mb)
* SLM 804 Lazer Printer
* STM 1 Mouse
* Softwares
DTP: Timeworks - Publisher
Soft Logic - Publishing Partner
Music: Dr.T - D-50/D-550 Editor
Dr.T - D-10/D-110 Editor
C-Lab - Notator SL 3.1

Offers from C a n a d a and U n i t e d - S t a t e s ONLY!

NOTE: Canadian banks cause troubles for cashing foreign currency
of any kind, including American. This can be avoided by an
electronic fund transfer (Western Union or similar), which
is usually cleared within 48 hours of transaction.

Nonetheless, if you're interrested in trading your MEGA-STE
or your STacy, we can arrange something, as no money would
be trading hands accross the border.

Browse my Homepage for some Atari hardware I am looking for,
if you're interrested in trading instead of buying/selling.

Please reply through e-mail. Thanks.

I have seen a few replies to my posting on this subject and there seems to
be some confusion.

VideoMaster Falcon saves video SEQuences out to a .VSQ format.

So if there is any Atari software that will convert any of the VMF video
formats, .FLM, .VID, .VSQ into another video format then I'd appreciate
any info on it.

If there is currently no way to do this, then maybe someone who does
Atari programming in the video/graphics area could come up with a converter
to transfer these formats into something like .FLC or .AVI.

/* time.c

GEMDOS time and date functions

Originally written by SCC 25 Mar 85.

MODIFICATION HISTORY

22 Apr 85 SCC Modified returns of xgetdate() and xgettime() to longs
rather than ints.

9 May 85 EWF Added in checking for valid date/time setting

13 May 85 SCC Modified xsetdate() and xsettime() to return ERR
rather than BADDATE or BADTIME. Also changed some
bourdary checks in the tests and optimized some code.

23 Jul 85 SCC Modified xsetdate() to allow setting to 29 Feb on leap
year (from correction from Landon Dyer @ Atari).

24 Jul 85 SCC Modified xsetdate(). Fix of 23 Jul 85 was not correct.

26 Jun 87 ACH Introduced new bios function to support
hardware real-time clock calendars.

Hi Maciek,
I have nothing but bad experience from autobooting with IBM-disks, but on the other hand extremely good experience from Quantum Fireball. I have one 1.3GB and one 2.1GB Fireball EIDE on tmy Falcon and both work perfectly in every way. Make sure that you use HDDriver though, since it's the best driver around. I've had problems with everything above 1GB when I've tried using HDX/AHDI.

Best regards,
Claes

Hi, I just obtained an AlberTT card for my TT and was wondering
if anyone out there had any available specific software for it
(res change CPX etc). I already have the driver program tho'

I was also wondering if the manual was available anywhere....?...
Is there a downloadalbe text version anywhere?

Please email me any answers, my news feed is down down down...

Thanks,

I recently downloaded from the Umich site a self extracting tos file
called Icons.tos. My assumption was that it would be some icons
that I could access from the "install icon" option on the desktop.
(I am using tos 4.04, no magic or alternate desktops)
So I extracted the file and got four .rsc files. I tried putting
them in the root of C:\ but that didn't do much.
Will these files do what I want them to do? Where do they have to be
put on my system?

I second that. I always wondered why a program like that didn't already
exist. I don't think there is a PC program like MIDPLAY either.
Good work! But if you do have a MIDI sound module....

This is the general Atari ST (and Falcon, and other Atari clones)
newsgroup. Anything Atari, except for 8-bit computers and Atari game
machines. Lots of musicians here too. There are 3 FAQ's about the
newsgroup you can read too. Look for a message from Hallvard and get the
URL from his sig.

661. !!!VINTAGE COMPUTER FESTIVAL!!!

Newsgroup: comp.sys.atari.st
Date: 1997-10-14 00:00:00 UTC
From: siconic@jasmine.psyber.com
Message-ID: <61ukpccpt6@warez.psyber.com>
Source record: 115363

```
Announcing the First Annual Vintage Computer Festival!
------------------------------------------------------

-----------------------------------------
MORE SPEAKERS, COMPUTERS AND VENDORS ADDED!
SEE WEB PAGES FOR MORE INFORMATION!

http://www.siconic.com/vcf
-----------------------------------------

Mark your calendars! The first ever public celebration of vintage
computers will take place at the Alameda County Fairgrounds in Pleasanton,
California this October 25th and 26th.

The Vintage Computer Festival (VCF) is the first event of its kind
anywhere in the world. This two day festival will feature presentations
and workshops by notable computer industry figures and vintage computer
hobbyists. There will also be an on-site, hands-on vintage computer
exhibition. Experiment with the classic computers of yesteryear!

Each year a computer from the past is placed in the Vintage Computer
Spotlight. This year we focus on the Apple ][. To celebrate the 20th
anniversary of this classic,

WE WILL BE GIVING AWAY AN ORIGINAL APPLE ][ PERSONAL COMPUTER!

Each person who attends the VCF is automatically entered into the drawing!

Both seasoned and new computer collectors will enjoy workshops and
panels to share ideas and learn about finding, acquiring, restoring,
and enjoying vintage computers. Visit http://www.siconic.com/vcf for an
up to date list of speakers and workshops.

The VCF also features the Vintage Computer Flea Market. Find those old
computers, peripherals, manuals, and programs you've been looking for!
The flea market is the ideal way for new comers to the field to start
their own collection or for seasoned collectors to add to their existing
stash.

Celebrate the good old days of computing! Attend the First Annual Vintage
Computer Festival!!!

When: October 25-26th, 9:00AM - 5:00PM daily

Where: Alameda County Fairgrounds, Pleasanton, California

Admission: Pre-registered ($SAVE$)
```

Individual: $15
Family: $24 (two adults and four children)

Benefits of pre-registration include:

o Access to speakers, workshops, flea market and
exhibition
o Pre-paid parking

To pre-register, send a check or money order to:

Vintage Computer Festival
4275-29 Rosewood Drive #161
Pleasanton, California 94588

Please make checks payable to "Vintage Computer Festival"

Print and mail the handy form at the end of this posting
for easy pre-registration!

At-the-door

o Speakers, Workshops, Flea Market and Exhibition

Individual: $10.00
Family: $16.00

o Flea Market and Exhibition only

Individual: $5.00
Family: $10.00

Please note: "At-the-door" rate is for a one day pass
only and does not include parking.

For more information including the latest list of speakers and workshops
please check out:

http://www.siconic.com/vcf

or send e-mail to:

mailto:vcf@siconic.com

If you are interested in vending at the Vintage Computer Festival, please
send e-mail to the above address.

SEE YOU AT THE VINTAGE COMPUTER FESTIVAL!!!

unbelievable.. the guy mailed me the same day..saying the url had
changed :(.. he is just setting his pages up and only just on the
net.. he has decided his software name is better than his surname and
is changing everything around :(.. its now

The new URL is http://www2.prestel.co.uk/sillysoftware/

>and CAB still gives me an cache error on your site. Something is a bit odd

You have no idea how upsetting this is :(, I realy do try to make it
as ATARI friendly as possible, I stay away from frames and big pics
and sounds.. I hold myself back :))) so its atari friendly :) ... with
OVER One thousand hits a month then I presume most can get in :)

>with your site as NEWSie can get it as an URL (with HOME.HTM). Maybe
>someone else outside your server can verify this.

I hope so.. I know some from America have posted saying they get in
with CAB ok?...

>might double check to make sure it's still viable :)

hehe sorry.. an amazing coincidence that he changed the web page name
the same day...

I bought a Canon BJ-250 (?) last month for US$ 160. Couldn't get any of my Epson Gdos drivers or That's Write drivers to work with the thing.

So I took it back to where I bought it, Best Buy, for a refund. Well the resident computer tech gave me a bunch of shit about why I hadn't even bothered to open the CD-Rom disc, included, that has a bunch of MS-Windows drivers and shit on it. I told him that I have an Atari and since it wouldn't do me any damn good I didn't see any point to opening it. But the techie still couldn't figure it out.

I got a full refund but I don't think I'll ever shop there again.

The manual that came with the Canon printer had no technical info in it at all. My current printer, Citizen GSX-130, came with a decent spiral bound manual with a complete command reference for Epson, Proprinter, and Citizen print modes.

The SEQ files that Apex will load are those created by the Cyber series of
programs. This is not the same format as VideoMaster SEQ (or even close).

>
The drivers for the DeskJet 550C work fine. NVDI works great.
I don't know about Calamus, but if it has a driver called 550C or deskjet,
and I THINK even laserjet 2, They should work fine. Laserjet won't work
in color tho'.

Todd Hogarth (bign@ns2.cetlink.net) wrote:

Hi Todd. My experience is with a Canon BJC-210 and at first cannot use it with the Epson LQ drivers because it was configured in BJ mode (IBM Proprinter XL). What I did was to connect it to a PC at work and run the setup program for DOS (and doesn't require Windogus to run) and re-configure it in Epson LQ mode. Since then all the drivers work (NVDI 4, papyrus, etc) and the printing quality is excellent in B/W. Still cannot access some of the printer features though, as printing in color :-(and the smoothing option (720 x 360 dpi). There is also a technical assistance website in the US (and Europe) but when I asked, they referred me to the FAXback system to request the control and escape codes for the BJC models. When I received those, the list was VERY incomplete and, of course, does not inclede the ones I need. Now I am setting up the SOFT PC program trying to run the Canon setup program from my Falcon in PC emulation (need time to try it).

Of course I fully agree with you if never shop there again, with that kind of customer support... Anyways this is a sample of the environmental ingnorance spreaded by the winTel dominance, sadly supported by Canon by cutting out all technical information from their manuals. The manual for my previous BJ-10sx was great, lists with all the codes, examples in BASIC to send them to the printer, fonts, etc, etc. Now, the manuals for the new models are blind to the existance of different systems. Bad, but at least the printers can be used in standard modes, not like Lexmark (look in the other thread) that look like are setting Windogus-specific hardware... keep away from them!.

Don't give up with your next printer! There are many ways to by-pass the problems and the Cannon quality/price is good... otherwise I suggest you to try one of the HP models as they are very good too and there are many atarians using them.

Regards,

Daniel.

Hello

I'm looking everyhwere to find Automation disk 215.
Because it is FULL METAL PLANET on it, and I loved this game on my real ST.
I have the original disk but can't convert it to .msa or .st file because of the protection. So I can't use it with Pacifist (the emulator).

Can someone help ?
Thank you
Bye
Claude DAVID

> Will these files do what I want them to do? Where do they have to be
> put on my system?

Hi,
I haven't seen the particular files you describe but I guess the
generated
.rsc files do contain icons. What you have to do is to edit your
deskicon.rsc
(or deskcicn.rsc, or both - I think MultiTOS looks for deskcicn.rsc, and
TOS
for deskicon.rsc but I may have it the wrong way round) and add the new
icons. You can do this with a resource editor like Interface 2 - just
open
both the new .rsc file and the deskicon.rsc files and copy into
deskicon.rsc.
There are PD resource editors which can do this too but I can't think of
any
offhand. Once the new icons are in the deskicon.rsc file, you can
reboot
and all the icons should be available from the "Install Icon" menu item.

ATB,
Aidan.

Is that some kind of midi expander? St's don't need a midi interface, as
its built in. But there are expanders that give you multiple ins & outs.

There is lots of midi software you can download. Format a DOS 720k disk on
your PC to transfer files to the STe. Just geussing you are reading this
on a PC (ugh).

Quite right. I call it a SCSI2 connector as I've never seen it _except_
on SCSI2 setups. It is a high density 50pin connector, about a 1/4 to
1/3 the
size of the DMA connector on a ST, with very tiny pins!

If Someone who has access to GEnie wishes to do a great service for the atari community, Charles Edwards, the author of Ruftrade, (the German to English translator) was uploaded to it last july. Many of us do not have access to genie, and If you could download it, and post it to one of the regular ftp sites, like the french one, and/or send me a copy,
I would appreciate it.
I have a recent registered version, but not the ;atest.
See my other post "Ger>Eng translator" a few posts back.

I have a Canon BJ-5, which emulates either IBM Proprinter or Epson LQ(24 pin). It works very well, and prints nicely, but the cartridges are not cheap, and the price is going up, and if you use refills or third-party carts, and have to take it to a Canon repair depot, be prepared to be chastised and robbed!

One problem with the new Canon printers - they're designed to work
with Windows-based machines to the point that they have no dip-switches;
they also require a command from the computer via software to change
from 720x720 black mode to 360x360 colour mode. I had bought one of the
new Canons last year and discovered this the hard way (Canon themselves
don't give documentation in their manuals, and don't offer any
Atari-based software to do the switch, although their web site offers
an Amiga package). Nor does NVDI 4 have any drivers compatible for
these new line of printers (yet, take that as a hint, ASH :)).
Thankfully I was able to trade this printer in for a Hewlett-Packard
Deskjet 540 without too much of a loss in outlay.

```
Unless some clever boffin comes up with a nice desk
accessory/application for setting up one of the new Canons, I'd say
avoid the Canon for now and look at an HP or an Epson, which have a
number of compatible drivers available for it (and there seems to be a
price war going on - have you seen the HP-400?).

686. Wanted Disk Lable for DeskJet

Newsgroup: comp.sys.atari.st
Date: 1997-10-15 00:00:00 UTC
From: William Pike <wpike@doitnow.com>
Message-ID: <01bcd917$9a9a2600$529d62cf@wpike>
Source record: 115242

I am looking for a program that will run on an old fashion 1040st that will print on a deskjet 500 sheet lables. It would be able to accept a disk number and disk title, then read the disk contents from the directory of the disk. Hopefully it would also permit you to print to the sheet at random positions, to allow you to use partial sheets.

Does anyone know of such a program and where I might obtain a copy?

Thanks PACMan aka Bill Pike

That is bad news. But does the author still send the latest/last version
if you register? A bit of confusion about "supported" and "available for
purchase".

I like the concept of registering by email, and sending Cash by snailmail.

WOW !! I can't even think of doing something like that!!! So I would
throw my Falcon in the trash if I bought a power PC??? Or a DEC Alpha or a
Sun.........

> > If you have stopped, it might be a good idea to release the full
> unlimited
> > version.
>
> I have already done so. It was uploaded to Genie in July by
> k.van-dellen@genie.com

WOW^2 I just sent 2 emails trying to find out how to buy or register
Ruftrade. I can get on Genie as a new user and download tons of stuff
and ftp it all to atari.archive.umich.whatever.

This brings up the question of what happens to the Atari file archives of
Compuserve, Genie, Delphi, ect.

>I would appreciate it.

OK, I've uploaded rftrd2qn.zip to ftp.funet.fi/pub/atari/incoming/
tonight.

Its read_me.txt appears below:

Notice!

This program is freeware, and is uploaded with the permission of the
developer, Charles D. Edwards. All notices within the program regarding
registration, support, and development should be ignored.

This is the last version of RUFTRADE 2. Charles has graciously made it
freeware so all the Atari survivors can use and enjoy it. There has been,
and continues to be, a large volume of Atari software with German docs, and
this program is very useful for translating them.

If the program is uploaded to bulletin boards or other user libraries,
this file must accompany it.

Hmmm... I guess I can make a shoot, but I think others knows better.
So what's "new" Everything is not Falcon only ofcourse.

Apps:

Papyrus 5
Calamus 96 (97?)
PhotoLine 2.x
MagiC 5
NVDI 4 (soon to be 5 I have heard)
HD-Driver 7
Jinnee
Pappilion 2.5
ArtWorx
Texel
POV 3
AniPlay (with IV32 support)

Music:

MIDPLAY
Digital Home Studio
Quincy
Several titles from SoundPool including their new Dolby Surround
encoder!
MPEG2 player (soon MPEG 3 player as well)

Games:

Crown of Creation 3D
Running
Bad Mood (almost...)
Conquest of Elsylum 2 (or what ever it's called)

Internet:

CAB 2.5
STiK

STiNG
PPP-Connect
Newsie
Popwatch
Newswatch
aFTP

And those that I have missed and doesn't know of.

I've long since passed the point of no return on this, Robert! I got
my BJ-300 second hand and it came with a whole boxful of empty carts.
I have just been filling these with stuff I buy in 80ml or 150ml lots.

The printer is not used much so when it is switched on I sometimes get
the "Low-Ink" beeps. If I switch off and on again to let it repeat the
priming cycle everything is OK. Now and again, usually when changing
carts, I put it through its "Cleaning" cycle to blow out any deposits
which have built up in the hydraulics.

There are several ST emulators, but none is specifically STE compatible.
Pacifist seems to be the most compatible one around.

This is all in the Quick FAQ.

Yes, a PC bus mouse can be rewired for an Atari. Otherwise, if you have
no other use for your serial port, you can connect a PC serial mouse and
use a little software driver to get it to work.

Source record: 115264

In a previous article, bdc2@po.cwru.edu () says:

Somehow this got messed up! I said something like:
I have a registered version of st-fax 2.1. With the passing of
Toad from the Atari scene, they no longer have any 2.5 versions, and
the authors e-mail no longer functions, stuff gets bounced.
It is a pity when some useful program that is commecial-ware
or crippled shareware gets dropped bt the author, and so lost to the active
Atari community.
A good example in point is Ruftrade2, the German>English translator.
The author sold his TT, but downloaded it to Genie before he did as
Public Domain. I just uploaded it to ftp.funet.fi and to ftp.ibp.fr
and it will be saved for posterity.
ST-Fax, however just dies, and you are stuck with the latest version
you happened to get. If anyone has it, could you e-mail me?

From: pettert@notam.uio.no
Message-ID: <6238n6$lt0$1@ratatosk.uio.no>
Source record: 115269

Hi all!

I dl'd the new Sting version from Peter's page today, and it worked at first try with PPP/PAP on my Falcon!!!
(I never had any success with earlier versions...)

So it really seems Peter have done it this time.. HURRAHH - GREAT JOB!!!

However, I noticed that the transfer speed in both Cab and Newsie was slower than what I get in Stik. Now, there are a lot of parametres to configure in Sting and I want to tune it to optimum results.

So I'd like some advice on the buffer sizes in the serial.cpx and the "delay" slider in sting.cpx. And anything else to make the most out of it...
I understand most settings are automatically negotiated with a PPP/PAP connection, so it can't be too much to change... (?)

>configure in Sting and I want to tune it to optimum results.

One thing that I have just remembered is this:

Check that your NAMESERVER line(s) in dial.scr are correct.

I used to get really, really slow responses using CAB2 with STiNG, and it
was because I had 2 NAMESERVERS specified, but *one* of them was typed
wrongly. I corrected that typo, and CAB2 and STiNG whizz along now!!!

Just a thought :)

Regards,
Gary

In what way is the disk trashed then? I do this regularly and haven't
experienced any problems yet.

Ciao

The following is for sale. I tried selling earlier with little success, so
I have really dropped the price. This system is in graet shape and works very well.
$ 1200 plus shipping takes the whole package. I do not want to trade or seperate the package.

Hardware:

Atari Falcon w/14 megs ram, math coprocessor, 84 meg IDE internal drive, 256 color, 520 meg Fujitsu external SCSI drive, 1 gig Seagate external SCSI drive, 88 meg Syquest w/3 blank cartridges, cartmaster lite cartridge expander, joystick, extra mice and cable, Magnavox 13" RGB Multisync monitor, JL Cooper PPS-1 SMPTE Box, JL Cooper MSB+ 8 in 8 out programmable midi patchbay, Compo digital interface and a SoundPool FDI digital interface.

Software:

AudioMaster by SoundPool 2 track audio mastering sofware V2.02
Wavemaster by SoundPool 2 track waveform editor V1.11
Dynamite by SoundPool Stand alone compressor program and
Audiomaster plug-in
CD Recorder Pro by SoundPool records both audio and data cd's V2.18
Cubase 2.06 multitrack audio program with midi sequencer w/ Studio Module, Style Trax
Trax track sheet program
Studio Manager studio invoice program
MSB+ accessory to control MSB+ midi patchbay
Cardfile
Steno
Straight Fax
Geneva
Multitos
Neodesk 4
Codehead Utility Disk
Multidesk Deluxe
Stalker
Diamond Back II
Diamond Edge
Ultimate Virus Killer
Harlekin II
NVDI 4
Blow Up Hard I resolution expander
Atari Works

Imagecopy 4 CD
Gemview
Pallette Master
Pagestream 2.2
Truepaint
Studio Photo
Composcript
Flight of the Intruder
Sim City
GT Look II scanning software for Epson flatbed scanners
DA's Vektor Pro
DA's Picture
4T/FX w/ D2D audio editing software
Kobold
Ease
Multiprint
Musicom hard disk editor
Dr T's KCS midi sequencer
DR T's X-oR editor librarian software
Calamus Sl DTP software latest version w/ lots of modules including
Bridge, Mask, Blend, Toolbox, Color Sep, Line Art,
plus lots more with several CFN fonts
Literally tons of shareware like 525, Thing, Zcontrol, Cab, Ghostscript,
etc.
Probably a few other I haven't remembered.

Regards,
Barry

717. GEnie, Compuerve, Delphi... Atari files?

Source record: 115273
Cross-posted to: comp.sys.atari.st,fr.comp.sys.atari,maus.sys.atari.software
Body handling: HTML body converted to readable text

The question of several great softwares being available only
on "members-only" services like GEnie or Compuserve is a problem.
Sources to Scott Sanders and Bill Penner's (ex-Atari developpers)
work was uploaded there when Atari closed.

Could anyone with access to GEnie and Compuserve fetch it all,
then add a \GEnie\ and \Compuserve\ folder to either Umich or
Paderborn so we can all benefit from these great softwares?

Any help regarding this will be greatly appreciated by thouand
of loyal Atari users around the world.

Thanks!

AFAIK, there still is no PC emulator for the STe (let alone any higher TOS machines). However, there are a couple of pretty good STFM emulators out there. One is Pacifist, another is TOS-Box... Both have their advantages and disadvantages. You need at least a pretty fast 486 (say, 120mhz or so) and preferably a Pentium to be able to emulate an 8mhz ST. Do a Web search on emulators, and it will bring up their Web pages, so you can download the latest versions... Good luck!

PS IMHO-you'll be lots happier by buying a
good used STe-they're dirt cheap now!!!

beAS> put on my system

Hi Andrew
what Aidan told you is one way doing it. The easiest way to test the icons

is to copy your original desktopicon file away from C:\ and rename one of
your new files to deskicon.rsc or however it's called on your system,
after you copied it to your boot partition:-)

Hi!

In article <61mcj1$lfh@rock101.genie.net>,
t.poling2@genie.com (Tony R. Poling) writes:
> What are the popular Tracks and Heads settings for the PCs SCSI adapters?
> What is the most popular, 32/64 perhaps?
It depends on the controller and the harddisk size. Adaptec uses either
64 heads/32 sectors or 255 heads/63 sectors (for > 1 gig hds). Both mappings
sometimes waste a lot of sectors and only allow very limited partition starts
and sizes (DOS compatible partitions must end on a cylinder boundary, where
a cylinder has heads*sectors sectors). Symbios Logic (formerly known as NCR)
uses a flexible mapping with optimized heads/sector values for every harddisk.
For example, a ZIP disk will have 4 heads, 48 sectors and 1024 cylinders.

The problem is that Adaptec does not understand non-Adaptec-mappings, whereas
the SDMS Bios of Symbios Logic adapters can handle harddisks independent of
the adapter they were partioned with. That's one reason why I prefer these
adapters on the PC.

There are other adapters, but AFAIK today's (i.e. new) adapters either use an
Adaptec compatible mapping, or a flexible one like Symbios Logic adapters.

So, to be on the safe side, use Adaptec's 64/32-mapping for a Zip disk (which
is the how new Zip disks are partitioned, anyway), because it can be used
with all currently available adapters on the PC.

Ciao

Thomas

>JOB!!!

This is good news. It's nice to see some *positive* feedback at last about STiNG. I think Peter deserves it. This latest version of STiNG is *excellent*.
I've been beta testing this version for over a week on my Falcon using PPP, and I use it *all* the time now instead of STiK1.12!

>However, I noticed that the transfer speed in both Cab and Newsie was

>I understand most settings are automatically negotiated with a PPP/PAP
>connection, so it can't be too much to change... (?)

This is odd. As I said above, I've been using it for a while now, and on my Falcon at least, it seems as fast (possibly faster than STiK).

I use a "delay" value of 20ms, Baud rate of 115200, MTU of 576.
TBH, I haven't spent anytime 'tuning' it, and I'm very happy with the speed.

Perhaps you could post your settings here, and then we could discuss them :)

Regards,
Gary

Sure, a greater variety of virtually everything. But anything that is
of real importance for a hobbyist ? I'd like to see an X server under
STinG, but apart from that ? And apparently there are STiK/STinG clients
that even MiNTnet users like better than anything available for MiNTnet,
otherwise GlueSTiK won't exist. Almost all clients for MiNTnet are command
line based, which by most people is not considered an advantage nowadays.

Actually, I think GEMulator does ST, & STe, and should be supporting
Falcon, TT, and Mac emulation soon. But, I guess you guys are mostly
interested in emulating the ST for games? Hmm... Kinda funny. I like
GEMulator better because it DOESN'T play games! Heh heh heh... What
would the Amiga freaks say?!?!

What I don't understand is why not someone him self translate CAB and
PPP-Connect. I know that CAB uses a resource file so that is easy and
I guess PPP-Connect does as well. CAB 2.5 resource files are available
in swedish, french and I think italian. So why havn't someone translated
it to english? It's not very hard at all and anyone could do it.

Mille has even put up a online manual for CAB 2.5 in swedish on his
webpage.
Why bother with SS when you can get it tomorrow directly from ASH? Then
I wonder why not ASH can translate the thing them self. SS doesn's seem
to
care about much as there are plenty of great programs for ASH which has
never been translated at all. :-\

If SS can't do it, do it your self! :-)

Subject: REQ: Help with TeX and Epson Stylus
Newsgroups: comp.sys.atari.st
Summary:
Keywords:
X-Newsreader: TIN [version 1.2 PL2]

Hi!

I'm looking for a DVI printer driver for use with CS-TeX and an Epson Stylus printer.
Can anyone help me ? TeX looks really interesting, but as I can't find the good DVI driver,
the printing
looks rreeeellllllyyyyy ugly... :)

help. thanx.

For those that still play games on your trusty ole ST's make sure you
stop by the Video Game High Score page and post your score. The URL is:

http://members.aol.com/pbjurman/highscores.html

They track scores for most console/computer systems out there.

Later,
Steve

When I run the dialer it goes all the way to the point where it
says that I'm (Status: Connected) then the staus window shows
(Status: Initialisation Link),the timer comes on and runs out
then another window appears saying 'Initialization failed--shutting
down' and disconnects the modem.
I'm using a Falcon 030.

this error can also indicate defective allocation tables within your prg
binary. ihad once zip files as program-files which throw this error
in the german Atari profibook i read just add a byte in the lenght of the
program and i would work ...
in fact it really worked (-: you may add some byte more, but most of the
corrupt programs worked fine after this editing.

>

I run Cubase Audio Falcon on my TT (less the audio, of course). I'm
pretty sure Cubase 2.x runs on the TT as well. I think I've got
Notator somewhere too, but it doesn't seem to like TT-high resolution.

btw- Anyone experiencing bugs with CAF 2.06? I don't know if it's TT
specific or what. When I move lots of stuff around in the arrange
window it hangs. It also seems to corrupt saved "songs". When I save
a song & load it back it usually reports an internal error. It
doesn't happen with saved arrangements.

750. Re: Pak 68/3 notator

Newsgroup: comp.sys.atari.st
Date: 1997-10-16 00:00:00 UTC
From: ag352@chebucto.ns.ca
Message-ID: <624410fed1@News.Dal.Ca>
Source record: 115294

There are two versions of Notator:

(1) Notator SL, in versions up to 3.21, mostly from C-LAB but from E-MAGIC in versions 3.15 and up. This version is said to be the best tool for creation of music on the Atari by a solid 50% of Notator users.

Notator SL is not TT030/falcon compatible AFAIK. Some routines in the dongle search don't work with the higher clock speeds or with the fast cache doodads or whatever.

(2) Notator Logic, referred to just as Logic these days, from E-magic, is theoretically compatible with any 680x0 Atari or clone. The interface is rather different from the old Notator, and the 50% of Notator users with Logic on their hard drives swear by it.

But for the benifit of SL users, has ANYBODY been able to run it on a PAK30'ed TOS machine?

Not one answer from a user in a year of posting that question on this news group again and again.

Also consider trying an Epson Stylus 400. I've been using one on my TT with
NVDI 4 with no problems. I haven't been able to use 720 dpi or microweave,
but I read somewhere that a new version of NVDI will have support for these
functions. This printer also prints very nicely in color.

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my Web Page, please E-Mail me at bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien vs Predator and even complete Jaguar Systems. If you have what I'm looking for, check my Atari Catalogs for stuff to trade at: http://www.teleport.com/~bensmith/bscomputers.shtml or E-Mail bensmith@teleport.com for a trade.

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some thing you've been looking for, Something you might want & something New to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml. And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can't attach files to your E-Mail. I will get back to you after the weekend. Please Direct all Replies Through E-Mail to: bensmith@teleport.com.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitor, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's

Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of

Developers and Others who Support Atari. And Bravo Sierra Computers is
on the list. Also, you can find A list of Atari Support on BSC's Web
Site. The Atari Developers, Sellers & ReSellers of Atari that I go to
for Help.

Ah, right! "Incoming" only has write permission so that's why I
couldn't see anything in it.

I'd hoped to grab the thing before it got moved as sysops (quite
understandably) have their own ideas about how a prog. should be
classified and I can often end up exploring half the available
directories!

Skip,

I believe the AlberTT is simply a VME ISAC. Which means that you get one resolution, period. The card can change resolution only by changing the board configuration. There are PALs you can get for either 1024X768 or 800X600, both 16 color. Yours probably has 1024X768.

Body handling: HTML body converted to readable text

Quite simple:

ASH could not speak English if their life depended on it.
Therefore, SysSol have purchased *exclusive* rights for
the non-german market on ASH products.

Others (such as CompDirect) have often bid for translating
specific softwares they get a lot of request for, but the
bottom line is SysSol has exclusivity.

Myself, I have long wished for Papillon to be translated.
Afaik, it will never happen, because SysSol have decided
it wasn't a priority. I'm gonna have to make my own RSC.

CAB 2.5d (or 2.54) has a few additional modules, mostly.
Nothing major to add to the documentation.

According to SS the manual went to the print this week. Translating
the rsc is not too much of a problem most of the comands will be the
same as the previous version any new ones I dont know I would look up
in a translation prg. Have done a few german to eng rsc files my self.

Well, I think I read in Paul Hoffman's "Archimedes' Revenge" (at least
that's the translation of the title in Dutch) that at the end of 19th
century, the editors of some Boston-based news paper had fun in
misspelling certain expressions. So "All correct" was 'translated' to
"Oll Korrect" which was then later abbreviated to
"O.K.". I think.

Hi Deryl,

The PS3000 is a little difficult to find and is worth about $75-$100
alone depending on the individual, your 1040STe isn't worth very much,
maybe $75-$100, the HD and floppy aren't worth much as all, maybe $25
for both, but you"ve got at least $200-$250US worth of equipment, $150
canadian I believe is less then $150US, I don't remember the currency
exchange, have the guy pay you with a US money order, this way
you get US funds.

Curt

Hi there,

I have the problem, that I have to compile some C-files
for an Atari 1040ST (TOS 1.06 Rom) on a Sun Sparc 1+
machine (SunOS 4.1.4). I need to build a Cross-system.
I tried the Cygnus-package for m68k-cross-compiler,
building a cross-gcc for m68k-aout-targets.
But the binaries don't run on the Atari.

Does anyone have an idea, what's going wrong?

Do I need additional patches/files to build a m68k-tos-system?
Are there special options/flags to set/unset for building?
Are there special options/flags for linking?
Shall I build a Coff- od a.out-Cross-system (or another ..)?

I've found a basic i[345]86-linux->m68k-tos Cross system in the
internet, which can only compile a bootstrap. The package contains
a special linker LD as linux-binary.

What is a bootstrap?
Are there any sources especially for the LD, that can be
translated to SunOS?

Please help me.

Thanks.

> have seen the flash of green light!!)

I don't know of any utility specifically to do this, but you have
several options:

1) Find someone with an Atari & take your copy of Notator round there,
then use its' File option to save as MIDI.

2) Find someone with Logic on the PC - this can load SON files.

3) Maybe the cut down version of Logic (whatever it's called) will do
it, if you're prepared to spend a little money.

4) Maybe there's a demo of Logic for the PC which will play the files;
you then just need another machine to record the MIDI events on, and
save out as MID from the receiving program.

Hope this helps,

Xav

I use Lindner TeX and have adopted the DVI_XXX driver program. It is configurable for CS. It will drive all sorts of printers and also the screen. Has lots of goodies associated with its display.

The last version I saw was v3.00. Look for the files:

DVI_300B.LZH binaries
DVI_300P.LZH drivers
DVI_300S.LZH sources

The "300" may be higher now, of course. You won't regret it!

Don't write ANYTHING to the partition containing the lost files.

There are quite a few progs. which will undelete. Best bet is probably
CHKDSK3.LZH - it's an old Atari prog but is Gemmed and is easy to use.

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 10/16/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 5.00 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 4.00 California Games (Epyx)
$ 4.00 Championship Wrestling (Epyx)
$ 4.00 Death Sword (Epyx)
$ 3.00 Devon Aire (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 3.00 Final Assault (Epyx)
$ 4.00 GFL Football (Gamestar)
$ 3.00 Lands of Havoc (Antic Software)
$ 4.00 Man Hunter: New York (Sierra)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 4.00 Metro Cross (U.S. Gold / Epyx)
$ 4.00 Paint Pro (Abacus Software)
$ 3.00 Prime Time (First Row)
$ 4.00 Quadralien (Spinnaker)
$ 4.00 Renegade (Taito)
$ 4.00 Space Quest: Chapter I (Sierra)
$ 3.50 Stunt Track Racer (Microplay)
$ 3.00 SwiftaR (Accustar)
$ 4.00 Techno Cop (U.S. Gold / Epyx)

$ 5.00 Warship (Strategic Simulations, Inc.)
$ 4.00 Winter Games (Epyx)
$ 4.00 World Games (Epyx)
$ 4.00 World Karate Championship (Epyx)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

781. Questions about laser printer & hard disk

Newsgroup: comp.sys.atari.st
Date: 1997-10-16 00:00:00 UTC
From: obroadway@cix.co.uk
Message-ID: <877040935.20479.0.nnrp-04.c2de4f5e@news.demon.co.uk>
Source record: 115325

I've just been given a free laser printer - a Ricoh PC 6000/PS. The manual is on it's way as soon as the previous owner can dig it out, but in the meantime, I'm wondering what chance I have of using it with my Falcon running Papyrus (either through a Papyrus driver or via NVDI).

It does have PostScript, but I'm not aware of any Atari software which can use this apart from Pagestream, which is defunct, isn't it? I think it's also got Laserjet II emulation, but I'm not 100% sure of this, and in any case I don't know how to activate it.

TBH, I don't really know anything about the printer - somebody offered it to me free, so I said yes without asking questions... (If I can't use it, I know someone who probably can.)

I also got a free bare 105Mb Quantum ProDrive. Does anyone know what leads etc. I need to connect this up? The connectors it's got are presumably standard for PCs. There is only one SCSI connector on it, so how can I chain it? Can't see any DIPs or jumpers for changing the ID, either.

Any ideas or advice?

TIA,
Ollie

783. Atariworks

Newsgroup: comp.sys.atari.st
Date: 1997-10-16 00:00:00 UTC
From: cjohns@yplace.demon.co.uk
Message-ID: <877043974_OASIS_@yplace.demon.co.uk>
Source record: 115327

Using Atariworks to print labels, does anyone know if it's possible to suppress empty fields? Some addresses obviously have more lines than others, and gaps are left on the labels if a field is empty for a particular address. Superbase automatically closes up the empty fields... but no vector fonts of course. My Aworks version is 1.207, the latest (only!)I think. Has anyone found a workaround, or even another program that will do the job?

Many thanks

Chris Johns

>I think they are missing some hard- and/or soft-ware that normal printers
>have. Do you know anything about that?

Correct, they have no built in emulations or standard printer control
languages. They are what is referred to as "GDI printers" in the Windows
world, which roughly is equivalent to GDOS devices in the ST world, where
the actual protocol between the computer and the printer is proprietary to
Lexmark. I was also drooling over the 2070 specs, and wrote to Lexmark for
technical info/programming info/etc., and was basically told "hell no."
(It was actually more polite than that, and they actually *did* respond,
which is more than I can say for a lot of other companies.)

My suggestion at this point is to buy the printer anyway, hook up to a PC,
disassemble the drivers, and reimplement on ST. I suppose you ought to get
some dev docs on Windows GDI first. I would do it myself if I had the time,
but at this point I'm losing my enthusiasm for maintaining Atari stuff in
the face of all the progress Wintel has made.

Hi Gary,

Well, there is no joy in Mudville tonite, the mighty Casey struck out!
Are you a baseball fan? Like the Atlana Braves and the Baltimore Orioles
I struck out too with the new STinG. "Link Negotiation Failed" is
what I get with the new STinG. My ISP uses PAP protocol and I struck out.

I'll try with both the Falcon and the 1040ST again this weekend to see
if I doing something stupid or whatever. One thing for sure, I wish
I had other Falcon/Atari owners here to try with my ISP to see what's
what using STinG/ppp. Hopefully, others here in the USA will have better
success :) It would be interesting to know if any one with a commercial
ISP(USA) that uses PAP protocol is having good success using STinG.

Actually I think there are similar programs for the PC. I agree, I have
been waiting for such a program since I got my Falcon! To me, this
sounds
like a program which the Falcon was litteraly designed for. Very strange
that it has taken this long before we got one. But now we do. :-)

I do also belive that Softjee is working on a similar program, but this
one will work like a sampleplayer and accept external midi source and
maybe be able to communicate with sequensers running on the very same
computer. This wouldn't be to bad.

> Good work! But if you do have a MIDI sound module....

Sure. The sound quality will not match that, but on the other hand,
this is more flexible than most GM modules as you can change the sounds
to whatever you want. It uses regular AVR sounds so you can replace
the sounds with your own favourite sounds. It's also cheaper and ideal
for web surfing with background music. And then not everyone has got a
GM module at home. :-))

Now we only need VRML support in CAB as well.

BTW. If there is anyone interrested in trying to implement VRML, Doug
Little (mr. 3D) have said that he might be able to help with out the 3D
code. The same goes for if someone is interrested in porting Quake to
the
Hades. This would be very easy as it's pure 040 C code and assembler and
only the graphics parts need changing from the now used Falcon stuff.

Howdy Roger,

No doubt about it, CAB v2.54 is real along with I-CON and OVL 1.10. Why
they don't release it is anyone's guess. I think TRUST is a problem as
of this moment in the Atari commercial producers. And so it goes...

It's CAB.OVL which does all the interaction with STinG. The actual version
is 1.2618, and you need a fairly recent version to work with STinG. I'm not
sure however, if this version works with CAB V1.5, as I'm not using V1.5
anymore. Maybe somebody else can supply this information ? If not, try CAB.OVL
V1.25, which I believe works with CAB V1.5

> seem to indicate that year 2099 is what Atari users have
> to worry about:

Actually the GEMDOS time fields reserve seven bit for the year, thus the highest number can be 111. GEMDOS convention is to treat this number as an offset to 1980, therefore GEMDOS is in trouble before 2099 : It's 1980+111, being 2091.

Does it built the special GEMDOS executable format ?

My approach would be to fetch the Atari version of the Gnu C compiler
with all linker, etc. in sourcecode, and compile this on your SPARC-
station. Add the Atari libraries for the Gnu C compiler, and you'll
have an excellent cross-development system.

Some busy ISP might be to slow for the 15 seconds timeout built into the
Dialer. May web page contains another version DIALER.LZH with the timeout
time set to 60 seconds.

CONSOLE THAN THE 2600. VERY STYLISH £25 INCLUSIVE

MEGADRIVE CONTROLPADS £5 EACH (VARIOUS) MEGADRIVE ARCADE JOYSTICK(BUILT LIKE A

TANK) £10 ATARI TRAKBALL £10 ATARI 130XE COMPUTER(JUST COMPUTER NO PSU ETC)

£20 VCS AND ABOUT 10 GAMES £20, ATARI SUPER CONTROLLERS £5 EACH.

SUPER FAMICOM, CONTROLLER, PSU, SCART CABLE, PILOTWINGS AND UFO 26MEG BACKUP

UNIT WITH 40 OR SO GAMES. £175

3DO NTSC CONSOLE WITH SPACE SHUTTLE GAME (NO CONTROLLER) FULLY WORKING £35 OR £45 WITH CONTROLLER

MEMORY CHIPS

****

STE COMPATIBLE 256K SIMMS FULLY TESTED £1.30 EACH (7 AVAILABLE)

ALSO ONE 256K 120 NANOSECOND SIMM (SLOW SIMM) £1.00

VGA PC 640K WITH MONO VGA MONITOR(COULD BE USED WITH FALCON), 2O MEG HD £70 INCLUSIVE

BASIC PC WITH 2OMEG HARD DRIVE, 640K AND MONITOR £40 INCLUSIVE.

AMSTRAD PC1640DD WITH EXCELLENT EGA COLOUR DISPLAY (640X350 16 COLOUR DISPLAY), TWO 5 1/4 DRIVES. LOTS OF SOFTWARE, MOUSE, MANUAL, EXCELLENT VERSION OF ELITE (RUNS ELITE AND ELITE PLUS) £55

FREE IF YOU ORDER SOMETHING ELSE BIG ENOUGH FROM ME TO FIT THIS INTO THE BOX; TERMINAL KEYBOARD WITH RGB OUT, SERIAL AND MODEM BUILT IN. COULD BE LINKED TO THE ST/FALCON BY USING THE SERIAL PORTS FOR TWO PLAYER GAMES OR JUST A HIGH QUALITY REPLACEMENT. YOU WOULD HAVE TO REDIRECT THE INPUT FROM THE NORMAL KEYBOARD TO THE SERIAL PORT. SIMILAR TO PC KEYBOARDS. INCLUDES PSU

FREE IF YOU ORDER SOMETHING OVER £35 AND ITS A LARGE ITEM;

CASE 400/26 MODEM. BUILT IN PSU, BT APPROVED, UNKNOWN SPEC, TERMINAL CONNECTIONS BUT INCLUDES TERMINAL TO BT PLUG CABLE (NOT KNOWN WHICH LEAD TO WHICH TERMINAL SO WILL NEED TO FIND OUT/CONTACT BT). AN EXPENSIVE MODEM THAT DATES BACK TO 1984 SO SPEC WILL BE PROBABLY MAXIMUM 2400 BAUD BUT PROBABLY 1200 OR EVEN LESS. MY GUESS ABOUT 1200 AS OLD MAGS HAVE MODEMS OF THIS SPEED AND CASE MODEMS WERE VERY EXPENSIVE. THE INTERNAL CIRCUITRY IS COMPLEX WITH DAUGHTER BOARDS ETC.

SOFTWARE

****

FALCON GAMES. ISHAR(LEGEND OF THE FORTRESS) £10.

ST GAMES.

BLOODWYCH BY MIRROR IMAGE £3 highly reviewed Dungeon Master type game

F19 STEALTH FIGHTER (VERY HEAVY) £8 Classic flight sim

FRONTIER £10(SPARE COPY) The best ST game

SENSIBLE SOCCER £6 superb football game

SENSIBLE SOCCER 1992/93 SEASON £4 (NO BOX) updated version of above

SILKWORM £2.50 sideways shoot em up

SPACE QUEST 3 £8 Monkey Island type adventure

STARDUST £7 Highly rated and great looking STE asteroids game+3D tunnels

WAR MACHINE £1

ST GAMES (JUST DISKS):

JOE BLADE £1.25 (easy to pick up explore and collect game)

SHADOWS OF THE BEAST 2DD £2 (impressive multiscroll adventure)

R TYPE £1.50, (brilliant horizontal scroll sh/up)

TEST DRIVE £1.50, (3D car race on mountain roads)

POWERPLAY £1, (excellent trivial pursuit game, upto 4 players)

GAUNTLET II £2, (overhead multiplayer sh/up, classic)

MARBLE MADNESS £1.25, (playable but a bit stale)

AFTERBURNER £1, (zero playability, honest ain't I)

SUPER HANGON £1.25, (very good 3D motorbike game)

STAR RAY/STAR GOOSE £1.75, (two classic formula sh/ups very polished)

RETURN TO GENESIS/ZYNAPS £1.50, (Zynaps is a classic sh/up)

MICROSOFT FLIGHT SIMULATOR 2 £2.25 (believable flight world)

ARKANOID 2/WIZBALL £1.50, (arkanoids great, wizball is hopeless)

BEYOND THE ICE PALACE/THRUST/THUNDERCATS £2, (3 classic games)

STARQUAKE/XENON £1.50, (xenons very good, starquake is dull)

ELIMINATOR/NEBULAS/ PACMANIA £2, (3 classic games)

HOLLYWOOD POKER £2, (not bad strip poker game but screens are low quality)

CHOPPER X/ROADWARS £2, (two good games)

SPACE HARRIER £1, (I didn't like it)

STRIDER £1.50, (ok conversion but not a very large screen)

BLACKLAMP/QUADRALIEN £1, (blacklamps ok)

HATE (RAINBOW TOS ONLY)+AMIGA VERSION ON SAME DISK) £1.75,

DOUBLE DRAGON £1.25, (crude but playable beat em up)

SUMMER OLYMPIAD £1, (good quality game)

SECONDS OUT £1, (funny boxing game, very well done)

BUGGY BOY/IKARI WARRIORS £2 (two brilliant games)

BOMBUZAL/BOMBJACK/XENON £2, (3 very good games)

STARGLIDER/OVERLANDER/SUPER HUEY £1.75, (2 good plus dire Super Huey)

BLACKLAMP/OUTRUN £1.50, (Outrun is a good conversion of an ok coin op)

OUTRUN £1.25,

DOUBLE DRAGON 2 DISKS(SS VERSION) £1.50

ATARI VCS 2600/7800 CARTRIDGES (CART+INSTRUCTIONS UNLESS STATED OTHERWISE)

ACTION FORCE(PARKER) £2 graphically good for VCS

BOWLING(ATARI) £1.50

BREAKOUT(ATARI) £2REQUIRES PADDLES

CALIFORNIA GAMES(EPYX) £3 later larger cartridge with better graphics

CARNIVAL(CBS) £2 Sega duck shoot game

COMBAT(ATARI) £1.40 still good for 2 players

CRYSTAL CASTLES(ATARI) £2 3D pacman

DARK CHAMBERS(ATARI) £4 later larger cartridge

FROSTBITE(ACTIVISION) £2 frogger variant

GALAXIAN(ATARI) £2 very good sh/up

GORF(CBS) £2 nice multistage sh/up

JEDI ARENA(PARKER) £2 paddles game I think

KEYSTONE KAPERS(ACTIVISION) £3 excellent platform game

MAZE CRAZE(ATARI) £1.40 simplistic

MIDNIGHT MAGIC(ATARI) £2

MILLIPEDE(ATARI) £2 centipede

OUTLAW(ATARI) REQUIRES PADDLES £1.40

PITFALL(ACTIVISION) £2 classic platform adventure

PHOENIX(ATARI) £2 good sh/up

Q BERT(PARKER) £2 very good

RAIDERS OF THE LOST ARK(ATARI) £1.75 difficult

SMURFS(CBS) £2 very well done

SPACE INVADERS(ATARI) £2 classic

STAMPEDE(ACTIVISION) £2.50

STAR MASTER(ACTIVISION) £2 star raiders clone

STAR RAIDERS(ATARI) (FULLY BOXED WITH TOUCHPAD CONTROLLER) £10

SUMMER GAMES(EPYX) £2 later larger cartridge

SUPER BREAKOUT(ATARI) REQUIRES PADDLES £2

THE EMPIRE STRIKES BACK(PARKER) £2 Defender variant

VIDEO PINBALL(ATARI) £2

WARLORDS(ATARI) REQUIRES PADDLES £2

YARS REVENGE(ATARI) £2 sh/up

EDUCATIONAL VCS CARTS

COOKIE MONSTER MUNCH/MATH GRAND PRIX/BIG BIRDS EGG CATCH/ALPHA BEAM WITH ERNIE

Floating around aimlessly at All At Sea.

803. my trade list - would like to trade pc hardware for atari hardware.

Newsgroup: comp.sys.atari.st
Date: 1997-10-17 00:00:00 UTC
From: vf-19a@ix.netcom.com
Message-ID: <3446c555.4247015@nntp.ix.netcom.com>
Source record: 115147

Hello All,

I am looking for something like an STE, TT, Falcon, Jaguar, lynx, spectre gcr, hard drive controller (scsi) for atari ST's, color monitor, b/w monitor. Also would be interested in a few old 8 bit stuff like 1400xl, 1200xl, hard drive adapter, color monitor. Games for the Jaguar and lynx would also be interesting.

I live in California (US) if it makes a difference.

Thanks, James
vf-19a@ix.netcom.com, jamesg@omnicell.com

Here is a list of items I have for trade,
All items work and most have manuals, things that need drivers have them.

CASES
pli external scsi case w/ power
dual under monitor scsi case w/ power
mini tower ibm at case

HARD DRIVES
120 scsi quantum
230 scsi quantum
250 scsi quantum
480 scsi seagate
270 ide quantum
340 ide conner
540 ide western digital
(2) 850 ide western digital

CD ROMS
sb mitsu/ide 2x cd rom (need to have sound card that supports it)
nec 2x scsi cd rom

MOTHER BOARDS
pentium 60 w/ mother board
486dx4100 w/ mother board
486sx25 w/ overdrive socket w/ mother board

VIDEO CARDS
diamond stealth 3d 2000 w/ 2meg (pci)
cobra elite cad card (must have 2d card)- w/ 2 1/2 meg (isa)
cirrus logic vga 512k (isa)
Paradise vga w/ 1meg (pci)

KEYBOARDS
generic 101 at style

MOUSE
logitec serial mouse

MODEMS
14.4 us robotics internal
28.8 us robotics internal
28.8/33.6 us robotics internal
pcmcia 14.4 intel fax/modem

MEMORY
(2) 4 meg 72pin
(8) 1 meg 30pin
2 meg 72pin
(8) 256k 30pin

SCSI CARDS
adaptec 1510 scsi card (isa)
adaptec 2825 scsi 2 card scsi/floppy/ide onboard (vlb)
adaptec 2940 scsi 2 card (pci)
ultrastor u14f scsi 2 card scsi/3rd floppy (isa)

FLOPPY
(2)1.44 floppy
720k floppy

SOUND CARDS
media visions pro audio spectrum plus ide (16bit isa)
media visions pro audio spectrum 16 stereo (16bit isa)

NETWORK CARDS
smc 16bit 10 base t/au ether card
3com etherlink 16 bnc/au
pcmcia 3com etherlink III w/10t adapter

SERIAL CARDS
serial port/comm 3&4 w/ 16550's

MAC STUFF
extended keyboard II
Lapus true color video card - vga monitor compatible

806. STinG; PPP Sooo Close:)

Newsgroup: comp.sys.atari.st
Date: 1997-10-17 00:00:00 UTC
From: grovem@remove2reply.ridgecrest.ca.us
Message-ID: <6275csafo1@ash.ridgecrest.ca.us>
Source record: 115150

Well, I got a hair cut so I figured I couldn't loose much trying out the latest version of STinG:) (just joking:).

After a little trial and error, I managed a Slip connection without problem (about two hours worth:).

When I finally got logged in, I changed my dial script for a PPP connection, changed the CPX settings for a PPP connections and gave it a shot. I can get connected, I even get an IP address:):):). I can ping 127.0.0.0, but not the (IP) server. Clients just hang the machine and force a reboot. The only setting that I could think would make a difference was the MTU. Under Slip, the max I can go with this server is MTU= 256. On my other provider I run Slip at MTU=1524. I can't try this server as it is setup only for slip. The first one, I have the option at log on to go with either.

Most of the other settings are Greek (sorry for the slang:) to me, so I really don't know where to go from here.
Anyone have any ideas?

Thanks,
Mike

807. Re: IOMEGA JAZZDRIVE ON ATARI?

Newsgroup: comp.sys.atari.st

charel spedener wrote:

> Is there anybody who can tell me if it is possible to use an Jazzdrive
> on a Falcon030 and if so, what a driver is needed?

Yes, the JAZ can be used with any Atari. Basically no special driver is
needed. If you want to use the password based read/write protection
which is a unique feature of ZIP/JAZ drives you should have a look at
HDDRIVER (http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html).
HDDRIVER comes with special ZIP/JAZ support including tools for setting
the read/write protection.

>it to english? It's not very hard at all and anyone could do it.

All the beta cab's I and others receive come with an english rsc file.
I think the problem is the docs and ppp-connect not cab itself.

Nick.

I have heard a couple of times that CHKDSK3 could screw up your HD.
STTOOLS might be a better choice.

Aha! Well, then it is of no interest. I thought it was atleast 256 colours :-/

You probably can't use a truetype font with a strange alphabet because
you'd need a keymap for that font. I have a Chinese font for Windows
which, althought perfectly OK is of no use for me, because I can't get
the characters out of it.

Hi Peter,

I've just collected and installed this new version. I have been giving
it a bit of a whirl and am MOST impressed :-))

I don't have a Falc. and have had no bother with SLIP or PPP on the
previous versions. What stopped me using STiNG as a "production"
program was it's speed (it was slower than STiK) and the fact that it
would sometimes pause for fairly long periods. All this seems to be
corrected now. The speed is very impressive when used with CAB 2.0a
and Newsie 0.82.

Thank you :-))

My translation:

<< Fyi, most of the softwares written using an evolved language
have internal kernel functions that allocate Timestamps from
01/01/1970 to 31/12/2037: oddly enough, those will not benefit
from TOS's headroom.

Either ways, the true limitation comes from the NVRAM inside.
On a Falcon, it's the first powerup +100 years, which -worst
comes- gives us until 2092: that ain't so bad!!!>>

CONTROLLERS(JOYSTICK UNSCREWS), INSTRUCTIONS, 2 7800 CARTRIDGES DONKEY KONG

AND CHOPLIFTER IN ADDITION TO ASTEROIDS GAME BUILT INTO CONSOLE. A MUCH NICER

CONSOLE THAN THE 2600. VERY STYLISH £25 INCLUSIVE

MEGADRIVE CONTROLPADS £5 EACH (VARIOUS) MEGADRIVE ARCADE JOYSTICK(BUILT LIKE A

TANK) £10 ATARI TRAKBALL £10 ATARI 130XE COMPUTER(JUST COMPUTER NO PSU ETC)

£20 VCS AND ABOUT 10 GAMES £20, ATARI SUPER CONTROLLERS £5 EACH.

SUPER FAMICOM, CONTROLLER, PSU, SCART CABLE, PILOTWINGS AND UFO 26MEG BACKUP

UNIT WITH 40 OR SO GAMES. £175

3DO NTSC CONSOLE WITH SPACE SHUTTLE GAME (NO CONTROLLER) FULLY WORKING £35 OR £45 WITH CONTROLLER

MEMORY CHIPS

****

STE COMPATIBLE 256K SIMMS FULLY TESTED £1.30 EACH (7 AVAILABLE)

ALSO ONE 256K 120 NANOSECOND SIMM (SLOW SIMM) £1.00

VGA PC 640K WITH MONO VGA MONITOR(COULD BE USED WITH FALCON), 2O MEG HD £70 INCLUSIVE

BASIC PC WITH 2OMEG HARD DRIVE, 640K AND MONITOR £40 INCLUSIVE.

AMSTRAD PC1640DD WITH EXCELLENT EGA COLOUR DISPLAY (640X350 16 COLOUR DISPLAY), TWO 5 1/4 DRIVES. LOTS OF SOFTWARE, MOUSE, MANUAL, EXCELLENT VERSION OF ELITE (RUNS ELITE AND ELITE PLUS) £55

FREE IF YOU ORDER SOMETHING ELSE BIG ENOUGH FROM ME TO FIT THIS INTO THE BOX;

TERMINAL KEYBOARD WITH RGB OUT, SERIAL AND MODEM BUILT IN. COULD BE LINKED TO THE ST/FALCON BY USING THE SERIAL PORTS FOR TWO PLAYER GAMES OR JUST A HIGH QUALITY REPLACEMENT. YOU WOULD HAVE TO REDIRECT THE INPUT FROM THE NORMAL KEYBOARD TO THE SERIAL PORT. SIMILAR TO PC KEYBOARDS. INCLUDES PSU

FREE IF YOU ORDER SOMETHING OVER £35 AND ITS A LARGE ITEM;

CASE 400/26 MODEM. BUILT IN PSU, BT APPROVED, UNKNOWN SPEC, TERMINAL CONNECTIONS BUT INCLUDES TERMINAL TO BT PLUG CABLE (NOT KNOWN WHICH LEAD TO WHICH TERMINAL SO WILL NEED TO FIND OUT/CONTACT BT). AN EXPENSIVE MODEM THAT DATES BACK TO 1984 SO SPEC WILL BE PROBABLY MAXIMUM 2400 BAUD BUT PROBABLY 1200 OR EVEN LESS. MY GUESS ABOUT 1200 AS OLD MAGS HAVE MODEMS OF THIS SPEED AND CASE MODEMS WERE VERY EXPENSIVE. THE INTERNAL CIRCUITRY IS COMPLEX WITH DAUGHTER BOARDS ETC.

SOFTWARE

****

FALCON GAMES. ISHAR(LEGEND OF THE FORTRESS) £10.

ST GAMES.

BLOODWYCH BY MIRROR IMAGE £3 highly reviewed Dungeon Master type game

F19 STEALTH FIGHTER (VERY HEAVY) £8 Classic flight sim

FRONTIER £10(SPARE COPY) The best ST game

SENSIBLE SOCCER £6 superb football game

SENSIBLE SOCCER 1992/93 SEASON £4 (NO BOX) updated version of above

SILKWORM £2.50 sideways shoot em up

SPACE QUEST 3 £8 Monkey Island type adventure

STARDUST £7 Highly rated and great looking STE asteroids game+3D tunnels

WAR MACHINE £1

ST GAMES (JUST DISKS):

JOE BLADE £1.25 (easy to pick up explore and collect game)

SHADOWS OF THE BEAST 2DD £2 (impressive multiscroll adventure)

R TYPE £1.50, (brilliant horizontal scroll sh/up)

TEST DRIVE £1.50, (3D car race on mountain roads)

POWERPLAY £1, (excellent trivial pursuit game, upto 4 players)

GAUNTLET II £2, (overhead multiplayer sh/up, classic)

MARBLE MADNESS £1.25, (playable but a bit stale)

AFTERBURNER £1, (zero playability, honest ain't I)

SUPER HANGON £1.25, (very good 3D motorbike game)

STAR RAY/STAR GOOSE £1.75, (two classic formula sh/ups very polished)

RETURN TO GENESIS/ZYNAPS £1.50, (Zynaps is a classic sh/up)

MICROSOFT FLIGHT SIMULATOR 2 £2.25 (believable flight world)

ARKANOID 2/WIZBALL £1.50, (arkanoids great, wizball is hopeless)

BEYOND THE ICE PALACE/THRUST/THUNDERCATS £2, (3 classic games)

STARQUAKE/XENON £1.50, (xenons very good, starquake is dull)

ELIMINATOR/NEBULAS/ PACMANIA £2, (3 classic games)

HOLLYWOOD POKER £2, (not bad strip poker game but screens are low quality)

CHOPPER X/ROADWARS £2, (two good games)

SPACE HARRIER £1, (I didn't like it)

STRIDER £1.50, (ok conversion but not a very large screen)

BLACKLAMP/QUADRALIEN £1, (blacklamps ok)

HATE (RAINBOW TOS ONLY)+AMIGA VERSION ON SAME DISK) £1.75,

DOUBLE DRAGON £1.25, (crude but playable beat em up)

SUMMER OLYMPIAD £1, (good quality game)

SECONDS OUT £1, (funny boxing game, very well done)

BUGGY BOY/IKARI WARRIORS £2 (two brilliant games)

BOMBUZAL/BOMBJACK/XENON £2, (3 very good games)

STARGLIDER/OVERLANDER/SUPER HUEY £1.75, (2 good plus dire Super Huey)

BLACKLAMP/OUTRUN £1.50, (Outrun is a good conversion of an ok coin op)

OUTRUN £1.25,

DOUBLE DRAGON 2 DISKS(SS VERSION) £1.50

ATARI VCS 2600/7800 CARTRIDGES (CART+INSTRUCTIONS UNLESS STATED OTHERWISE)

ACTION FORCE(PARKER) £2 graphically good for VCS

BOWLING(ATARI) £1.50

c>
c> I've seen a HP-660 C driver in an NVDI 4 version, I think it's in
c> the ET-4000 4.11 R7 one - but, strangely, it doesn't seem to
c> appears with the
c> normal R8 version.
Nor in the r9 version, I don't know why.

However, Jo might like to hear that it's not difficult to generate a new
printer driver based on the 550C one, adding the codes for the 600dpi B&W res
copied from one of the Laserjet drivers (can't remember which one ATM). I
don't know if the 670C printer supports higher than 300dpi in colour tho'.

Speak to 'ya later!

I don't recall Computer Direct(?) being at the show last time, so look
out for someone like System Solutions to sell it.

>
>So why don't you do this, Bruno :-))

Because I'd like to receive a mail *copy* of the Usenet replies, and
not that the replies go *only* to my mailbox. So I ask it in my sig, and
set a "Mail-Copies-To: bkozlowski@nordnet.fr" line in my headers, so the
newsreaders (Gnus, slrn, etc...) knowing this one do it automatically
(it's not a real standard).

Bye! Bruno.

>experienced any problems yet.
>

Let see if I can explain what is happening:

Windows 95 saves the files to disk using MS standard of VFAT. That's to say it saves both 8.3 and long filenames (LFN) into the directory sectors. You can actually see this using KnifeST or any sector editor looking at the directory sectors. Both the ~1 and LFN will be displayed. The LFN takes several entries and have certain attributes set (IIRC, the volume, archive,system, hidden, readonly are all set) which makes it hidden on normal directory listing. They also mess about with the location bytes, the file offset (I can't remember what). This 2 things screws up the Atari BIOS which reads the disk.

You can actually set make Win95 NOT save using LFN. There is a registry entry which can be used (I may be mixing my WinNT here)to disable LFN. But the easiest is to run Win95 in DOS mode, where the GUI is not loaded, (this is different from running DOS PROMPT from the start menu) so the LFN is not used.

Regards
William

And this su**s IMHO. If they can't handle their job, let someon
else do it insteed of making us all suffer.

> Myself, I have long wished for Papillon to be translated.
> Afaik, it will never happen, because SysSol have decided
> it wasn't a priority. I'm gonna have to make my own RSC.

The problem with Papillion (atleast < 2.5) is that it hasn't
got any resource file! Maybe the latest version has as it has
been quite a big update. Papillion is a great example on what
we are missing. A very good and not at all expensive graphics
program.

> CAB 2.5d (or 2.54) has a few additional modules, mostly.
> Nothing major to add to the documentation.

So has it been released???

I still think it's better to buy it directly from ASH in german
and then translate it, or ask someone if you can copy his
resource fil if someone else has already done it. I know this
has been done on lots of german applications. I guess you can't
upload the resource file though as it's not leagal.

First off,

Why would you want one? They are not well supported in the (albeit
small) industry, they only allow one video mode, and that in only 16
colors.

You're far better off getting a Nova, Crazy Dots, or Cyrel Sunrise, in
that order. The Nova you can still get new from Homa Systems in Canada
(and probably a few other places), the rest (including the AlberTT)
you'd probably have to get used from someone.

Good luck!

Dan

The best way to avoid all these problems is to rename long files to 8+3
format _before_ you copy them to your ST floppy. That way you wont get
cryptic ~1 type names. I've always done this when moving files between
Win95 and the Atari platform and have never had any problems.

Michael

Found the problem - the delay slider was for some reason stuck at
340ms. I pulled it right down to the bottom 10ms and saved it. Sting
now flies along... :-)) And even faster than Stik it seems!

So, it's a joy - especially since my provider is stopping slip support
in a short time...

Thanks again, Peter!

Imgbuild or makedisk(which is similar) can't read some ST disks even if
they aren't protected. The only way to convert these disk is to use MSA on
a ST machine and then to transfer the MSA file (or the two msa files, disk
images can be splitted) to the PC using a null modem cable or a 720kB PC
formated disk.
That is how a lot of games are transfered.
About the protection, the only way is having cracked games from pirates
Compils disks. They works fine and take lace disk place !

Hi,
ScanX, Microtek E3/E6/35T+ or UMAX ASTRA 1200S/VISTA S12 drivers
works on all ATARI machines and clones including, Mega STE considering
that you have the Link (or Link II) or the ADSCSI hostadaptor.

The TOP Link I believe is the same as the ICD Link. If ICD drivers
work on it, then Homa Systems ScanX should work on it as well.
I can provide you with a little test program that tell you whether
or not it will work. Please email me at:
aa414@freenet.carleton.ca

If you have any questions, please contact:
aa414@freenet.carleton.ca

Hi,
Check out Homa Systems House's web page at
http://www.magma.ca/~nima

or contact them at
aa414@freenet.carleton.ca

They have a suite of ATARI drivers for SCSI Scanners, including the
affordable Microtek ScanMaker E3 True color Flatbed scanner (about
$145 US$)

Supported Scanners are:

Microtek ScanMAker E3, E6, 35T+
UMAX Astra 1200S, Vista S12

> Just found out about these GEMDOS sources on a CP/M site.
> The particular routine of interrest is TIME.C below, and
> seem to indicate that year 2099 is what Atari users have
> to worry about:

That's right, but read the bit format of the return of
XBIOS call, show this limit.

For information, most of software wrote in high language,
have some internals functions wich calculate a date from
10/01/1970 to 12/31/2037: that's silly cause they couldn't
benefit from the GEMDOS's limit.

By the way, the real limit comes from the NVRAM who are
in the computer: fo Falcon, it's the date of starting up plus
100 years, so more than 2092: that's good, isn't it?

Arghhh, je me suis cru a l'ecole et en plus je vais
me prendre un carton (comme d'hab :-( )

The new Dialer has an option 'Save debugging information' in 'Configs' /
'Miscellaneous'. Set this flag and try to connect. The Dialer will write a
file DEBUG.LOG afterwards. It contains the complete log of the PPP connection
attempt, and will give me the information what caused the attempt to fail.
Send it to me by personal mail, and I'll see what I can do. If you know how
PPP works you can read the log yourself, and tell me.

Cheers Peter

RTFM ! Especially the 'Frequently Asked Questions' bit. Actually this is
probably the chart-topping question.

On the STING.PRT bit, you can choose the filename and path arbitrarily. The
folder and the name are saved internally, so STinG will always find the file
again as long as you don't move it.

Cheers Peter

Same provider, different system (TT w/TOS 3.06) and exactly the same results with STinG PPP. As with Katherine, STinG SLIP works fine (always has), debug.log shows IP connection open but nothing will resolve.

So promising...

Thanks for the hard work, Peter.

868. Sting setup

Newsgroup: comp.sys.atari.st
Date: 1997-10-18 00:00:00 UTC
From: pettert@notam.uio.no
Message-ID: <62aji3bne1@ratatosk.uio.no>
Source record: 115038

Ok - since I've noticed some people still have problems with the new
Sting, here's a step-by-step installation guide. (This is for Falcon
with PPP/PAP. If you use another Atari, edit the serial port settings
accordingly.)
The setup is for a dial up modem connection.

1. Make a folder somewhere on your HD named STING. Copy the files
DIAL.INF, DIAL.SCR, DIAL.RSC, DIALER.PRG and LOCAL.FEE to this
folder. Edit the DIAL.INF file to show the path to this folder
(f.ex. C:\STING\)

2. Make a sub-folder in the STING folder and call it MODULES. Copy
RESOLVE.STX, SERIAL.STX, TCP.STX, UDP.STX, DEFAULT.CFG and
ROUTE.TAB into it. Edit ROUTE.TAB for your modem port:
(0.0.0.0 0.0.0.0 Modem 2 0.0.0.0)
^^^^^^^
3. Copy DRVIN.PRG, SCC.PRG (both from the HSMODEM package), STING.PRG
and STING.INF in that order to your auto folder. Ideally, these
files should be the last in the auto folder, followed only by
screen software like Blowup, Videl Inside etc. Edit STING.INF to
show the path to the MODULES folder. (C:\STING\MODULES\)
(Don't forget to remove/deactivate STIKTSR.PRG and STIK.ACC)
Use the default settings in DRVIN.PRG. For SCC.PRG you can
experiment with the Receive Modem2 and Send Modem2 buffers. I get a
good result with both buffers set to 16384.
Note that SCC.PRG is the driver for the Modem 2 port. If you use
another port, choose the correct driver from the HSMODEM package.

4. Copy the cpx's from the Sting archive to your cpx folder. If you
still have the old MODEM.CPX - trash it now. Open the SERIAL.CPX
and set the correct parameters. On a Falcon it should be: MODEM 2,
Bps: 115200, Bits: 8, Parity: None, Stop bits: 1, Flow control:
RTS/CTS. Now save the settings.
Open the STING.CPX and edit the delay slider. On my Falcon, a value
of 10ms works best. Save the setting.
DON'T DO ANYTHING with the other cpx's. They are only for Sting's
internal use or other types of connections.

5. Edit the DEFAULT.CFG in the STING/MODULES folder. Here's my
settings - fill in the blanks to match your setup:

```
ALLOCMEM = 100000
#
THREADING = 50
FRAG_TTL = 60
#
```

```
ICMP_GMT = -60
ICMP_AD = 10
ICMP_FLAG = 0
#
TCP_PORT = 1024
MSS = 2000
RCV_WND = 5000
DEF_RTT = 50
DEF_TTL = 128
TCP_ICMP = 1
#
UDP_PORT = 1024
UDP_ICMP = 1
#
USERNAME =
HOSTNAME =
FULLNAME =
#
NAMESERVER =
DOMAIN =
DNS_CACHE = 64
DNS_SAVE = TRUE
#
PAP_ID =
PAP_PASSWD =
#
# Here starts the client relevant stuff.
#
#IRCNICK = Perot
#IRCSERVER = irc.uni-linz.ac.at
#IRCPONGMSG = IRC is always slow and frustrating, isn't it?
#
DIALER = 127.0.0.1
LOGIN_BATCH = C:\STING\LOGIN.BAT
#
-----------------------------------------------------------
```

6. Edit the DIAL.SCR file in the STING folder. My setup is like this:

```
RESIDENT = 0
PROTOCOL = 1
PAP_ID =
PAP_PASSWORD =
VJHC = FALSE
LAN_PORT = FALSE
USERNAME =
HOSTNAME =
FULLNAME =
CLIENT_IP = 0.0.0.0
MTU = 1500
MASQUERADE = FALSE;
```

```
NAMESERVER =
NAMESERVER =
NAMESERVER =
SERIALPORT = Modem 2
PHONE_NUMBER =
FEE_FILE = LOCAL.FEE
ISP_TIME = 72s, 0.07
ISP_SENT = 12K, 0.03
ISP_RECVD = 84K, 0.09
DEF_ROUTE = TRUE
PTP_ROUTE = FALSE
EXEC_BATCH = FALSE
INIT = ATZ
PREFIX = ATDT
HANGUP = ,+++,ATH
CONNECT_WAIT = 60
REDIAL_DELAY = 20
SUCCESS = CONNECT
FAILURE = BUSY
FAILURE = NO CARRIER
ABORT = NO DIALTONE
FIND_TIMEOUT = 60
```

Again, fill in the blanks with your settings. You might want to change the MTU setting with whatever your provider recommends. The DIAL_SCRIPT part of the file is not needed for a PPP/PAP connection.

7. It's now time to try a connection. Before starting the dialer, open the STING.CPX, click the "active" box and leave it with "OK".
Start the dialer and connect to the internet. Hopefully, it should work now... :-)
(If it doesn't, check your provider specific settings - i.e. NAMESERVER, DOMAIN, PAP_ID, PAP_PASSWORD etc.)

Hope I haven't forgotten anything and that this might help some of you...

870. Atari ST Software For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-10-18 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <877192860.15976.0.nnrp-03.c1ed1184@news.demon.co.uk>
Source record: 115040

I have a selection of Atari ST titles for sale.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) £3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) £4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) £5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) £5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) £5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) £5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) £2
Ballistix (1d,ss) £3
Superleague Soccer (1d,ss) £3
T.V Sports Football (1d,ss,nb) £3
Vector Championship Run (1d,ss) £3
Top Shot = Kick Off + Extra Time. (1d,ds) £4
Graham Gooch's World Class Cricket (1d,ss,meg) £5

SIMULATIONS

Lotus Espirit Turbo Challenge (1d,ds) ..... ◆2

Basically the same here. Slip is no problem. With PPP, I get a
PPP connection and IP address, but cannot ping anything other than
127.0.0.0. Resolve under PPP does work somewhat. I was able to resolve
another domainname within the same local area, but couldn't get out of
town:>).
I thought that if I could at least resolve the other domain, then I
should be able to communicate with it, but that wasn't the case with
the clients, they just couldn't resolve the domain or IP.

I couldn't test to see if PAP works as the server dosen't utilize it.

Mike

873. FOR SALE: Complete Atari Mega ST2 system with Software & Magazines

Same thing here... the same results as the last version: Everything
connects and negotiates okay, but I can't ping or resolve anything. :-(

Ron, I think you missed the one where he stated that his ST blew up! I'm
doubtful that Notator would run on a PC-based ST emulator, because doesn't
it require a dongle, or some other copyright protection?

I have run my Lexmark 1020 under HP emulation very well with all
programmes that have a HP driver.

Robert

880. Nova Question

Newsgroup: comp.sys.atari.st
Date: 1997-10-18 00:00:00 UTC
From: tross3@hamtel.tds.net
Message-ID: <62bf79$dlk@news2.tds.net>
Source record: 115050

Is there a site that contains FAQs about the Nova Card? I've tried looking in the Deja News Archives, doing web searches, etc. and I can't find any.

I'm trying to use Nova on a TT, with Magic 4/NVDI 4, and I can only get 640 x 480 w/256 resolution. I've played with some of the BIB files, and a couple of other resolutions seem like they would work, going by the "set values" screen, but I have no idea how to install them.

I've also tried to translate the documentation, but both GER2EN30.PRG and RFTRD2QN.PRG bomb (a 68000 Exception error [error -69])

I imagine that Homa has english documentation for Nova, I'll check, but in the meantime, I'd like to get at least *one* other resolution going.

Thanks for any info,
Terry

What size monitor? Have you installed the AUTO folder programs
properly?
Have you used the VMG program?

> convert Micro$oft Word documents to either ASCII or to an Atari format

MSWord documents are of quite simple format, so you can just load a
*.doc document in any editor that can wrap long lines, cut the beginning
and end - the rest is pure gold. There are no control codes in the text
itself, only in the header and "footer".

Maciek

885. PAP ID line in Sting is too short

Newsgroup: comp.sys.atari.st
Date: 1997-10-18 00:00:00 UTC
From: J.Diertens@Inter.NL.net
Message-ID: <62a1c3$k6g$1@news.Eindhoven.NL.net>
Source record: 115055

In the new Dialer program the line for the PAP-ID has been lengthened so that it is possible to put in my rather long "jdierten@inter.nl.net" into it. However when I launch the Dialer as an ACC which I always use to do, the space is as short as before and I'm just missing one space to put the whole thing in. When I launch it as APP the space seems to be longer, but in despite of having the line correct in my dial.scr, it only shows as much as was possible in the old version. Changing it and saving results in getting an additional pap password after the id. Maybe it is possible Peter, that you have a look into this?

Hi Everyone,

Just a quick note to let you know that issue 12 of the Atari Times (UK) is
now available for download from the Atari Times homepage at the URL below.

This issue has among other things, a review of Impulse, part two of our
HTML guide and a run down of programs to make your Atari funny! You'll also
find all the latest Atari news...

Go download it now!!

I have ESS Code setup to run under Oasis (right mouse-click brings up the
menu) and I UUencode the file in question, then use Oasis's built-in message
editor to create my E-mail, and from the same editor (you don't go out of it)
you pick "insert", choose your UUencoded file, and bingo!, its in your E-mail
that easy. I also have A. Clauss's CD-Player setup in the menu so that I can
play Ozzy/Manson/Metallica in the background for that soothing and relaxing
atmospheric sensation... ;^]

My SyQuest EZ135 was literally plug-and-play. That is not to say
some optimization could not be done.

Rich.

> au CP/M. La routine TIME.C semble indiquer que l'ann?e 2099
> serait la limite pour GEMDOS:

```
> extern int time, date; /* declared in fs.c */
> if ((d >> 9) > 119) /* Warranty expires 12/31/2099 */

Once compiled ,in the roms, this gives :
asr #8,dn
asr #1,dn
because the date is considered as a SIGNED int !!!
(should have been declared as SHORT)
so this generates a BUG because the comparison
with 119 ($77) is always good when bit #15 is set !
(it ends with a comparison between $fffx an $0077)
it should have been unsigned int which would have
been compiled as LSR #x,dn........

SO, the real limit is effectively $7f years,
which is 1980+127=2107 !!
The 119 comparison doesn't work !

If you are using the TIME function in C language
this gives a max date of 1/1/1970 + 2^32-1 seconds
which is approx. 2106 !!! that nearly matches gemdos 'limit' !!

Regarding to the NVRAM capacity , you should know
that it supports two operating modes : BCD and BINARY
which means that if you use it as a relative 'date offset'
you can either have startup+99 years (2079
starting at 1980)(BCD mode) or startup+255 years
(2235 starting at 1980) (binary mode) but the day-of-the-week
value could no longer be valid (because based on a 1900 startup)
(but almost nobody uses it ??)
If you use it as absolute date (which IS NOW the case) the limits
are obviously 1999 (1900+99 BCD mode) and 2155 (1900+255 Binary mode !)
```

To be more precise, the gemdos limit is 2107
but the NVRam limit is 1999 (because used in BCD mode)!!!!
Like under all other systems using nvrams !!

As you can see a compiler bug isn't always that bad ;-))
Hardware limits are WORST !!

so long,
DAVID GODEC

the largest number that can fit in an (unsigned) seven bit number is:

binary: %1111111
octal: @177
hexadecimal: $7F
decimal: 127

As an offset from 1980 this is (1980+127) 2107

(Where does your "111" come from?)

Hi Kevin!

You'd be much better off spending a (very) few dollars on a double-sided disk drive. Most PC-types will do, even HD ones (though only in DD mode unless you undertake a hardware mod). Usually they just dropi in, but you may have to alter the length of the stand-off feet. Also, the ribbon cable goes in upside down compared to the PC!

Once you've done that you can use all modern Atari software, and can also read PC-formatted DD disks (but unless you have TOS 1.04 or later the PC won't read Atari-formatted disks, though there are utilities to convert t

Today (18 April 1997) and tomorow the Atari Shows are taking place!

Please be sure to pop in, if you can, to show your support.

Todays show is in Birmingham and tomorrows is in Osterley, London (at the Four Pillars Hotel).There is a good bar at the London show to fulfill all your refreshment requirements. All the *big* Atari-supporting companies will be there, so make sure you are. Pick up a bargain, meet the people keeping Atari alive and also many other users to swap stories with!

I got a report that the SyQues EZ gives weird results depending on a
cartridge being inserted or not. Sometimes this drive doesn't seem
capable to even report its name. There are a lot of hints that this has
something to do with an EZ firmware bug. The only thing that is sure is
that the drivers available for the Atari are very unlikely to be the
cause of (all/some?) EZ drives not working properly.
Is there anybody where the EZ works without any weird problems?

I have a EZ-135 drive on my Mega ST4 and it works great.
Just ordered a Syquest 230 meg to add more space at one time since
one company here has them for $99.95 + s/h (CompUSA).

I've been using an EZ 135 for about a year now here, and will
report that I haven't had any problems of weird behaviour at all - in
fact, I'm quite pleased with its performance. I've run it on both my
own Falcon (using HD Driver 6) and TAF's own club Falcon (using AHDI)
with impressive results and no crashing or inability to identify other
than having to change the SCSI ID. At least one guy in Toronto is
running an EZ 135 on his STe as his main drive, and another fellow is
using an EZ Flyer on his TT - both have had nothing but praise for
their drives.

When I was in the UK for the Atari shows in April I noticed a lot
of people there who had EZ135s running off their Falcons and STs as
their main drives - in fact, Joe Conner had two EZs hooked up on his
Falcon at the Atari Computing booth. It's certainly very popular there
:).

BTW, I've gotten ahold of the latest MacWarehouse flyer for Canada,
and they're selling refurbished IoMega Zip Drives (external SCSI) for
$149 CDN. If you have a SCSI-based hard drive and wanted something
for fast backups of your drives, now's your chance :)

:
: Peter, I'm having the exact same problem, and I don't have Web access. Is
: there an ftp site I can get it from? (like 128.120.234.42?) Thanks much! :)

Yes, the new copy of STING is at that ftp site (ftp://128.120.234.42). I
try to keep all the newest stuff there. It is in the "Atari" folder, then
in the "IP_Stacks" folder. There are two copies, one called STING108.LZH
and one just called STING.LZH (this is because Peter has not been putting
version numbers on the files at his site and I want to stay true to this,
but I also get confused as to which is the latest. I think version 1.08
is the latest).

I read it too with Lynx. But the guy posted Micro$oft encoded crap in an Atari NG and without any prices. Do you think someone who is wanting Pagestream ver. 1.8 is reading this NG with a win95 PC? Anyone who has used a computer that long, and posts a MS Word .doc to an Atari NG is an idiot. I'm also getting fed up with these TNEF attachments too.

This is possible even between two ST's. 'New' TOS versions should recognize a changed FAT in step 4.

While doing step 3, insert a new floppy in the ST and hit ESC.

From: roughley@HORMEL.unix.dsoe.com
Message-ID: <62d010fmc1@news.gt.ca>
Source record: 115079

I've got STinG to connect via PPP... Ping works but I get DNS errors (clients report "can't resolve hostname"). Somehow I'm very close. Three nameservers (numerical) are defined in my configuration files, too, and I've specified SMTP, NNTP hosts for NEWSie and such. Since the connection is valid, perhaps I've missed one parameter or setting? Either that or the RESOLVE.STX module has trouble with my ISP? Maybe I've missed something in the ST Guide docs?

Funny... under single-TOS, I can get the PPP connection as explained above. But if I run exactly the same STinG configuration under Geneva, the modem disconnects with the error "Link negotiation failed, shutting down". Perhaps an AUTO conflict somewhere (has to be)? (STinG is the last to boot, but I'll worry about this later and concentrate on getting things running under bare TOS 3.06.)

Promising... perhaps a long second session with STinG will get me over the DNS hurdle.

Nope..heheeh Gotcha! :)

ST Handbook, A5 and released hmm Monthly or 6 weeks about?, Glossy colour cover, slight colour content but not much.. about 45 pages and ran first half of 1994, I think 5 issues, Priced 2ukp and available through Floppyshop, Goodmans, merlin.. in fact all the top UK PD Libraries...

A collectors item then now maybe ??? :)

Okay, thanks for the info. I believe I've got the latest version now, it
does an "initialisation" phase that I've not seen in any of the earlier
ones...now I need to get the DIALER.LZH file that times out at 60 seconds
instead of 15. Any idea (keeping in mind that I don't have Web access) on
how I might get it? Thanks in advance...! :)

Hi Dan,

I just bought an Albert TT card. DOM is 91, by Dover Research Corp.
Has AlbertTT 1.2 silk screened on the card. Not very exciting (chip
wise:). It does have four GALs. Two look to be off some type of COMPAQ
video card, and two are unidentifiable (with out an E-programmer:).
Has a 64Mhz clock, but I haven't look to see if the clock is cut in
half. Mabye that is how they double the res from 640*480.

I fired up my TT the other day to do some testing. I forgot how fast
they are:). I'm going to have to install MagiC for fun..

Mike

csh@agate.net (Stinkupuss) said:-

>Same thing here... the same results as the last version: Everything
>connects and negotiates okay, but I can't ping or resolve anything. :-(

The same problem overhere too.
But I've noticed a few strange things

I had to use sting.prg as very last prog in my autofolder,
even after mintnp.prg. At first sting.prg was loaded after the
HSMODA7 drivers but before mintnp.prg which is the last prog
to load. Doing so I got however a 'privilege violation'
warning when the system tried to load the controlpanel.acc
(z-control, x-control, freedom II) into memory. With the
previous sting.prg I didn't have this problem.

Also it seems the order of which the different stx's are
loaded is important. During my first tries the resolve.stx was
loaded first but for some dark reasons the others weren't
loaded at all. So I reordered the stx's so that the resolv.stx
was loaded as last. Doing so I managed to get load all the
stx's I need.

But helas the main problem remains. I can't resolve a host.

Is this the latest STiNG causing trouble?

I found that the CACHE.DNS which was included in this package caused
Newsie to say "Can't resolve ...." . I deleted CACHE.DNS and re-booted
and all was OK. I'm now getting better transfer speeds with the latest
STiNG than I was getting with STiK.

I believe it only came out in the last couple of days. But yes, it was on
sale at the London show, and yes I bought it :)
It comes with the English manual (that apparently was the delay). CAB2 has
always had an English .rsc file all the way through it's development (I know
'cos I beta test it). It's just the manuals that cause the delay.

Basically, I bought CAB2.5 from System Solutions for 24UKP (that is the
price if you have already registered 1.5 via Interactive).

I'm not sure what upgrade prices are. You'd be better off emailing System
Solutions and asking them: sales@system-solutions.co.uk

> Something tells me chro_Magic is going to be getting in contact

Hmm. No idea. Don't even know what it is :)

There is no need to encode text, it's that simple. Encoding takes up
more space and is not readable by most newsreaders, it is pointless
sending plain text as anything but ASCII.
I notice that neither of you that think the original posting was
acceptable has actually learnt to cut the material being quoted or
understands that ammendments should be made underneath the text being
quoted.

937. Another Modem Port on Falcon?

Greetings to Atari users in comp.sys.atari.st

Awhile back I read something about a hardware project where one could
install a second modem port on a Atari Falcon 030.

If this is possible, does anyone know where I can find a text file on how
to install another modem port correctly?

Please post any replies.

>Grrr! I ordered v2.5 a month ago and still haven't received it!!!

I can understand your annoyance. I spoke to SS about 3 days ago, and they said that they were still waiting on the manuals. I ordered 2.5 a month ago aswell!! I asked if they might have it in time for the shows and they didn't know. I turned up at the show, and they did. So I bought it and cancelled my earlier order. I paid an extra 5p for the privilege (23.95 mail order, 24 at the show). But I saved on p&p. I still think SS make up the price on the day. I've bought loads of stuff at shows, and the actual price has always been dearer, but you don't have to pay p&p (just the bloody petrol to get there which is a damn sight more than 3 quid). The terms *rip* and *off* spring to mind. I used to think one of the main points of going to shows was to pick up bargains. It seems it's not anymore!

I spent probably 10-15quid petrol, got CAB2.5 and HD Driver 7 upgrade (12.50 for the upgrade, bit bloody steep if you ask me), for 36.50UKP. I also struggled to stay at the show for 30 minutes. There were bugger all vendors there. I don't think I shall bother attending another show. It's got to the stage it's a waste of time and money.

In SS's defence, AFAIK they only got CAB2.5 in within the last day or two, so it's obvious that if you did make it to the show you're bound to get it before any mail order. They did explain this to me on the phone, and I think it *is* a valid reason.

Yeah probably. And I guess I'd probably have to *buy* them. And learn to read German :(

Gary

> another domainname within the same local area, but couldn't get out of
> town:>).

This bit is very interesting. It suggests all the system is working basically.

Actually there is a neat explanation why ping doesn't work, and it in fact might be true for various people. Here in germany at least we have several ISPs, who would not provide full IP access, but only WWW access. They do it by providing a PPP/IP connection to their server, but the server won't act as a router, i.e. would not pass on any IP packet to the open Internet. Instead it acts as a HTTP proxy the use of which is mandatory.

So basically they won't accept any IP packet that is either not bound for their server, or is any service but HTTP (WWW). This would explain why ping doesn't work, it's not HTTP, and it's not even TCP, thus they would discard it instead of passing it on to cause a reply.

So if ping fails, just try to use CAB (make sure to have it use the proper proxy) at once, or contact your ISP and ask them if they are one of those ISPs only allowing WWW.

For most such ISPs still the resolve action should work. However, there is a shortcoming in the actual resolver in that it won't do recursive queries. Instead it relies on the name server to provide this feature. This is no problem with modern name servers on the ISP's side, but there might be some ISP's using name servers that are not capable of this. They have to enable UDP how-

ever so that the user's resolver can perform this.

It is rather unlikely that this is your problem, however if you can consistently resolve local domain names (hosts of your ISP), but fail on remote ones, then you should try to get a corresponding statement from your ISP, and/or start nagging Ronald Andersson to finally implement it (his address can be found in in the STING.HYP hypertext).

> I couldn't test to see if PAP works as the server dosen't utilize it.

Enable the Dialer's 'Save debugging information', and scrutinize the generated DEBUG.LOG afterwards. If it says IP connection open close at the end of the file, then you're properly connected, and don't need to worry about PAP.

Cheers Peter

Keith, I'm using an AcerView 35 UVGA monitor that I bought used, with no documentation. Two of the salesmen joined me in poring over the Nova documentation (none of us speak German) and judging by the info we were able to glean, the Acer can handle the Nova modes - up to 1240 x 760, at least.

As far as the auto folder goes, all I know is that it must be set up reasonably correct, since I can get 640x480 w/256 colors (inside the Nova cpx I can switch between 640x480x256 @ 68hz & 60hz, and 320x200x256 @70hz.

I really can't remember whether I'v tried the VMG program. I think I have (I've tried a lot(!) while attempting to prevent any irrepairable damage to the working configuration (I've had to boot from a floppy a couple of times :/ heheh)).

Same as here.. I can't ping any other adress.
No data from host.

Next point, in dialer setup dialog the path for
the dial.scr is set C:/DIALER as default.
My dial.scr is in: C:/STING/DIALER/DIAL.SRC
STinG can't save this path.

After any startup i found C:/DIALER as default again.

Somthing looks fine, i got a connect, a actuall ip, but no data.
Also my isp let me in and don't kick me out after 30 seconds ;)
But that's all, not more. What's wrong peter?

Regards, Robert

Hi

I've just been playing with PPP-Connect (that I bought at today's show,
along with CAB2.5).

I'd like to add PPP-Connect compatability to POPwatch if it's not too
difficult.

Can anyone tell me where I can get hold of the programming docs for
PPP-Connect?

Regards,
Gary

I've been using an EZ135 on my Falcon for over a year now...no problems at
all.
I even use it with CuBase Audio and have managed to do 6 and 8 track cuts
without
getting "drive to slow" messages. I don't push it however, I usually keep
the EZ135 work load to
only 4 tracks, but I have gone much higher in quick tests without problems.

As for the Syjet...no doubt that it's fast enough for anything your FAlcon
can dish out...it's faster then the jaz even...but the jaz should be fast
enough for anything the Falcon can do as well.

As a general rule...if it's SCSI, or SCSI II, it'll work with your Falcon.

Brian

Hello! I have a Cannon BJC-4200 and it worked great with my
late 520ST and still works great with my Falcon. The emulator I use
with it under the printer drivers is EPSON-LQ2500C or EPSON-LQ2500 for
black and white only. By the way it's probably great that we don't rely
on those stupid computer techs that try to condemn us for owning Atari
computers. I have many stories about the lackluster brain dead idiots
at the Boise Comp-USA store.

Bye!

I got an EZflyer today. Just plugged it in, set up HD Driver to look for the extra SCSI device, and got it going with no problems. (Well, that's not entirely true - the supplied cart. was PC-formatted, and it didn't work until I re-partitioned it using the HD Driver setup program.)

Thank you very much for all the responses on this question. So it's
quite clear now that the report about EZ problems I got seems to be
related to a very special hardware problem.

I have experienced some weirdness related to swapping between Mac and DOS
cartridges. It seems that if you swap formats in any way which is not
100% "catholic" then the Syquest goes all sullen and withdrawn. Well,
mine does sometimes: maybe this was fixed in later firmware revisions.

The closest thing I've seen, and it doesn't quite qualify as a
"batch file" but you can use the Marcel program to convert these
into RTF which MS Word will accept readily.

Yes, it works. You can use any 14400 bps modem, unless you perform a
small hardware modification tat will allow you to use a 28800bps.

> Also, are there any recomdendations for telnet and ftp software (all I'll
> need to connect where I want to) that will work via a modem? Or any other
> appropriate software. (I know about computers, but nothing about
> connecting via a modem).

You'll need either STiK or STinG for the TCP/IP stack. I'm not sure
about the telnet client, but there are mail/news/FTP clients galore and
2 major WWW packages, even if a 1Mb STFM withh no HDD is probably a bit
underpowered for surfing the web.

>
> Last question is, is it possible to connect from the monitor output on an
> ST to the SCART input of a TV?

Easy. They were even sold with those cables here in France. All you need
is the correct pinouts to build the cable. There is also a link for this
in my Quick FAQ.

Cheers

Why not 19200? That's what I am using at the moment (with a MegaST...). I
thought that was the limit without hardware modifications.

Thank you for responding to my problem as posted in comp.sys.atari
My provider doesn't use PAP_ID & PAP_PASSWORD ---could that be the
problem.I have attached a BEBUG.LOG,with MTU set at 1500 according
to my provider.PAP* left blank.When I go into my STing Port Setup CPX
I noticed that shows CENTRONICS in the box.I have tried putting it to

Modem 2 and saving it without any luck.
I tried sending this info to Peters e-mail address but it keeps
getting sent back so I hope you all don't mind if I post it on the
atari sig. Hopefully he will see it here and be able to help me out!!

973. Vintage Mac stuff for Atari

Newsgroup: comp.sys.atari.st
Date: 1997-10-20 00:00:00 UTC
From: malyszka@dreamscape.com
Message-ID: <malyszka-2010972052160001@sa4-p21.dreamscape.com>
Source record: 114902

I have the following assorted Mac stuff...

512k-perfect working order with case in good condition, no hardware modifications. Only flaw is the internal 400k drive does not eject disks. I have either a keyboard and mouse with it.

512k-power supply comes on and nothing else. This has been taken apart and the case is not put together right. Might just be loose connections inside, but i"m not sure. **Internal 400k drive works fine**

Old Apple 2400 modem with AC adapter and serial cable

Old style (read pre-Plus) external 3.5k disk drive. Case is fine but drive does not eject disk.

I also have lots of software and a few other odds and ends around. I'm switching to a PC for specific applciaitons.

Would love to trade any of the above assorted "stuff" for a 16 bit Atari. I'm not too picky but will negotiate by model you have. I'm generous, don't worry.

This is because you haven't read the docs. The Dialer looks in the
directory which you've put into DIAL.INF. I'm sure in your case it
contains "C:\DIALER\" and not "C:\STING\DIALER".

> Somthing looks fine, i got a connect, a actuall ip, but no data.
> Also my isp let me in and don't kick me out after 30 seconds ;)
> But that's all, not more. What's wrong peter?

Maybe you've got one of those ISPs I've mentioned in my other message
in this thread. I found out that those ISPs are in fact rather popular
amongst regional ISPs. If yours is one of them, you can simply start up
CAB, and if STING is configured correctly you can at least surf to your
ISP's homepage, eben though ping doesn't work.

Cheers Peter

There is indeed a lot of technobabble there, but very little that is of
interest for STinG/STiK/MiNTnet or other IP stacks.

> This is what they use, probably other provider use that too, It would
> be great if perot could check that site out, that might contain some
> interesting clues.

I've read a fair bit, but only came to the conclusion above. Their server
machines seem to be able to do virtually everything, so in fact it's back
to the ISP's how they configure the beast, to check what causes trouble.

Cheers Peter

I replied to you on this one on Red hot, but of course that board's bit the dust
and no doubt you didn't get it. I'd say with what you've got to offer, you
could get about $400 or so if you hold your guns... that PS3000 being a nice
nugget in the mix, after all, Atari didn't make many of them little gems.
Perhaps if you had a spare DS drive mech to throw in the PS3000 in place of the
SS drive in there, you could score an extra tenner for it... %]

I know it's a crying shame, considering how much you no doubt paid for all that,
to only get that much... but that was then, this is now, where things like
harddrives for instance come a dime a dozen...

My reckoning is that it's because you can't buy a 19,200 baud modem. A 14.4K modem with v42/v42bis will support thoroughports of beyond 19.2, but most transfers from a single-user client (i.e. a BBS) would probably range in the 1700 bps range, and without hardware upgrades as probably explained ad nauseum on a number of FAQs and FTP sites, you just can't go beyond a 19.2KB DTE rate with a stock ST/STe (Mega's included).

Alas, I couldn't find me a Falcon to get me on the Web. I know CAB is quite an impressive piece of software, but my old STe would never be able to handle what much of the web can offer. Alas, I now rot my fingers on one of THOSE machines. But I will vow to NEVER use Microsloth IE. At least that should buy me a LITTLE redemption around here.

Maybe?

HS>GemJing v1.04 (now v1.06) and most docs to these were the German
HS>versions rather than the english ones that accompany the Interactive
HS>releases.

Hm? A friend of mine wrote an English manual for GEMJing. I don't own an English version of CAB, so I don't know whether the delivered docs are German or English.

Nevertheless: http://members.aol.com/hoffart/software.html gives you the international version of GEMJing - with docs in German, English and French and resource files for many other languages.

The supposedly latest version released as PD by C. Edwards
is dated 30.4.96. of size 516374, and is the one I have released
to funet, ibp and umich as rftrd2qn. I have a version that was prepared
specially for me to translate TeX files and is dated 17.6.96
with a size of 521828. Yours does seem even later!!!

Boris.

Computer Direct is "across the pond"...

Despite Paul seeming to enjoy hs first show visit for a long while when he exhibited in Brum last year he seems reluctant to make it a regular occurence. In the absence of any other distributors it looks like we have to go direct for all upgrades here in the UK.

A shame, because I'd brought my disks to Brum in the hope of upgrading to the CD version this time. I rarely get around to upgrades outside of showtime...

Source record: 114915

On 19 Oct 1997 13:14:15, "C.A. Wiebering" wrote:
}Is there any software for the Atari ST that enables it to exchange data
}with the Psion Series 5 computer?

Well there IS software to this with the series 3 and 3a and, included
in the docs. there is a registration form with a space for upgrade or
inclusions requests to the author. I have contacted him to see if it
is possible to use this program with the Sienna so if you were to do
the same for the series 5 perhaps this would encourage him to revamp
the program. Of course it may well be compatible with both these
machines as it is, who knows?

Find this software at.
ftp.uni.paderborn.de/atari/tools/dfue/s3-st200.zip

or your nearest mirror of the above. Hope this helps and you could
let me know if you are successful :-)
Thanks.....

It's depending on what type of monitor you're using (and which Nova card you are using as well) but I have collected a whole lot of .BIB files for various monitors which I can binmail to you. I suppose you have the 2.6 version of the NOVA driver as you've got it running at all with MagiC.
I use a SuperNova on a 21" Eizo 6500 in something like 1200x960 on a TT with MagiC 5 and NVDI. Some (most of?) the resolutions in the release package was not usable on my monitors either but I found some useful BIB's on the "Sonder" disk I bought additionally. Most useful is the BIB's I've collected from other NOVA users.

.. so have they replaced the staff?
Why can't they be more accurate about availability rather than always "+ 2 weeks"?
Why don't they satisfy outstanding orders before selling the product OTC?
Why can't they answer e-mails?

It's not just that they are slow that annoys me.

From: arthurm@zetnet.co.uk
Message-ID: <877371582_OASIS_@zetnet.co.uk>
Source record: 114922

I've just been playing with Adobe something or other on a friend's PC, with a colour scanner, to scan in and retouch colour photos for DTP work.

What I want to know is what do I need to do (and pay) to upgrade my gear to be able to do the same kind of work on my Atari? I currently have a 4 meg Atari STFM, hard drive, HD floppy and work purely in Hi Res.

Can I possibly work in HI Res in Colour and is it cost effective to upgrade that far, or should I buy the dreaded PC (mouth washed out with soap). All advice welcome.

Hi Mike,

That would be a way to transfer small video clips, but it would take a long time to do large video clips. I'd like to load a complete video clip into Apex Media, then do more editing and etc. with the fine tools available. Then save out to the .FLC video format.

Also since VideoMaster Falcon does video and sound quite well. It would be nice to save video and sound out to an .AVI and .MOV format. Now that there are a couple of programs available that will play these video/sound formats on the Falcon.

What format do you initially save the images out in?
Is it really so perculiar to TruePaint?
Can't TruePaint save straight to TGAs, there by missing out the TPI
step? That is assuming I understand you correctly.

As an aside I think GemView will load TPIs so you can batch convert
them to any format it can handle, including TGAs.

Rich.

Long Post Warning!!

Peter, I tried to send the info to your E-mail address and Oasis/my ISP did
a "gateway refused" over and over so I'm sending it here. Sorry! :)

Okay, I re-installed it following everyone else's advice, and I can now
logon at 28800, goes all the way through the logon process, tells me that
the initialisation is a success, and I can ping with all packets sent and
received at 127.0.0.1, and at 204.71.75.133, but please note that my modems
send and receive lights do -not- flash when I ping anything. I tried running
a few things like Finger and Newsie, but both gave "unable to resolve" msgs.
When I tried resolve from withing STing, it would do a digital number, and
give the "canonical number is" report, but would tell me it was unable to
resolve if I typed anything in like "campus.mci.net" I don't think its quite
right yet (my settings I mean), because the DEBUG.LOG doesn't say close after
I logoff. Anyways, here is my DIAL.SCR, DEFAULT.CFG, and DEBUG.LOG files.
Any and all help would be most appreciated...! :)

PS I tried CAB v1.5 also, but it error'ed out. I don't
think I have a new enough version of CAB.OVL. What
version should I be using? Thanks again! :)

Arthur,

On the software side there is Positive Image and Photoline. PI is reasonably priced, but a very basic program. Photoline is rather expensive (for an Atari) about US$200, and some say it is quite powerful. I have not had luck with it. The manual is worthless at best. The program itself is not intuitive to use. Several people I know have spend quite a few hours with it without figuring out how to use many of its features. My advice is to stear clear of Photoline.

In short, there is no software that can match or even come near Photoshop on the PCs.

John

Source record: 114932
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings..

I'm having some trouble with my setup. It was working just swell, but I decided that it was time to backup everything and repartition my drives (if it ain't broke..). Well, after doing so, Cubase Audio Falcon doesn't work!!

Strangely enough, the ADATREC program that records from the ADAT interface DOES work! The audio is fine from that program. But when I try and load a file into CAF, bomb city.

I'm using the following (although disconnecting everything and running with nothing in the auto folder didn't help):

14 megs RAM
1 gig Toshiba drive
2.1 gig Seagate drive
jaz drive
HDDriver 5.10
CAF 2.06
NVDI 3
Screenblaster 2
FDI init
SoundPool ADAT interface
Steinberg FDI

When I repartitioned the drives, I partitioned them into 400 meg partitions using HDDRIVER, with the 'minimum sector size' checkbox checked. Before, I had 255 meg parttions. I even tried repartitioning one of my drives to 255 megs, to no avail.

Are there any SCSI settings in HDDriver that I could have screwed up? There seem to be no other SCSI problems, as copying files works fine, as do all other programs I've tried running from SCSI..

Is there anything I may have forgotten? Is it possible I have a funky virus? Can anyone point me in the direction of some good anti-virus software for the Falcon?

Any ideas would be greatly appreciated!

-Mark

Don't forget that if you have an STe you can also use TUS's IDE host adaptor
and a 2.5" hard drive (or 3.5" with a small adaptor). I haven't heard any
complaints in the 4 months they've been on sale.

->> >
to> What are the details/specs of this card supposed to be?

The details that I'm certain about are as follows:

68020 processor running at 16MHz. Trials will continue to get it to work at 20MHz but these are continuing atm. Reliability will be essential so if it doesn't work at 20MHz it will only be released as 16MHz.

Target date is 1st December 1997.

Email Dave Escott (I *hope* it is a reliable address) at:

dave@tusdev.demon.co.uk

and he says he'll reply when the product is available. Tell him I sent you (seeing as I had a long chat about it with him on Saturday).

Obviously it's for use with a 68000-based machine, but I'm not clear whether it's for both STFM and STe atm. Certainly he prefers working on the STe (which is the only machine that his IDE host adaptor works on) but this one might be different. Maybe Dave Hollis could clarify that one?

TUS seem to be a reliable firm - they've delivered on everything they've promised up to now...

1009. Audio Hard Drives ?

Newsgroup: comp.sys.atari.st
Date: 1997-10-20 00:00:00 UTC
From: claytone@aa.net
Message-ID: <877318024.628071@moon.aa.net>
Source record: 115119

Hello Atarioids,

(I THOUGHT I posted this a day ago, but since I haven't seen it appear I'll try again. My apologies if I've repeated my posting.)

I'm looking into buying a SCSI drive for audio recording with my Falcon, and was wondering what experiences other people have had with different brands/ models, etc., good or bad. Possible questions:

What brand?

What model?

Size?

Access speed?

Transfer rates (in both synchronous and asynchronous measurements if you have that info)?

Is it "AV" rated?

How many tracks were you able to successfully play back at once?

How noisy?

Any other info you can think of would be helpful - or if you can recommend a web address that would address this topic. Claes's page had some good info on it.

Please post any replies on the newsgroup as I'm sure there are plenty of other people that would appreciate the info.

Thanks! - Clayton Murray

Of course, it's always dangerous to make this statement three days before an
Atari show... B^{)

r> They are going to look a bit silly if 2.54 is current and they have
r> boxfuls of duplicated 2.50 discs :-(

They seem to do their duplication on demand to prevent this being a problem,
but it's true that the package I finally got hold of was v2.5 and not
anything newer.

That said, they were also still including HSModem 6 (currently 7), GemJing
v1.04 (now v1.06) and most docs to these were the German versions rather than
the english ones that accompany the Interactive releases.

The only item that seemed to be newer than what I had was Bubblegem, even
though the docs were the same. Is there a new version of 15/10/97?

>
>Rich.

Hi Rich,

The only way I got anywhere with this problem was to save out the individual images, which you have to use TruePaint to view and save to *.TPI with.
Then convert the TPI from True Paint with TrueImage to *.TGA (or whatever). That was the only way I could maintain the proper image file. Number the files in sequence and Apex will auto load them. It's a lot of work.

Mike

b> If only it was available...

Who says it's not? It just missed the April Atari shows, but in the 4 months
that it's been on sale Dave tells me that he's sold 240 units with no
failures (just two installation errors by users). It's for sale and seems to
be successful - I haven'theard of any complaints.

>> p> Best Atari supporting company of 1997
>> T.U.S.
b>
b> If only they answered email...

This is strange and something I forgot to ask about (I've heard the complaint
before). However, he did say that if he was given an EMail address he would
contact all people interested in the 68020 16/20MHz accelerator when it
becomes available in December.

>> p> Most exciting announcement for Atari owners in 1997
>> T.U.S. accellerator card comming soon - T.U.S.
b>
b> WENsuite ?

With CAB already being available I'd say that a sub-100ukp accelerator for
the ST would be a more significant upgrade.

Wanted (Montreal QC):

* ET-4000 graphics card.
Optional: ET-4000 adapter card for Atari TT030
Optional: NVDI 4.11 with ET-4000 drivers (Atari)

* SCSI CD-ROM.
Panasonic or similar brand.
8x or faster.

* SCSI hard-disk.
256 Mb to 500 Mb capacity.

* External SCSI Case.
Enough space for 2 devices.
Maximum 4 devices.

Boxed new or under warranty from reputable 2nd-hand shop is
prefered (especially if you live outside the Montreal area).

Browse my Homepage for some Atari hardware I no longer need,
if you're interrested in trading instead of buying/selling.

Please reply through e-mail. Thanks.

From: agt3@york.ac.uk
Message-ID: <62fdru$e4m$1@netty.york.ac.uk>
Source record: 115130

Hello, I hope these aren't questions that would be answered by the FAQ, but here goes...

I have a 1040 STFM I use for sequencing and MIDI, but fancy connecting it up to the phone lines to get some internet access. I presume that a modem would connect to the serial port, but does anyone have an experience of doing this? What speed of modem could it handle? Are there any nasty surprises?

Also, are there any recomdendations for telnet and ftp software (all I'll need to connect where I want to) that will work via a modem? Or any other appropriate software. (I know about computers, but nothing about connecting via a modem).

Last question is, is it possible to connect from the monitor output on an ST to the SCART input of a TV?

Thanks

Aaron Turner

I have a selection of Atari ST titles for sale.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) £3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) £4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) £5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) £5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) £5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) £5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) £2
Ballistix (1d,ss) £3
Superleague Soccer (1d,ss) £3
T.V Sports Football (1d,ss,nb) £3
Vector Championship Run (1d,ss) £3
Top Shot = Kick Off + Extra Time. (1d,ds) £4
Graham Gooch's World Class Cricket (1d,ss,meg) £5

SIMULATIONS

Lotus Espirit Turbo Challenge (1d,ds) ..... ◆2

>surprises?

An unmodified STFM will only support 19k2 on the serial port so you
would be wasting your money getting a modem faster than 14k4.

A very simple mod to the STFM (see FAQs) will raise the port speed to
38k4 when you can use a 28k8, no bother.

>Also, are there any recomdendations for telnet and ftp software (all I'll
>need to connect where I want to) that will work via a modem? Or any other
>appropriate software. (I know about computers, but nothing about
>connecting via a modem).

You will need HSMODEM v7 to straighten out the serial port driver in
the operating system.

STiK or STiNG to manage your TCP/IP link/stacks. STiK does SLIP, STiNG
will do SLIP or PPP.

CAB as browser. Newsie as news reader/e-mailer/ftp client. There are
telnet and IRC clients around but I don't use them.

>Last question is, is it possible to connect from the monitor output on an

Clayton Murray wrote in article <877318024.628071@moon.aa.net>...

>I'm looking into buying a SCSI drive for audio recording with my
>Falcon, and was wondering what experiences other people have had with
>different brands/ models, etc., good or bad. Possible questions:
>
>What brand?

I use a Conner CFP2105S (2.1GB SCSI), which works fine. Most Seagate drives over 1GB work fine too, according to my tests. Quantum Atlas works, but not Fireball (the Fireball SCSI-drives work fine with the Falcon, but not when you try using Cubase Audio - don't ask me why...).
I've had much trouble with IBM drives, so I'd avoid those.
I've also tried using a Jaz-drive (1GB exchangable), which worked perfectly.
By the way: I'm planning on getting a Jaz-drive myself, but some other things in the studio have been more needed...

>Access speed?

Just about any SCSI-drive that's 1GB or more can cope with the needs for HD recording, but about 12ms access time or less if you want to have a figure.

>Transfer rates (in both synchronous and asynchronous measurements if
>you have that info)?

Since the Falcon's SCSI-port is limited by the hardware to a maximum of 2MB/s, this question is of no interest, since all SCSI-drives today are much faster than needed.
If you use the standard AHDI-driver, you'll get a transfer rate of about 1.5MB/s, but with HDDriver I'm up to about 1.9MB/s (when tested with HOWFAST).

>Is it "AV" rated?

No need for AV-drives - they're just more expensive.
Just make sure that the drive doesn't do thermal calibrations (many Quantum and Maxtor drives do), since if they do, they're unusable for HD-recording - you'll get a "HD too slow" message when working and that's NO FUN AT ALL!

>How many tracks were you able to successfully play back at once?

All 8 - at all times.

>How noisy?

My Conner is very quiet. Quantum drives tend to be rather quiet too, but Seagate have a whining noise that you wouldn't want on your recordings if you have a microphone in the same room...

>Any other info you can think of would be helpful - or if you can
>recommend a web address that would address this topic. Claes's page
>had some good info on it.

Well - since you've already looked there, what's to add? ;)
I'm not sure if the DOITF030 pages have some other info about HD's, but
maybe.
Maybe Uwe Seimet (who really is one of the BIG experts on HD's) will answer
this too...

Best regards
Claes

CAB.OVL V1.2618 works far better with CAB V1.5 than the older CAB.OVL V1.25.
I had loads of problems with it, especially while using STiK. I managed to
get 1.2618, then got STiNG V1.00, V1.02, V1.06 and V1.08 and they've all
worked very well with CAB (both 1.5 and 2.0 demo).

1029. MagiC 5.03 50hz on yanks 'puter

Newsgroup: comp.sys.atari.st
Date: 1997-10-21 00:00:00 UTC
From: warpstar@typhoon.xnet.com
Message-ID: <62h3lgkg2@flood.xnet.com>
Source record: 114935

I installed MagiC for the first time on my STe. It happens to be version 5.03. My monitor expects to be driven at 60hz, because I'm in the U.S.of A. It came with the Magic 4.x manual, which I didn't mind. What I do mind is that when the machine comes up in MagiC, the screen rolls, which means its driving the monitor at 50hz. So, I booted with a floppy, ran a program on the ICD disk to get at the hard drive, and then changed the name of the program which activates MagiC, which is in the AUTO folder. That is how I am now sending this message to you tonight. Any suggestions?

Jason (Warpstar) Damisch

>By the way, the real limit comes from the NVRAM who are in the
>computer: fo Falcon, it's the date of starting up plus 100 years, so
>more than 2092: that's good, isn't it?

If you talk about the Motorola Real Time Clock (with NVRAM) chip,
there is no such limit. The start year is 1968, there is one byte for
the year (used as binary value not BCD), so it could go until 2223 if
only the Gemdos could drive so far. So the limit is still Gemdos's 2107.

Bye, Bruno.

1032. Help set gem env.

Newsgroup: comp.sys.atari.st
Date: 1997-10-21 00:00:00 UTC
From: willard@headwaters.com
Message-ID: <62j12t$qu3$1@newsbell>
Source record: 114938

Hi;

I'm trying to get STfax to run as an accessory. I need to tell gem
where the support files are. I'm running Neodesk 3.x and it doesn't seem
to work following the STfax instructions.

should be something like gemenv STFAX=f:\stfax\

this doesn't seem to work.

Any help appreciated.

"centek" <centek@eeb.fr> said:-

>If you are using the TIME function in C language this gives a max date
>of 1/1/1970 + 2^32-1 seconds which is approx. 2106 !!! that nearly
>matches gemdos 'limit' !!

Depending on the library, many C compilers go until 2037 only,
because the seconds count since 1970 is a signed long.

>Regarding to the NVRAM capacity , you should know that it supports two
>operating modes : BCD and BINARY

If you talk about the Motorola RTC chip as used in the Falcon, it's
working in binary mode.

>which means that if you use it as a relative 'date offset' you can
>either have startup+99 years (2079 starting at 1980)(BCD mode) or
>startup+255 years (2235 starting at 1980) (binary mode)

It's used by Xbios as starting in 1968, in binary mode, giving a max
year of 2223, limited by Xbios (and Gemdos as well) to 2107.

>but the day-of-the-week value could no longer be valid (because based
>on a 1900 startup) (but almost nobody uses it ??)

The day-of-the-week value is valid if you put in a valid value ;-)
It's only a counter increased every day, and going back to 1 after 7.
You can change it simply by writing the relevant byte, without changing
any other value. BTW 1 seems to be Sunday.

In fact the RTC chip has no base year by itself, it's just important
that the given year is leap (to keep next leap years synced). It's the
way it's used by Atari ROMs that give it 1968 as start year.

>If you use it as absolute date (which IS NOW the case) the limits are
>obviously 1999 (1900+99 BCD mode) and 2155 (1900+255 Binary mode !)
>
>To be more precise, the gemdos limit is 2107 but the NVRam limit is
>1999 (because used in BCD mode)!!!! Like under all other systems using
>nvrams !!

Really? You must be talking about something else, because all this
is false or unrelevant in the case of Falcon's RTC.

Bye, Bruno.

Source record: 114940

I just wanted to personally thank Peter R. for all his help...Unbelieveably, he called long distance from Germany to my ISP in the US, to try and help me with my STing problems!

Peter, I think the DIAL.SCR you sent me is working, but I do have a couple of questions. So I'm better off not using PPP (because of the Trumpet Winsock thing?) with my ISP? I had tried SLIP with STIK before, only to have my ISP tell me it couldn't be done because while SLIP is on their menu, it wasn't actually a supported option! (actually using C-SLIP, right?)

Now, let me say I haven't RTFM on these programs, I just tried to use them for a short while today...(Darn it, I was so excited after seeing it logon correctly!) Anyways, when I tried to use Newsie v.80 and Popwatch, I used the connect to host option from each menu, they both appeared to connect, then they both asked me for a password, I typed in my password I use to logon with, and they both reported that the password was rejected by the host, then they terminated with an "eof from host" message. Any ideas? Is this something I have to edit with those STIK options at the end of STings DEFAULT.CFT file? Thanks in advance to everyone, especially Peter! :)

PS I still can't believe he called long distance
to help me! Only in the world of Atari users!

I reckon you haven't used the e-mail address from my signature, but instead blindly posted to the From: address ? I used to not include any Reply-To: into my messages, for avoiding to attract SPAM. It worked rather well, but since people seem not to be able to read my signature, I'll revert to the Reply-To: tag and try to not get to upset by the SPAM that will unavoidably result from that. :-(

Don't confuse phone line speed with the speed of the computer modem
connection !! The latter can only be up to 19200 bps, but the phone line
speed is only limited by the modem and the phone line, not the computer.
You can use a 56400 bps modem with your ST, however you waste a lot of the
speed.

> surprises?

Sure, no problems. It handles all sorts of modern modems, as the modem will
adapt to the speed of the computer's port. Set the latter to 19200 bps, 8 bits,
no parity, one stopbit (use my SERIAL.CPX for this).

> Also, are there any recomdendations for telnet and ftp software (all I'll
> need to connect where I want to) that will work via a modem? Or any other
> appropriate software. (I know about computers, but nothing about
> connecting via a modem).

You can find all the required software on my web page (see signature). Telnet
and ftp are fine, but for WWW you'll need at least 2 MB of memory.

Download STinG, HSMODEM, ST-Guide (for reading the docs), and TelStar (Telnet
client) from my web page, and follow the link to Flinny's web page to get an
ftp client.

> Last question is, is it possible to connect from the monitor output on an

```
On 17 Oct 1997 20:33:59, Clair Shaw wrote:
>
> In order to complete a program I have been working on, can anyone please
> tell me how to save and print the screen?

To print the screen you could call scrdmp(), which is the ALT-HELP function,
using the following code:

HIDEM ! hide the mouse, unless you want it printed as well.
~XBIOS(20) ! calls the same routine as alt-help
SHOWM ! show the mouse again.

This would give the same screen dump as pressing alt-help, and can be
stopped by pressing those same keys.

As for saing the screen, that depends on the format you're wanting to save
it as. For Degas, I'd use the following:

PROCEDURE save.degas.screen(fname$)
'
' This is suitable for any NORMAL ST screen. It isn't able to cope with
' extended screen modes. It can't cope with TT or Falcon screen modes that
' don't have a co-responding ST mode.
'
' It only handles 320x200 (16 colour), 640x200 (4 colour) and 640x400 mono
'
' fname$ contains pathname to save screen to WITHOUT the extender
' this is added here.
'
' Use res& and i& as local variables
'
LOCAL res&,i&
'
' Get the screen res, using GETREZ (xbios 4).
' When using a Falcon, TT, or ST (with overscan) this will not return
' the correct value, resulting in a corrupt file.
'
res&=XBIOS(4)
'
' Add the correct extender for the screen res
'
fname$=fname$+"PI"+STR$(res&+1)
'
' Open the file. I used #99 since most people use low numbers for file
' handles.
'
```

```
OPEN "o",#99,fname$
'
' convert res& to a 2 byte string. Equates to CHR$(0);CHR$(res&); but is
' quicker(???), takes up less space and is more readable(?).
'
PRINT #99,MKI$(res&); ! tells Degas the sreen res
'
' Read the hardware colour pallette and save it as 2 byte integers. These
' are read directly from the hardware registers.
'
FOR i&=0 TO 15
PRINT #99,MKI$(DPEEK(&HFFFF8240+MUL(i&,2)));
NEXT i&
'
' Store the picture as one block. It uses the physical screen, instead of
' the logical screen, since that one is displayed when the logical and
' physical screen addresses are different. To save the logical screen,
' use XBIOS(3) instead of XBIOS(2)
'
BPUT #99,XBIOS(2),32000
'
' The next bit, although not neccessary, has been included. It is only
' used by Degas Elite.
'
FOR i&=0 TO 7 ! add the colour animation info (blanked)
PRINT #99,MKL$(0);
NEXT i&
'
' Close the file.
'
CLOSE #99
'
' Done it :-)
'
RETURN
```

This will (should) read the screen resolution and create the correct file for that resolution.

Before I start, I'm using an 520STE, but the info here was compiled with help from a snippet of info in ST Format Issue 47. The info there gave connection details for a Falcon to VGA monitor, as well as the Falcon pinouts. From this info, the following was worked out:

Falcon pins ST Monitor pins

1 (Red Output) ----- 7 (Red Output)

2 (Green Output) --- 6 (Green Input)

3 (Blue Output) ---- 10 (Blue Output)

5 (Ground) --------- 13 (Ground)

13 (H Sync) --------- 9 (H Sync)

14 (V Sync) --------- 12 (V Sync)

I'm not sure as to whether pin 19 (MO) needs connecting to GND, or if it's there to tell the Falcon it's connected to a VGA monitor.

With any luck this should be what you're looking for.

I've just replaced v1.06 with v1.08 and have found a could of things have changed between 1.06 and 1.08.

First, the trace-route in the new dialer doesn't want to show anything but numeric IP addresses.

Secondly, when booting up, I now have DNS cache errors even though the DNS cache file is there. Now, is this because I set the DNS cache to 128 entries instead of the 64 entry default, or something else?

Other than these couple of points, it seems as though it's a touch quicker. There are still times when it seems to pause for thought before continuing, but these seem to be less often.

Thanks for your help. I found the info in DOITF030 - and set to work
with the soldering iron. The place I'd been going wrong was not
connecting the "monochrome detect" to pins 18 and 19 (the ones marked
M0 and M1 in the Falcon manual - very helpful!) of the DB19 connector.
Once I did that, the old SM124 sprang into life - big borders and all!

I spent over two weeks with the VMG program before I was happy with the
display. This included a number of different resolutions. Although it's
somewhat intimidating, so long as your monitor's maximums are set
correctly in the VMG, you can experiment without worrying about things
blowing up.

Well, in case of the ZIP drive reformatting may be necessary if you want
to use the ZIP disk with the DOS/Mac-software for your own purposes. But
I suppose the Jaz drive won't come with a 1 gig installation medium which
is write-protected ...

Ciao

My guess is that GEMDOS t reats the illegal VFAT entries as "free", and use them for new entries. Win 95 then gets very confused, and if you then add one or more files to the disk, it's unreadable by both Win95 and GEMDOS. This happens all the time if I'm not careful. It might depend on which "service-pack" (Microsoft's name for bugfixes. According to them none of their product has bugs...), I don't know.

Thanks for the response Uwe and Fpinto..

Actually, I solved this problem myself! Believe it or not, CAF 2.06 will NOT WORK PROPERLY with the latest version of MROS (at least not on my system). After messing around with my system for days and not getting CAF 2.06 to work properly, I tried earlier versions off floppy.. they all worked! So I knew it was something in my Cubase setup. I had updated a few drivers in my MROS folder (including MROS 3.43 to 3.45) and when I went back to the earlier version, all is well. I can't believe it.. how can the latest version of MROS not work with CAF?

Anyway, beware when updating..

Uwe, how can I update from HDDriver5.10 in the US? I read somewhere that Computer Direct wasn't handling that anymore.. true? If not, can I get it through ATY computer in Oakland, or do I have to order overseas?

-Mark

Hi Arthur.

There are some options... the choice depend on what you want to do
and how much $$ you want to put in.
There is Positive Image that will work perfectly in your system,
and have all the basics for image manipulation and some retouching. It's
rather slow even in my Falcon, but a new version (2.0) is about to be
released that claims to be faster and using the Parx system extensions.
One of the big plus in this program is the manual, that is very
comprehensive and easy to use. The price is not bad.
There is Photoline that is much more photoshop-like. It is
amazingly fast for all operations, and with a lot of functions for image
manipulation and retouching (I did only play with the demo tough). This is
more expensive, but if you will be doing a lot of processing, it worth
IMHO.
This two programs have demos available, so you can give them a try
before taking a decision. For PI, check on the ComputerDirect page, and
for Photoline check in the Homa systems site.

Also there are Studio Photo and True Image (and surely others that
escapes from my knowledge), but I have no experience with them so can't
comment here.

Best regards.

Daniel.

PD. You can avoid the Wintel empire this time ;-)...

However, that means that you cannot use a Jaz drive on an Atari,
write files to the disk, etc., and then public it into a PC
and read the same disk as it was on the Atari?

If you need DOS compatable disks, you can use BigDos and HD-Driver
toghether and do so. I "think" MajiC may offer some extra flexability
in this area as well, but I'm not sure about this as I don't have MajiC.

2100? Perhaps because that's not a leap year, but the Atari system
(both Gemdos and Falcon's RTC chip, don't know for the IKBD) will think
it is.

Nostrodamus phrophesised this from c.a.wiebering@wmw.utwente.nl to All...

Hi Kees!

caw> Is there any software for the Atari ST that enables it to exchange
caw> data with the Psion Series 5 computer?
All you can do is to use a terminal prog on the Atari (TeddyTerm or Connect
are good) and the built-in comms prog on the 5.

If you're good at writing scripts you might be able to automate backing up
and such, but you won't be able to do any file format translations.

Speak to 'ya later!

Re: http://www.users.zetnet.co.uk/rgoring/support/

The above site has been set-up by Roy Goring to feature as updates for
and amendments to the ZetPack.
This page calls itself "The Zetnet Atari Support Page".

UNDER NO CIRCUMSTANCES should this page be confused with the Official
Zetnet Atari Support Page located on AIBS.

Despite a SEVERE case of toe-treading which is somewhat tolerable
considering the very nature of the intentions, there is no reference to
the Official site, no mention of this being an unofficial update site, no
link to the official site, no mention of official user support, no
information of the official line on any of the software plus despite
claims is actually distributing older software than the official site.

This is exceptionally unacceptable and cannot be tolerated.

Therefore please consider this informal notification to Roy Goring to
amend those pages in question appropriately and not to promote them in any
other light than that that they ought to be.

I would be grateful if this could be posted into zetnet.help.atari for me
as I have no access to that newsgroup at the moment.

I appologise for the length of this announcement but it IS relevent and in
my opinion reasonably vital.

Queries to be directed to dhend@zetnet.co.uk or
owner-zetnet-atarians@spodden.zetnet.co.uk please.

yours etc.

>in the CPX even after I choose Modem 2 and save it!

Don't worry, Ron !

Select Modem 2, in the "adressing" window, just set the MTU value
given by your provider (using a terminal prog like Connect).
Then, select the "general" item: choose your connection type, then
save the STING.PRT file in your CPX directory.

That's all !

>So I'd like some advice on the buffer sizes in the serial.cpx and the
>"delay" slider in sting.cpx. And anything else to make the most out of
>it...

Have you installed HSMODEM v7 in your auto folder ? If not, do it at
once, then set your MODEM.CPX at 57600 bauds (it seems that, at a higher
speed, client programmes like CAB or NEWSie just do not respond).

You should then be able to get connections at up to 31200 bauds.

I've left the "delay" at 50. No problem: I get a very fluid
data-transfer, with no annoying "pauses" between packets.

Another thing: don't hesitate to use a proxy-server with CAB: it
improves *a lot* downloading speed ! (ask your provider to give you
their own proxy adress and port number.)
A shame NEWSie doesn't (yet) allow the use of a proxy !
But I'm sure John Rojewski will soon find a remedy... ;)

1066. Using PPP connect with Demon..

Newsgroup: comp.sys.atari.st
Date: 1997-10-21 00:00:00 UTC

Source record: 115012
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Hi all,

I suppose it was inevitable really. I've just got CAB 2.5 and PPP-Connect but I'm having trouble connecting with it (PPP Connect, that is).

I can get the connect program to dial-up and login OK, then it initiates sockets and negotiates a PPP link. Then it says 'Get IP' and it crashes with two bombs.

I have a static IP address, which I have entered into the config program, so is it crashing because it's trying to get a dynamic IP address when it shouldn't ?

I'm also more than a little confused about the RSDAEMON program. Every time I try to exit from the connection program (or I get the two bombs after trying to connect), it loads this program and then just does nothing. I couldn't find a mention of this program in the manual.

If anyone could help, I'd be very grateful. Otherwise I'll just keep using STiK :o)

Thanks,

See ya,

Mark.

1068. CAB 2.5 (English) Release Info from System Solutions

Newsgroup: comp.sys.atari.st
Date: 1997-10-21 00:00:00 UTC
From: Terry.May@rebel.ronly.org
Message-ID: <65a_9710211447@ronly.org>
Source record: 115014

```
---------------------------------------------------------------------
SYSTEM SOLUTIONS - PRODUCT RELEASE INFO Date: 21. October 1997
---------------------------------------------------------------------

CAB 2.5 - The world wide web browser for all Atari users.
The taxi for the Internet data highway.

Who said you can't get on the Internet with an Atari?
-----------------------------------------------------

System Solutions has just released a new version of CAB - the Atari
Crystal Browser program at the UK Atari Showdays 18/19 October 97.

CAB 2.5 is faster and is more efficient in its memory usage. To make
connection to the internet as easy as possible a program called
ICONNECT has now been included. ICONNECT uses the PPP and SLIP
protocols and can be configured with a lot of parameters, so that you
can "write" a connection script by simply clicking on parameter boxes
and entering the necessary data.

PPP-Connect
-----------
The PPP-Connect for CAB has been specifically written for MagiC to
implement a TCP/IP stack and internet access via the PPP and SLIP
protocols.

The PPP protocol is now used by the majority of ISP's (Internet
Service Providers). PPP-Connect can access the internet via
Compuserve (CIX) or directly to Internet only ISP's like AOL, Demon,
Pipex and others.

PPP-Connect is the most user friendly internet software we have seen
to date. Easier to set up than what we have experienced on the PC's
and the Macintosh! And to make setting up even easier, we are
currently building a set of prepared connect scripts for the most
common Internet Service Providers. So, all you have to do is to set
up your modem, type in your user ID, password and if necsessary
change the access telephone number and ISP domain address. To good to
be true, isn't it. Incidentally, PPP-Connect supports ISDN
connections, too.

PPP-Connect is made up of several programs. SOCKETS.PRG, installed in
the AUTO folder, gives kernel functions. ICONF.PRG configures the
internet access settings quickly and easily. ICONNECT.PRG is
responsible for dialling up, connecting and keeps you informed how
long you have been online. The CAB overlay module allows CAB 2.5 to
go online.
```

Last, but not least, it must be said that PPP-Connect is also able to manage different accounts and locations. So, anyone who has several ISP's or uses a laptop, at home, in the office or via a PABX (private telephone exchange), can configure and save several different Setups and select the appropriate one simply by using a Popup menu.

CAB 2.5

Designed to be page reader for HTML documents, CAB 2.5 is the ideal software for surfing the World Wide Web on the Atari. The HTML file format (HTML stands for "HyperText Markup Language") is a platform independent document description language to assemble information into hypertext documents. HTML documents can contain interactive references which are opened with a mouse click. Most internet pages are HTML documents.

CAB 2.5 supports several HTML releases up to version 3.2, including the most important HTML extensions of Netscape Navigator and Microsoft Internet Explorer, plus tables; frames; GIF animations and much more - with a programm size of still only 350 KB!

CAB 2.5 comes with the OLGA object linking system. OLGA allows you to directly link a document to several programs in a multitasking operating system such as MagiC. You can, for example, use CAB to view a HTML page, whilst editing the same page with a text editor (which has OLGA support e.g. QED), getting an instant check on the result without having to save and load manually.

Texel, the latest Atari Spreadsheet program, which also supports OLGA, has been especially adapted for CAB to create HTML tables for HTML documents. Simply setup your speadsheet table, print to HTML and you'll have a neat HTML table.

CAB Plugins

A lot of new, very neat, plugin programs have been included with CAB.

* CABsurf - Allows you to automatically download individual Web pages together with pictures or even complete Web Sites. You can read the downloaded pages later offline by extracting them with the CABcache editor and without clocking up your phonebill.

* CABcache - the cache manager allows convenient access to all files located in CAB Cache. You can now save Web pages in any directory on your hard drive.

* CABalog - the picture cataloguer, searches through directories or whole drives for GIF and JPEG format pictures and generates HTML pages with thumbnail illustrations of the pictures found with references of the location of the pictures

* CABdload - Allows downloading of files whilst you keep on surfing.

* CABcheck - Checks the documents in your hotlist. No longer do you
have to go to all your favourite web pages manually to find what has
changed since the last visit. CAB Check compiles a list of all
updated pages.

* CABstega - Is a Steganography plugin to conceal messages in HTML
documents without any trace.

* CABcom - Is an advertising filter to reject selected ads and
banners etc. (very neat!)

CAB 2.5 - Feature summary
----
* HTML -3.2- compatible WWW Browser.
* tables, frames, GIF animations.
* Supports important Netscape and MS Internet Explorer extensions.
* Supports Plugin software.
* OLGA protocol object linking support.
* Optimised for MagiC.
* Includes TCP/IP stack and PPP & SLIP for all MagiC versions.
* Overlay module for CAB 2.5.
* PPP-Connect supports ISDN.

System requirements
----
* MagiC, MagiC-Mac, MagiC-PC or
TOS with STICK or STING (ShareWare)
(PPP-Connect is for MagiC ONLY!)
* 2 MB of free memory
* hard drive

Pack content and price
----
* 2x 720k or 1x 1.44Mb floppy disk (please specify when ordering!)
* Detailed 52 page English unser manual
* Registration card

CAB 2.5 costs =A329.95 incl. VAT or =A325.49 for export orders =
outside the European Union.

Upgrades from CAB 2 to CAB 2.5
----
* Disk upgrade plus extra disk
* New detailed 52 page English manual

Cost =A315.00 incl. VAT or =A312.77 for export orders outside the
European Union. Unregistered users, please send the old manual and
original disk back to prove that you hold a licence. All upgrade
reqests to Windsor.

Interactive Registered CAB users

Please contact us for "the special deal".

Package and Posting

Please do not forget to allow for packing&posting charges which are
quite expensive to some places. If you live outside the UK it might
be better to get together with a friend or make a club order!

Small package p&p within the UK =A33.95;
EC =A38.00 and rest of world =A310.

For more information about CAB 2.5 contact System Solutions on
0181-693 3355 or email info@system-solutions.co.uk

1069. STinG problems solved

Newsgroup: comp.sys.atari.st
Date: 1997-10-21 00:00:00 UTC
From: perot@suse.modem.stud.uni-hannover.de
Message-ID: <EIEG4G.6I0@suse.modem.stud.uni-hannover.de>
Source record: 115015
Cross-posted to: comp.sys.atari.st,maus.sys.atari.software,maus.sys.atari.internet

Ok guys,

I found another reason why many people will have problems, but it's not STinG's fault, but the one of bloody Windows, or Trumpet Winsock !

Trumpet, which used to be a rather popular Windows TCP/IP stack had the horrible flaw that it would negotiate to NOT use compression, but then use it anyway !! ISPs had to adapt, inventing the workaround of too agreeing to not use compression, but then doing it to make Trumpet work with them. Again, the ones who suffer from this are the people using independent platforms, like Atari.

I definitely know it for MCI who is a large USamerican ISP, that they would use compression even if not negotiated. They offer 'SLIP' from their menu, but due to this, CSLIP must be used for STinG and any other true TCP/IP stack. I presume if the user chooses PPP, again compression must be enabled in STinG (haven't tried the latter).

So if you suffer from the problem that ping won't work on an established PPP connection, but know for sure your ISP gives you full IP access, try to enable Van Jacobson Header Compression. If it works then, be happy, but still tell your ISP to move their ass to switch off that bloody Trumpet Winsock workaround, which nowadays is as obsolete as Trumpet itself.

Guess this will help a fair number of people ...

Cheers Peter

PS.: Thanks to Ronald J. Hall who gave me the opportunity to figure this out.

> 7c].
> LCP -> Link established, starting IPCP.

This bit looks exactly like it should. STinG starts the second phase
of negotiation (IPCP) as the first part seemed to have succeeded.

> IPCP -> Doing Conf.-Request :
> [03 06 00 00 00 00].
> IPCP -> Timeout (Retry)
> IPCP -> Doing Conf.-Request :
> [03 06 00 00 00 00].

The following indicates the ISP hadn't received the last Conf.-Ack.
that STinG has sent.

> LCP -> Peer does Conf.-Request :
> [01 04 05 dc], [02 06 00 00 00 00], [05 06 b4 31 f1
> 7c].
> LCP -> Link is going down.
> LCP -> Doing Conf.-Request :

> 9a].
> LCP -> Doing Conf.-Ack. :
> [01 04 05 dc], [02 06 00 00 00 00], [05 06 b4 31 f1
> 7c].

Up to here it's just a renegotiation, which is not to unusual.
But I have no idea why STinG is

> LCP -> Doing Term.-Request.

The only thing I know is that it's supposed to be some sort of "intelligent"
compression, like DCC and MD. I doubt that Steinberg would give away their
technology, but who knows - since they won't make any more CAF upgrades
(let's hope they'll continue making bugfixes) for our beloved computer,
maybe they would eventually?

> Timeworks, Protext etc...?

At that price, it's probably the BJ-30. If it is, it's the same one that I've been using quite happily (in LQ mode) since February. It works very well with Timeworks (and Timeworks 2) although it's resticted to 180dpi, and Protext (4.37) works well with the LQ2500 driver.

On top of this, the BJ-30 has the option for reducing the output page size to either 2/3 or 1/2 size. This means, under Timeworks, you can print the same page as poster (A4) and leaflet (A5) size, just by a few presses of the front panel buttons.

On top of that, just to give you some more info, it even supplies a list of control codes for both the LQ and BJ print modes.

> Is there anybody where the EZ works without any weird problems?

I use a SyQuest EZ-135 and, usually, don't have problems with it. The only real problem comes when I change cartridges and they've both been partitioned differently. If they've an (almost) identical partition layout, there's no problems after a change. It's only when they're quite different in layout.

I've 6 in total, 5 of which I use fairly often. The first 2 have the following arrangement and are easily interchangable with each other, but not the other 4.

C: 8Mb, D: 16Mb, E: 16Mb, F: 16Mb, G: 16Mb, H: 16Mb, I: 40Mb

A quick ESC at the desktop registers the change without problems.

The second 2 have the following arrangement, and are easily interchangable with each other, but not the other 4.

C: 6Mb, D: 10Mb, E: 63Mb, F: 18Mb, G: 31Mb

As with the first 2, a press of ESC at the desktop registers the change.

The 5th cart, which I use for net work, has the following arrangement.

C: 8Mb, D: 64Mb, E: 30Mb, F:26Mb

This one needs a reset when changing to any other cart.

The 6th cart, which I use for storing *.MSA or *.LZH of master discs, has the following layout:

C: 16Mb, D: 64Mb, E: 48Mb

This one also needs a reset to be used.

All the above have been partitioned with HD Driver v6.0, using the minimum sector sizes (since I can use it with TOS 1.62)

The requirement to have a warm boot between some changes isn't to much of a problem since they're all set for different types of work and need other auto folder programs loading.

Apart from the above, I've had no problems with my EZdrive. Can't say much about the EZ-230 or SyJets though.

> SM124 has recently died and I have an old VGA (15 pin) PC monitor that
> I would like to connect. Is this possible and if so does anyone know
> the pinout to use??

After a lot of digging around in magazine back-issues, I've found the
following that should help.

Here are the connection details for an ST(E) to VGA monitor:

ST to VGA (Colour)

ST pin number VGA pin number

7 (Red) ------------ 1 (Red)

6 (Green) ---------- 2 (Green)

10 (Blue) ----------- 3 (Blue)

9 (H Sync) --------- 13 (H Sync)

12 (V Sync) --------- 14 (V Sync)

13 (GND) ------------ 10 (GND)

The following pins also need connecting together on the VGA connector:

4 (Monitor ID Bit 2 ?)
6 (Red GND)
7 (Green GND)
8 (Blue GND)
10 (GND)
11 (GND)

Note. To work in this mode, the monitor must be able to operate at a line
frequency of 15.5 KHz.

ST to VGA (ST High)

ST pin number VGA pin number

9 (H Sync) --------- 13 (H Sync)

12 (V Sync) --------- 14 (V Sync)

13 (GND) ------------ 10 (GND)

10 (Mono Out) needs connecting to 4K7 resistor, and then to VGA
pins 1, 2 and 3.

The following pins also need connecting together on the VGA connector:

4 (Monitor ID Bit 2 ?)
6 (Red GND)
7 (Green GND)
8 (Blue GND)
10 (GND)
11 (GND)

The following pins also need connecting together on the ST connector:

4 (Mono Detect)
13 (GND)

STTOOLS works great at undeleting files, except where they've been
fragmented.

If the partitions on the megafile are less than 16Mb, try DLII. It's able to
handle that quite easily, and the REORG program can do a good job at
defragmenting files. The only thing to watch for are physical faults on the
HD. If it tries to write to a sector that's bad, if f*cks the partition.

>Any ideas would be greatly appreciated!

Mark, you may have already tried this, but I've had a very similar
problem with CAF which appears to be down to a corrupted DEF.ALL file.
Running CAF with the DEF.ALL renamed or moved elsewhere will prove
whether or not this is what the fault is. All you then need to do is
create a new DEF.ALL file with all the correct settings, or use
DEF.BAK as long as you have one which isn't also corrupted.

Just to be on the safe side I keep a working DEF.ALL on a floppy -
this always seems to happen after I've been doing disk maintenance or
archiving files.

This indicates that you didn't enter the correct maximum sector size in
the settings for removable media using HDDRUTIL. Partitions with 64
MByte capacity have larger sectors than with 63 MByte capacity.
This is explained in the HDDRIVER manual, of course.

I can't say that's been the case for me. As a new purchaser of CAB v2.5d I
only had to pay £27.50, and I know that my show price of Texel was way less
than the cover price after I ordered it in October 1996!

g> In SS's defence, AFAIK they only got CAB2.5 in within the last day or
g> two, so it's obvious that if you did make it to the show you're bound
g> to get it before any mail order. They did explain this to me on the

Yes, it just made it. ut I'm surprised you haven'tmentioned another program
that only made it to the supplierthe day before the show -Interface 2 in
English with a 142-page printed English manual translated by Peter West and
Tom Thomason - excellent! I think Steve Delaney had nearly sold out at the
Birmingham show, so I don't know if there were any left in London when you
were there.

>>experienced any problems yet.
> Let see if I can explain what is happening:
> [...]
I know the technical details of VFAT, and that's why I say there isn't
really a problem with using this disks on the ST. OK, depending on the
software you use to display the disk's directories, you'll see the
entries for the long filenames as if they were files of their own, with
weird names and attributes. But in no way the disks are trashed. No data is
lost if you use them on the ST, you only lose the long filename if you
rename a file with a long name on the ST and waste directory entries if
you delete such a file on the ST.

Btw, Thing 1.09 automagically filters these additional entries, so you
won't see them in the directories display by Thing.

Ciao

Thomas

1089. Re: Audio Hard Drives ?

Newsgroup: comp.sys.atari.st
Date: 1997-10-21 00:00:00 UTC
From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <344CE2B4.2A63282A@intuit.com>
Source record: 115035

I have three drives on my CAF setup, a Toshiba 1 gig, Seagate 2.1 gig, and jaz drive. All three work fine for audio on my setup (although I confess to only using the jaz for backup/transfer, not for audio). I successfully play 8 tracks simultaneously using either drive.

In my opinion, the only thing you need to do now is look for a drive with embedded servo (most modern SCSI II drives feature this). It eliminates thermal recalibration which can interrupt the SCSI bus. It seems that most drives that you see have fast enough seek and access times for audio now.

The only exception is if you want to RECORD 8 tracks simultaneously through the ADAT interface or JAM-8 IN. In that case, you should look for a faster drive with a spindle RPM of at least 7200 (my drives are 5400, and I don't always have good luck recording eight tracks simultaneously).

As for the noise factor, I have all my drives on the other side of a partition. They all make noise, some more then others, but it's a good idea to move them to another room or build a well-ventilated box for them.

-Mark

Thank you for responding to my problem as posted in comp.sys.atari
My provider doesn't use PAP_ID & PAP_PASSWORD ---could that be the
problem.I have attached a DEBUG.LOG,with MTU set at 1500 according
to my provider.PAP* left blank.
I have tried e-mailing my DEBUG.LOG to Peter and it keeps getting
returned so I'll place here hoping that he will see it and be able
to help.

Hmm, something's wrong with your resolver setup. Maybe reinstall the resolver ?
Extract RESOLVE.STX and CACHE.DNS from the package, and put them where the
other STinG modules are.

Observe the bootup message. It displays the name of every loaded module. RESOLVE
must be amongst those.

Have you added name server entries ?

Cheers Peter

Oops, you should carefully watch out that the modem does not start turning
somersaults for being so bored with the connection.

> Peter, I think the DIAL.SCR you sent me is working, but I do have a couple
> of questions. So I'm better off not using PPP (because of the Trumpet Winsock
> thing?) with my ISP?

I'm not precisely sure. Definitely the Trumpet thing affects PPP too, but with
that PPP connection to MCI I saw no ping echo packets returned, which cannot
be explained by VJHC confusion (maybe though if the Trumpet flaw is even worse
than I thought in that is also confuses other PPP compression mechanisms, in that
case even Ping were affected). As for SLIP, I'm 99.9% sure the Trumpet flaw is the
original reason.

> I had tried SLIP with STIK before, only to have my ISP
> tell me it couldn't be done because while SLIP is on their menu, it wasn't
> actually a supported option! (actually using C-SLIP, right?)

Precisely, due to that workaround for the Trumpet bug.

> Now, let me say I haven't RTFM on these programs, I just tried to use them
> for a short while today...(Darn it, I was so excited after seeing it logon

Note first this is not the matter of the TCP/IP stack anymore. I suspect it's
the news server and the POP server asking for a password here, and Newsie and
POPwatch only passing the request to you. I can only speculate that your inter-
net account at MCI does not automatically include news access and a mail account,
although this is a little unusual. Talk to MCI to clarify this.

> this something I have to edit with those STIK options at the end of STings
> DEFAULT.CFT file? Thanks in advance to everyone, especially Peter! :)

Rather unlikely.

Hi Roy,

No, it is not possible if it is a stock machine. If you have an upgraded STe with a 68020 or greater (a CPU with MMU), then it is possible. Also, it is best to have an FPU as well.

I've installed Linux/68k on my Falcon with no problem.

1095. CAB - multiple loads?

Newsgroup: comp.sys.atari.st
Date: 1997-10-22 00:00:00 UTC
From: schrist@interlog.com
Message-ID: <62m9ut$rt8@shell1.interlog.com>
Source record: 114841

Can someone explain something to me about CAB (1.50)?

When I load a page like my home page (http://www.interlog.com/~schrist/)
it seems to load 4 times before it finally displays!

As it loads I can see the same img files load in, again and again.

When I check log on my page it show it loaded it four times. I don't seem
to have this problem if I turn the graphics off. Also I never noticed it
when I ran in monocrome (on my TT's TTM195). However the last few days I
have been running at TT Medium on a VGA monitor and noticed the poor
performance.

Anyone got any ideas?

Actually, I have another question. Is anyone actuall using CAB other than
me. I've been keeping a log of what type of browsers have hit the TAF web
page. Other than myself I've had one other CAB (2.01) hit over the last
month. This is very sad!

BTW the TAF page is: http://www.interlog.com/~schrist/taf/
(TAF = Toronto Atari Federation)

Canada's Fan S/F Convention http://www.interlog.com/~kcozens/ttrek/

Thanks for the reply! I'm just wondering-does Newsie ask you for a Password right after you choose the option "connect to host"...? If so, what are you using for your password? Note I'm not asking for your password here, just if you are using the same password that you logon to your account with. If not where did you get your password from? Thanks in advance! :)

Hi ,

Does anybody know if and where and how to configure gnu binutils (as/ld)
for an atari st binary format or other relocatable output format ?
If there are allready other bin. formats included in the binu, please
let me know which do what I need.

I currently working on a mutlitasking os without a mmu, when ever I like
to load a new/other program, it have to be relocated to assigned
address.

regards roman

b> The supposedly latest version released as PD by C.Edwards is dated
b> 30.4.96. of size 516374, and is the one I have released to funet, ibp
b> and umich as rftrd2qn. I have a version that was prepared specially
b> for me to translate TeX files and is dated 17.6.96 with a size of
b> 521828. Yours does seem even later!!!

I didn't realise before that the file name might be relevant. The full
details of mine are:

rftrd2ql.prg 521,778 bytes 14/03/97

i would've guessed that your *qn version was later than my *ql version, but
the date does seem to be decisive - there isn't a lot in it, based on the
file size, whichever is the more recent.

I found Photoline to be quite resopnsive and easy to use. It does lack
some of the filters that Photoshop offers, but far exceeds the
performance of Photoshop, especially considering the platform you want
to use (ahem, pun intended:).
GTLook II from DAs works very well with my Epson scanner, and there is
no limit to the file size being scanned (well, how much can your hard
disk hold?).
Rainbow Multimedia II offers high performance and creative freedom for
photo type image retouch work. Nice filter effects too. Falcon only.

A demo of Apex Alpha was shown at the recent German Atari show. This
will be another milestone when released to add to the above

applications.

Unless your a professional, there is plenty offered in the TOS market to compete with the "other brands", and definetly nothing to feel second class about:).

> and I don't always have good luck recording eight tracks simultaneously).

Even with 5400 RPM modern drives are much faster than the Falcon's SCSI
bus supports. 7200 RPM won't help because it's not the drive that limits
the transfer rate but the Falcon's DMA hardware. One thing you should
not do if you want a high transfer rate: Don't use AHDI, it's quite
slow with Falcon SCSI. (And doesn't support SCSI drives > 1 GByte.)

No, you're wrong. Formatting has nothing at all to do with compatibility in respect to a particular platform. Partitioning is THE ONLY thing that counts. (Note that we are not talking about these weird terms "high level formatting" and "low level formatting" like they are used in the DOS world. What formatting really means is an operation the drive does completely on its own without operating system intervention, namely clearing and checking all sectors and replacing bad sectors be spare sectors reserved for this purpose.
It's partitioning on the Atari or the combination of fdisk/format (DOS) that finally creates the file systems the operating systems depends on. So it's perfectly fine if you format your cartridge on the Atari (or don't format it at all because it's preformatted) and then create a FAT filesystem on it either with the Atari or with the PC.
If you want your cartridge to be compatible with both platforms you have to create a DOS compatible file system. You can either do this with fdisk/format or with programs like HDDRUTIL (->HDDRIVER) that support creating of DOS compatible partitions on the Atari. Drivers like HDDRIVER recognize DOS partitions as well as TOS partitions. Note, however, that currently either Big-DOS or MagiC are required in order to use DOS compatible partitions > 32 MByte with the Atari.

I am using the new STiNG with Newsie 0.8 and CAB 2.0 at a DTE of 115k,
Regis. No probs ..... :-)

I have a 28k8 modem and am getting reported transfer rates (by Newsie)
of 1600-2500 cps on short mails. I guess rates for larger items will
be better.

It's a shame we don't have better "metering" on this internet
software. I know the whole issue is clouded by packet switching but
most of us are still judging transfer performance by "feel" raher than
"fact".

In article <877371582_OASIS_@zetnet.co.uk> arthurm@zetnet.co.uk (Arthur Marshall) writes:

I've just been playing with Adobe something or other on a friend's PC, with a colour scanner, to scan in and retouch colour photos for DTP work.

What I want to know is what do I need to do (and pay) to upgrade my gear to be able to do the same kind of work on my Atari? I currently have a 4 meg Atari STFM, hard drive, HD floppy and work purely in Hi Res.

Can I possibly work in HI Res in Colour and is it cost effective to upgrade that far,

I hesitate to say "impossible", but upgrading an STFM to high resolution and colour depth is going to be difficult and expensive.

or should I buy the dreaded PC (mouth washed out with soap).

Nah. Scan this newsgroup for a used Falcon (which will run much of your current software), or get a real graphical workstation from SGI.

IIRC a previous statement from ASH said that a preemptive OS was needed,
so MagiC and MiNT/N.AES/MultiTOS would work but not Geneva. If you run
Geneva under MiNT it should work though. Have anybody tested this yet?

Hi all,

I'm searching for the named program from Softarts (Berlin).
The firm has stopped the business with software.

So what I need is a dealer adress, or so who can sell me his pgr.

The program is good for live performances.

Thanks

Charel

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

CS TeX works fine under Magic on my Falcon, but when I actually
compile my documents TEX.TTP runs full-screehn, not in one of Magics VT52
type windows. In other words, I can't access other porograms through GEM.
Is there a way round this ?Is CS Multi-Tex still available ? What about
Lindner TeX, the archive at FTP.TEX.AC.UK is corrupted.

Curious,
"Augeas"

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) £3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) £4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) £5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) £5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) £5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) £5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 3
Superleague Soccer (1d,ss) 3
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 4
Graham Gooch's World Class Cricket (1d,ss,meg) 5

SIMULATIONS

ATFII (Atdvanced Tactical Fighter II) (1d,ss) 2
Lombard RAC Rally (2d,ss,nb) 2
Their Finest Hour -The Battle of Britian (2d,ds) 5
Carrier Command (1d,ds) 5
Railroad Tycoon (2d,ds,meg) 15

STRATEGY, MIND AND ADVENTURE

Alpha Waves (1d,ss) 2
Go-Moku/Renju (1d,ss) 2
Federation of Free Traders [F.O.F.T] (2d,ss,nb) 2
De Ja Vu (2d,ss,nb,ni don't have them) 2
Conflict Europe (1d,ss,nb) 2
Lords of Chaos (1d,ds) 3
Crash Garrett (2d,ss) 3
The Quest for the Time-Bird (3d,ds) 3
Tower of Babel (1d,ss) 3
Driller (1d,ss) 3
Populous (1d,ss) 3
Archipelagos (1d,ss) 3
Borodino (2d,ss) 3
Star Trek 'The Rebel Universe' (1d,ss) 3
Advanced Dungoens & Dragons
Heroes of the Lance (3d,ss,nb) 3
'Nam 1965-1975 (1d,ds,nb) 3
Pirates (2d,ss,nb) 3
The Kristal (2d,ss,nb) 3
First Contact (2d,ds,nb) 3
Airborne Ranger (2d,ss,nb) 3
Defender of the Crown (2d,ss) 4
Knightmare (2d,ds) 4
Elite (1d,ss) 5
Shadowgate (2d,ss) + Myth (1d,ss) 5
Terrorpods (2d,ss) 5
Leather goddess of Phobos (1d,ss) 5
Amberstar (3d,ds,meg) 5
Populous II (1d,ds, meg & 512k versions) 10
Lemmings 2 - The Tribes (1d,ds,meg) 10
Elite 2 - Frontier (2d,ds,meg) 10

ARCADE

Defenders of the Earth (2d,ss) 2
Eliminator (1d,ss) 2
Wrangler (1d,ss) 2
Hard Drivin' (1d,ss) 2
Yogi Bear & Friends In the Greed Monster (1d,ss) 2
Spellbound Dizzy (1d,ds) 2
Blazing Thunder (1d,ss) 2
Mig 29 Soviet Fighter (1d,ss) 2
Fast Food (featuring Dizzy) (1d,ss) 2

Whirligig (1d,ss) 2
Pheonix (1d,ss) 2
Hellraider (1d,ds) 2
Outrun (1d,ss,ni) 2
Bad Company (1d,ds) 2
Rambo III (1d,ss) 2
Mean Machine (1d,ds) 2
The Light Corridor (1d,ss) 2
Last Ninja 2 (1d,ss,nb) 2
Voyager (1d,ss,nb,NSTE) 2
Hong Kong Phooey (1d,ss) 3
Viz (Adults Only) (2d,ss) 3
The New Zealand Story (1d,ds) 3
Midnight Resistance (1d,ss) 3
Prince of Persia (1d,ds) 3
Hudson Hawk (1d,ds) 3
Panza Kick Boxing (2d,ds) 3
Golden Axe (2d,ds) 3
Cloud Kingdoms (1d,ss) 3
Cap'n Carnage (1d,ss) 3
Cabal (1d,ss) 3
Impossamole (1d,ds) 3
Risky Woods (1d,ds) 3
ST Star Raiders (1d,ss) 3
Oxxonian (3d,ss) 3

Jason,

I had the same problem with MagiC 4. It was fixable by editing the Magicram file to change one value at a particular address. I got the information from Keith Gerdes. I wouldn't know if it would still be the same for MagiC 5+ though. I'll try to see if still have the message that allowed me to fix that problem.

Hi all,
If there is any one out there who is looking to upgrade to a
Atari Falcon then here is the perfect opportunity to do so.
The following is going for ?400 ono.

```
======= The spec ========

Atari Falcon 030
Nemesis
16Mb Ram
127mb HD
Desktopper (Tower style casing & keyboard)
Magic v4 and Multitos
Ease v4
Nvdi v2.5
Blowup Software
2 Atari Jaguar joypads
Wizard Electronics Mouse
Tabby - (Graphics tablet)

======= Extra Software ========

Falcon Specific games all originals

LLamazap
AAzohm Krypt
Ishar Trilogy
Road Riot 4WD

** Other original games that work ***

Sensible soca
Lemings

**** Other software ****

Calligrapher Junior - Word Processor
Super Base - database

In addition to what is listed above I have a number of Shareware titles too ma
y to
list.

**************************************************
EXTRA SOFTWARE
==============
```

I have some serious graphics/DTP software also on offer. All titles are origi
als
and will include manuals, master disks and packaging where applicable.

Calamus SL £70 - 1994 version (DTP)
Da's Layout TC V5 £100 - Vector DTP program
Da's Picture £50 - Image editing software (latest UK version)
Image Copy v4 £10 - Printing/bitmap coversion utility (latest version)

****
EXTRA HARDWARE
==========

Expose Digitizer £150 - Falcon specific digitizer
Tripod/ Falcam / Falcube Software included

MicroVitec MultiSync Monitor - RGB and VGA screen resolutions, perfect for Fal
on.
(offers please)

After Burner 040RC £150 - 040 processor upgrade makes sytem run at upto 80Mhz
when used in conjunction with nemesis.

****

A special price can be arranged if you require everything above. send replies
to

*** Renaud@Zetnet.CO.UK ***
I can also be contacted on Tel 0181 694 2242 Ask for Richard.

<<FALCON 030 127HD 14MB NEMESIS 14in Multisync Magic v4 Ease v4 33600bps>>
At last have received info on Cent Turbo II Just need availability

g> use many of its features. My advice is to stear clear of Photoline.
g> In short, there is no software that can match or even come near
g> Photoshop on the PCs.

There may be another alternative if you try some of the DAs range of
software. Demos do exist:

dapidemo.tos 714818 DA's Picture 1.1 demo
daltcdem.tos 727056 DA's Layout TC v5.3 demo
dal_demo.zip 1065722 DA's Layout 5.6 demo
rpcddemo.tos 410758 DA's Repro v1.4 demo
davktdem.zip 262648 DA's Vektor 1.1 demo

System Solutions are the distributors (also of Photoline btw).

1122. Need some help with a kobold job

Newsgroup: comp.sys.atari.st
Date: 1997-10-22 00:00:00 UTC
From: dbolt@my-ste.demon.co.uk
Message-ID: <877497525.21315.0.nnrp-05.9e98f145@news.demon.co.uk>
Source record: 114952

A few days (weeks) ago, Hallvard asked for some help with a kobold job to do a back-up from one hard drive to another. After some thinking, the following was result. While this does the job, it does need to do two types of back-up, incremental and full, because kobold doesn't seem to be able to select empty folders.

Originally I had the job select, along with the path, any files that didn't exist on the source drive. This worked when there were files still in the destination that didn't need to be removed but, when the folder had no other files in it, it was deleted as well. While this is okay if the folder doesn't exist on the source, if it does, and it's empty, it isn't copied to the destination.

An example is C:\CLIPBRD. If this has some scrap files in it on the source, it stays, but if not, and there are some in the destination copy, bye-bye clipboard. This causes a problem in that the origonal idea for the job was to make the two drives identical in file/folder structure. ATM, I've used a workaround in that folders aren't deleted on the destination unless a full back-up is requested.

Now, what I want to know is:

Has someone been able to make kobold select empty folders and copy them?
Have you done it so there's no user interaction?
How have you managed to do it?

And, totally unrelated, can anyone see where it can be optimised any more than it has been?

Any help on this would be most welcome. I want to make it the best back-up job that I can, and this is the final (hopefully) stumbling block.

The full job is listed below and I even tried to put some useful comments in it as a helper.

```
-------------------------------- CUT HERE --------------------------------
* Incremental/full backup (v 2.1)
| ------------------------------------------------------------------------
| backs up partitions C-G (drive 1) to partitions H-L (drive 2)
| "Incremental backup": backs up only new/changed files
| "full backup": backs up complete partitions
| recommended: do "incremental" backup once a week and "full" once
| a month etc. to insure an identical backup copy (deletes old files etc.)
| ------------------------------------------------------------------------
| In this version all the copying code has been optimized a bit and the
| copy commands for the full and incremental have been merged.
| ------------------------------------------------------------------------
```

```
| Variable usage:
| %0........This contains the drive 1 partitions
| %1........This contains the drive 2 partitions
| %9........This contains A: for incremental and F: for full back-ups
| ----------------------------------------------------------------------

DIALOG_LEVEL = 2
| All dialogs displayed.
| Change to 0 when satisfied so only errors are reported.

GEMDOS_MODE = (U)
| set U: as a Gemdos drive

VERIFY = ON
DATE = KEEP
ARCHIVE_TREATMENT = CLEAR
SOURCE_TREATMENT = 0
BUFFER = 50
| use half available memory (for Magic)

SET_DRIVE 0=C:
| set start source drive as C:

SET_DRIVE 1=H:
| set start destination drive as H:

ALERT "*Incremental or full backup?@(defaults to incr. in 30
seconds)|!~Incr.|~Complete|~Exit",10,20,130
| choose between incremental or full backup
| defaults to "incremental" if nothing is selected after 30 seconds

10:
SET_DRIVE 9=A:
| Use variable 9 as a flag for type of backup
| A: is incremental, ie. uses the Archive bit.
GOTO 30

20:
SET_DRIVE 9=F:
| Use variable 9 as a flag for type of backup
| F: is Full

30:
ALERT "*Backup partition %0: to %1: ?|!~Yes|~No|~Exit",50,100,130
| Timed request whether to backup source to drive.
| Defaults to yes if nothing selected after 30 seconds

50:
SRC_SELECT %1:
DST_SELECT %0:
BRANCH_ON_DRIVE 9 (A:51,F:52)

51:
CHOOSE SE DATE_DIFFERENT
```

```
| select only the files that have a different date (or don't exist!)
| on the destination (the real source) partition
CHOOSE SI ARCHIVE=SET
| select the files with the archive bit set as well as those that
| are already selected.
GOTO 53

52:
CHOOSE *+
| choose all files on the source (the real destination) partition

53:
DELETE ignore_wp
| delete the selected files.

60:
SWAP
| swap source and destination drives. Quicker than selecting
| the source and destination individually.

BRANCH_ON_DRIVE 9 (A:70,F:80)
| When variable 9 is A: (when picking

70:
CHOOSE SE CONSIDER_PATHS DATE_DIFFERENT
| select files where the date is different to that of the same name
| files on the destination. Also works when the file doesn't exist
| on the destination.

GOTO 90

80:
CHOOSE *+
| select full path of ALL files

90:
COPY keep_flags open_folders ignore_wp reset_archives
| ^^^^^^^^^^^^^^ this will clear the
| archive bits.
| copy files retaining the date and file attributes.

100:
NEXT_DRIVE 0,110
| set source drive to next one available

110:
BRANCH_ON_DRIVE 0 (H:120)
| exit the job when the source would become H:
NEXT_DRIVE 1,30
| set destination drive to next available and start loop again
| falls through if no more drive available

120:
BING
```

```
ALERT "*Backup complete!|!~OK",130
| There, all done. Added since you wanted to know.
| Made the button the default, so you can just press return to exit.

130:
QUIT
| exit job

-------------------------------- CUT HERE --------------------------------

About ATY computer I don't know. I recommend asking System Solutions for
an update. They are a very reliable partner.

Hello.

Last week I checked my old software collection.

Unfortunately I discovered 2 Problems:

. Ultima 5 : I just didn't find disk1. Does someone of you have Disk 1?
Eventually I will buy a new copy (disk only).

. UMS2: The File UMS1040ST.PRG got corrupted. I have the German Version
of this game and I don't know if there are any differences w. other Versions.
It would be very nice if someone could send me this file.

Thanks for your Help

Sacha.

>speed is only limited by the modem and the phone line, not the computer.
>You can use a 56400 bps modem with your ST, however you waste a lot of the
>speed.

I'm not confusing anything. Someone seemed to claim that the limit is
14400. I pointed out that it's 19200. It is, isn't it?

I'm fully aware that my K56 flex modem can't run at it's wonderful max
speed with my Atari. But at least I have gone from 14400 to 19200 (and I
got it cheap). Now perhaps I can start thinking about that hardware
modification...

I see now -- you don't have the specs for your multi-frequency monitor. Yes, I'd say those numbers are the frequency ranges (30-55 KHz horizontally and 45-90 Hz vertically). Enter those maximums in the VMG. The other maximum you'll need to set is -- as the VMG calls it -- 'pixel frequency' (my NEC manual calls the same thing 'maximum video bandwith', measured in MHz -- a.k.a. refresh rate). You want to set this parameter before experimenting with different resolutions! Perhaps Acer can give you the maximum rating (maybe it's already set correctly). Be careful... if set beyond its maximum, the monitor could be permanently damaged. Setting the monitor to its maximum or just under (for safety's sake) will get you the best possible display, though.

Like mentioned earlier, I spent a great deal of time tweaking my resolution library. A lot of the VMG is still mysterious to me. Input those maximums and then try creating two 800x600 resolutions: one with 8-bit color and the other with 15- or 16-bit color. Mess around until the grid turns blue, working up to the highest refresh rate you can muster (let your eyes be the judge). Don't worry if you can't get a blue grid, though -- some of mine are yellow and the display is very clear. Don't be alarmed if your display looks strange while experimenting. Just quit and relaunch the VMG (or do a cold boot). So long as your monitor doesn't make strange noises (like a hissing sound) it'll be OK, because the maximum settings will prevent the monitor from being driven too hard.

I'll cover my butt here and say do this all at your own risk.

Look for the word processor Marcel (mrcel234.zip). It loads 1st Word documents and can save in RTF, which can then be read on the PC and converted to MS Word. Go to the Atari section on www.filez.com or www.shareware.com (I forget which one) and do a search.

I thought it odd too, but thats what my ISP told me to do-they claimed that
otherwise I'd be kicked offline fairly often... Go figure. :(

> It's used by Xbios as starting in 1968, in binary mode, giving a max
> year of 2223, limited by Xbios (and Gemdos as well) to 2107.

This is wrong, the limit is 99 EVEN in binary mode ....
I just looked to Motorola and also Benchmarq documents
in fact you can put any value in , but it just WON'T get
updated properly when it should ... in the specs the
limit in binary mode is given by motorola to be 0x63
(99) because the chip is intended to be a '100 year calendar'
as they say ....
In other words you can put in 2053 for example but when
it should become 2054 it will loop back to 1968 again :-(
I wonder why they kept this limit ?
So the limit we were searching for is 1968+99 which
is 2067 which seems to be the real atari limit ,
according to Motorola ....

By the way , you were right , day 1 is sunday !

so long,
DAVID GODEC

Thanks for the clarification. My response was coming from my background with Pro Tools and other non Falcon HD recording systems. It's good to know my hard drives are not the bottleneck with the Falcon!

BTW, are there other tricks to getting ADATREC.prg (Steinberg's 8 track transfer program) to work more effectively? Larger partitions? Smaller partitions? Empty partitions?

-Thanks

After buying quite a few computers i've accumulated duplicates of

these items so their up for sale. I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Golden Image Hand Scanner & Touch Up Software ..... $ 50
* Spectre 128 Mac Emulator ..... $ 25
* Spectre GCR Mac Emulator ..... $ 35
* Atari 1040/working but a few keys needs to be replaced . $ 15
* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* Monitor Switch Box ..... $ 5
* External Disk Drive ..... $ 25
* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10

Software: All With Manuals

* PC Ditto ..... $ 10
* Phasar Professional Home Accounting System ..... $ 10
* Silicon Chip STAccounts Accounting Program ..... $ 5
* Dr T Midi Sequencing Software ..... $ 5
* Dr T Copyist Music Scoring Program ..... $ 5
* Hybrid Arts DX-Android (DX7 Editor) ..... $ 5
* Hybrid Arts EZ Score Plus ..... $ 5
* Edit Plus Professional Editing Tool ..... $ 10
* Typesetter St ..... $ 10
* Stalker/Telecommunication Software ..... $ 20
* Steno/Text Editor ..... $ 10
* Straight Fax 2/Faxing Software ..... $ 30
* G+Plus ..... $ 10
* Migraph OCR/Optical Character Recognition Software ..... $ 10
* Mr Boston Official Bartender's Guide ..... $ 2
* Black & White Monitor ..... $ 35
* The Juggler ..... $ 5

Software/No Manuals:

* Hybrid Arts Ludwig Music software ..... $ 3

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10
* Elite/A Fantastic Voyage ..... $ 10

* Carrier Command/ Tactical Warfare ..... $ 10
* Defender Of The Crown/Knight Fight ..... $ 10
* Knightmare/Knight Fight ..... $ 10
* ShadowLands/Barbarian Fighting ..... $ 10
* Barbarian/Fighting ..... $ 10
* Lemmings/Maze and Building ..... $ 10
* Ultra V Warrior of Destiny/Knights ..... $ 10
* Baby Jo/Baby Super Hero ..... $ 10
* Drakkhen/Dragons ..... $ 10
* Gun Ship/Helicopter Fighter ..... $ 10
* The Pawn/Good and Evil Fight ..... $ 10
* Dragon Of Flame ..... $ 10
* Curse Of The Azure Bonds ..... $ 10
* Breach ..... $ 10
* Inside Brataccas ..... $ 10
* Star Fleet ..... $ 10
* Time Bandit ..... $ 10
* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5
* Rambo 3 ..... $ 5
* Lure Of The Temptess ..... $ 5
* Civilization/ 4 Disk ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25
* Atari ST Internals/The Authoritative Insider guide ..... $ 10
* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10
* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10
* Atari ST Application Programming ..... $ 10
* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3
* Easy Draw ..... $ 3

If there's something you're looking for and it's not on the list let me know... I have 2 closets I haven't gotten to yet plus over my mother's house I have stuff. Willing to work on package prices. Buyer(s) pays postage!! All reasonable offers will be considered!!!

>Geneva under MiNT it should work though. Have anybody tested this yet?

Yep, I did but I never managed to get ppp-connect working.
I could make a connection and I could log in but soon afterwards my system hanged.
BTW: This happened also with MiNT/N.AES so it can be I've make a fault somewhere
but as I've a good working MiNT/MiNTnetsetup I didn't break my head on this problem.

With Gluestik and a MiNT/MiNTnet setup one can use however CAB 2.5 (and a lot of
other Net-prog's) without any problem even with Geneva/MiNT. Geneva however seems
not quite happy with MiNT.

Can someone help this person who is a FALCON owner, he wrote to me after getting HERO2 for the Falc, he says he only has access to ftp and email, NO NEWSGROUPS

He wants to know of ANY email lists he can join for information of any sort?
Please send him any info, NOT to me.. but to his email, any mailing lists or clubs or whatever you Falcon owners get up to :) he has nothing and I assured him someone would respond from here..ta:)

Here is a portion of his email..

From: Enrique Marrodz <enrique@luda.uam.mx>

About the info, I'm interested in knowing about everything my computer can do! Graphics (specially fractals), games (I love RPG), engineering (pardon my english), and my biggest dream: to program, mainly games. Altough I'm not too bad as programmer, I have not yet the tools for doing so in my plattform, maybe later.

So, please, if you can get my case to the community, do it!

Enrique Marrodz, loyal atarian.

On 22 Oct 1997 07:32:28, Mike Grove wrote:

>I found Photoline to be quite resopnsive and easy to use. It does lack

Responsiveness and ease of use are subjective, but--

-Photoline is incompletely translated into English. About a dozen
German words are in the menus
-Maybe I'm just dense, but I never could figure out how to use several
"features" which were not discussed in the manual. How do you use
the "densitometer"? What should happen when you adjust the item
called "--kB GDPS-Mem"? What is the effect of, and the proper use of,
the "mixture in percent" in the histogram menu?

My favorite feature is found on p. 25 of the manual: "If there is a
help system..."! "IF"!! The person who wrote the manual does not
know if there is a help system! (There isn't.)

John

CAB 2.5 has been released!!!

We have been notified by Systems Solutions that CAB 2.5 has been released.
Our first shipment is expected in next week, and we are taking orders now!

CAB 2.5 costs $49.99 and includes the PPP connection for MagiC, it may also
still be used with Stick or Sting. If you would like the full CAB 2.5 press
release please e-Mail us with "CAB PR Request" as the subject.

Owners of CAB 2.0 can upgrade to 2.5 for $25 (receive a $5 discount if your
CAB 2.0 was purchased from us) by sending their manual and origional disk
to: Systems For Tomorrow - PO Box 3034 - Independence MO 64055.

Please add $3 shipping to US CAB 2.5 orders and upgrades, $6 for Canadian
orders.

Thanks,
Kent @ SFT

Source record: 114979

Okay, as far as I can tell, with Peter's help, I now have STing working via (apparently) a CSLIP connection with my ISP. Now my question is, what STik clients will or will not work with CSLIP? I've been trying the following with these results:

AtarIRC: DNS Error; unable to resolve hostname
Finger: Error:
Forecast: No Error (but nothing happens)
Newsie80: Asks for a password, then when I enter mine, it says that my host rejects it. (eof)
POPWatch: Same thing as Newsie. I tried my password, no password, nothing worked...

In each programs case, I tried 204.71.75.133 and pcc-uky.campus.mci.net and it made no difference. (for a DNS entry)

Well, if anybody can shed any light on this, I sure would be grateful.

Thanks in advance! :)

I need to make a screen snapshot of my Falcon desktop to send to a friend with a PC. Is there anything that snaps the whole screen in a nornal format that can be viewed on a PC? If not then what is the easiest way to convert a weird .IMG file into something normal so it can be viewed on a PC easily? Plus can I take a shot of a game that fills up the whole screen, not in a window? I would prefer something I don't have to spend money on, but if I must then just tell me whateva'. Later homes. -Satcom2

Hello!.

I had the same problems on my Falcon until a kind soul told me
that only the last version of ExtenDOS works with MagiC 5... you can
download the right patches (up to v2.3b)on the Anodyne Software's Home
Page:

URL: http://www.cyberus.ca/~anodyne/

Regards.

Daniel.

Message-ID: <877551478_OASIS_@pcc-uky.campus.mci.net>
Source record: 114983

Okay, thanks to Peter R., I've apparently got a working CSLIP connetion with my ISP via STing. So what programs will work with CSLIP? I've tried these:

AtarIRC: Gives a DNS error, can't resolve hostname...
Finger: Gives Error:
Forecast: Says "No Error" after I try a local airport, but nothing happens.
Newsie80: Asks for a password, I give mine, says its rejected...
POPWatch: Same thing with the password...

None of them work right. I've read the docs, and I tried my hostname as both 204.71.75.133 and pcc-uky.campus.mci.net. Is there something else with STing that I'm supposed to be setting? Maybe some of those details in the DEFAULT.CFG file? Thanks in advance for any info...! :)

This is good news. For the original poster, if he used V1.2618 already the
only remaining possibility is that some other program interferes with CAB /
CAB.OVL, especially as other network applications work fine (as he reported).
So it's probably worth to boot a 'clean' machine without tools, and try again.

Hi there,
The best program to take snapshots with is Imagecopy. It even manages to
take snaps in Cubase Audio, a program that very often bombs when you have
other programs active...
Imagecopy can convert between various formats too, so transfering to a PC
wouldn't be any problem at all.

Best regards,
Claes

E-mail: Antmail or CAB?

Renald,

You do need a terminal program to use the modem by itself. Antmail and
CAB require the use of STiK or STinG to connect to an ISP. Make sure the
one you use allows the the use of Slip or CSlip connection. PPP
connections with the Atari are not smooth sailing yet :). Additionally
you would do well to get HSModem 7 or FastSerial 0.96 to patch the
somewhat buggy serial routeins in TOS. E-mail me if you have further
questions.

PhotoLine doesn't cost US$200, atleast not in europe. Here it cost
199 DM and not dollars. Not very expensive for such a powerfull program
if you ask me.

1160. OUTSIDE and HDDRIVER from Computer Direct: Distribution stopped

Newsgroup: comp.sys.atari.st
Date: 1997-10-23 00:00:00 UTC
From: Uwe Seimet <us@ooc.de>
Message-ID: <344F01F0.BD8@ooc.de>
Source record: 114790

Hi all!

After serious problems concerning the reliability of Computer Direct I'd like to announce (I don't like it at all but I have to) that with immediate effect Computer Direct have lost the distribution rights for OUTSIDE and HDDRIVER.
Atari users who got these programs from Computer Direct will have to ask System Solutions in England for support, especially for updates. The current version of OUTSIDE is version 3.41. The current version of HDDRIVER is version 7.0.

Best regards, Uwe

This means there is something wrong with either termination or cables.

The serial port routines in the TOS are buggy so WHATEVER other
programs you use you should always install HSMODEM (for instance) as
an AUTO. This corrects problems with the s/w.

If you are making normal (dedicated) BBS connections then the utility (Connect,
Vanterm etc. etc.) will contain the routines to dial and drive the
port.

If you are using packet switched connections to internet you will need STiK or
STiNG to make the connection and service the port

> the "mixture in percent" in the histogram menu?

John, Photoline is very similar to Cranach (which I use). Indeed, having used the Photoline demo, they're almost the same program.

kB GDPS-Mem is used if your scanner software supports GDPS, which is kind of like Twain on the PC -- it hooks external drivers into applications. So, instead of running the scanner software, you can prescan, crop, and scan directly through Photoline's interface. If you have a scanner, and its driver supports GDPS (like Homa's), input the amount of memory you need for such use.

Mixture in percent is difficult to describe: After analyzing a graphic's data, a histogram and its intricate control line are displayed. Changing the percentage will globally _alter_ this custom control line. This way the overall 'tone' of the graphic can be adjusted or corrected. Unlike the control line in the CLUT, the histogram's is special because every pixel has been analyzed. Changing the mixture can bring out good things from otherwise bad scans or source material. What is a good percentage setting on one graphic may not work on another, because each graphic's histogram is analyzed differently. The histogram functions work best on true 24-bit graphics, those with lots of colors, straight from the scanner (no filtering, reduction, or any other processing beforehand).

To understand what a control line does, experiment with a grayscale graphic in the CLUT and adjust it. From left to right, 0 is black and 255 is white (some CLUTs work vice versa, Cranach being min-is-black). Reduce the same graphic down to 16 colors, then run the histogram display to see what colors were dropped (you'll see obvious 'stepping'). A smooth control line from 0-255 means all colors are in use. The window is split two ways, starting from the bottom-left to top-right. A perfectly straight control line from these two points means the colors are exactly the same in the source and destination. Adjusting the line changes the destination graphic -- the one you're working on -- based on the source values.

Don't concern yourself with the densiometer.

I think that you could have said that a couple of weeks ago, if you were using a Falcon, but I've had no problems with PPP. As of STiNG v1.06 I had no problems with PPP and since v1.08 was released, the Falcon SHOULD be able to handle PPP without problems.

Not sure about the 'no bother', it's alright if you don't move the mouse
while sending/receiving. I usually unplug the mouse when I'm doing news or
mail collection, just as a precaution. If I don't, the mouse may start
going for a wander and that mucks up the transfer.

Apart from the mouse problems, 28k8 is usable on an ST.

w>
w> I installed the program successfully, but when I tried to run it, it
w> started driving the screen at 50hz. My SC1224 runs at 60hz. What to
w> do?

Is this something that changed when moving from TOS to Magic, or was it an upgrade from a previous Magic version? I suspect the former...

I hadn't heard of this problem before, but I can imagine how it happened.

Someone will correct me if I'm wrong here, but I thought that the refresh rate was saved in the DESKTOP.INF or NEWDESK.INF file in TOS. It would seem that the default MAGX.INF file is set with a 50Hz refresh rate.

If that's true, disable MAGX.INF by renaming it and reboot with a utility that sets the refresh rate to 60Hz. Save a new MAGX.INF and then edit back in any previous settings (#_ENV lines etc) that you want in your setup.

Obviously, whether this works or not depends on whether I've got the first bit right, but if I have then I think this should work.

Strange that the question's never come up before... to my knowledge anyway...

HTH

Harry Sideras (hsideras@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk) wrote:
d
: Is this something that changed when moving from TOS to Magic, or was it an
: upgrade from a previous Magic version? I suspect the former...

I've never run MagiC before in my life. It was moving from TOS.

: I hadn't heard of this problem before, but I can imagine how it happened.

Hmmmm.

: Someone will correct me if I'm wrong here, but I thought that the refresh
: rate was saved in the DESKTOP.INF or NEWDESK.INF file in TOS. It would seem
: that the default MAGX.INF file is set with a 50Hz refresh rate.

I looked in DESKTOP.INF and couldn't see anything pertaining to Hz in
there. I have never used or seen NEWDESK.INF in my life. That goes with
the Ataris MultiTOS doesn't it? I am moving from single tasking TOS.

: If that's true, disable MAGX.INF by renaming it and reboot with a utility
: that sets the refresh rate to 60Hz. Save a new MAGX.INF and then edit back
: in any previous settings (#_ENV lines etc) that you want in your setup.

I just read the section in the MagiC manual pertaining to the MAGX.INF
file and its parameters. Nope, nothing about screen Hz in that either.

~:'/ I haven't tried to load MagiC just on its internal defaults yet.
But I have a hunch that it would come up in 50Hz anyway. I'm starting to
get the feeling that I received a disk that was not fully tested on a 60Hz
machine. I want to try it and see though. It seems to start rolling before
it reads MAGX.INF.

: Obviously, whether this works or not depends on whether I've got the first
: bit right, but if I have then I think this should work.

: Strange that the question's never come up before... to my knowledge anyway.

What version of MagiC are you guys using over there? What version of MagiC
are most people using in America? Did I get a disk which was not fully
tested on a 60Hz machine? I'm using 5.03 right now.

Regardless, I found my own fix. I'll explain it in another post soon.
First I have to document it.

My first action in MagiC was to backup a disk with 40 files on it.
Disapointed was I when it was soon discovered that disk-swap-mania was the
thing when you only have 1 floppy drive, and don't copy to the harddrive
first. This desktop told me to swap disks atleast once per file, and

sometimes twice, maybe three times per file. It was henious.

OTOH, the compatability and robustness seem very strong. I was able to run Forthmacs with no problems, altho it was quite a bit more pokey running through the window, rather than just from TOS. that was because the VT52 was sucking up alot more bandwidth than TOS for character IO. Well, VT52 has a lot more to do than TOS which explains why. Things such as print characters which can be resized in a jiffy, and output into a moveable window.

So far seems pretty decient.

Hello everyone---I've put together a new page of classic computing links.
I intend this to be an unbiased collection of interesting links for all
"obsolete", unsupported, or otherwise old-but-still-interesting computers.
Let me know what you think! The URL is:

http://www.cs.pdx.edu/~chambera/classic/classic.html

(And yes, it's readable with Lynx--no frames, Java, etc., ad nauseum!)

>>IIRC a previous statement from ASH said that a preemptive OS was needed,
>>so MagiC and MiNT/N.AES/MultiTOS would work but not Geneva. If you run
>>Geneva under MiNT it should work though. Have anybody tested this yet?
>
>Me and a friend have tested this et-up and it don't work at all ....
>no communication between CAB and its ovl :(

I've not tried it with 2.5, but I have gotten it to work quite well with CAB 1.5 and CAB 2 (demo).
I don't recall which OVL I was using, but I do "think" it was the latest one.
I also tested it using GlueStik and the STik OVL, it worked well too.

I've a Falcon 030...stock config with 14meg on SVGA monitor.

HD Driver hard disk drivers...

My minix partition is on an external SCSI drive....

My Mint set up is a straight install from the KGMD release.

I simply set up geneva as a login shell on the console so that logging in as "geneva" boots me into Geneva/NeoDesk4 on the main console as the root user.

Memory protection MUST be off for Geneva will crash (On 020 or better equipped machines).

I did have NOHOG ACC loaded (what does this do anyway?).

This has been a fairly stable set up...but NeoDesk4 in my case is a weak area, as I've not taken the
time to build mint aware setups, and sometimes find myself running things or copying things in way's I'd rather not at this point! The few crashes I've had "seem" to be caused by neodesk...but I'm pretty sure that it could be optomized better for mint.

One thing to note, using Geneva with mint can be a bit tricky, in that Geneva gets confused about where
to look for environment settings. I've found that it helps to make a seperate geneva GEM.CNF file that
uses your minix drive u path names instead of the normal ones and use your favorite boot manager to swap between the configs easily. I don't know why, but in my experiements, this is the only way I could get Geneva to launch and load all the accs and things as usual. Here's a quick example of what I mean...

:path = .,u:/c,etc... (notice I comment this path out as it will replace that of MINT if not)

:If you need paths found here, that aren't already in your MINT.CNF file,
then add them there using
:drive u:/.
accs = u:/c/accs
toswin = u:/c/geneva/gnvatos.prg
etc...etc...etc...

Also, grab a copy of your geneva.cnf and place it in your /usr/root
directory (or any other user directory that you plan to launch from), this
way, in theory, you can have different geneva set-ups for each user on your
system. You might want to build several different geneva.cnf files under
plain tos first...I.E. One for each resolution, and keep them handy for
later experiments. I haven't quite figured this out yet...but it seem like
this is what Geneva is TRYING to do.

I still haven't figured out exactly where Geneva is getting its configs
from, but I have
noticed that it will write one to your user directory when saving under mint
(I.E. usr/root). At this point, I've taken this approach. I set Geneva NOT
to use the newdesk.inf (or desktop.inf) for choosing the resolution. Hence
it will default to what ever your machine boots in. Next I used a NV ram
setter program to set my falcon so it would boot in 256 color 80 column
mode. Finally, I log in as geneva,
and it launches in 256 color 80 column mode, and I can browse away.

Good luck,
Brian

>
```

I don't know what you are exactly referring to as a modem driver. There is already a serial port driver included in TOS, but you can use an improved replacement one available called HSMODEM07. It can be found on most Atari FTP sites.`

If you are talking about a TCP/IP software layer to access the internet (for email or WWW applications), thhere are several available depending on the connection protocole (PPP, SLIP or CSLIP). Therefore you need eiter STinG, STiK (SLIP or CSLIP only), MiNTnet (for use with MiNT) or PPP Connect (included and only compatible with CAB 2.x).

After many months of fiddling and fussing. Messing with Mint net, trying Wensuite, and the earlier versions of StiNG. I final got my Falcon to talk to my ISP. The current version of STiNG is smooth, slick and works like a charm. Hats Off to you Peter R for working so hard to make this happen.

Kudos also go out to the other programmers that have given us CAB, Newsie, ANTmail, and so on. But without a modern PPP connection, the rest of the software was just using up space on my hard drive.

Hoi,

As my provider uses now a INN 1.5.1 newsserver which doesn't support
the NEWNEWS as used by Oasis/NOS I can't used my provider's
newsserver.
Right now I'm using the German public newsserver
news.uni-stuttgart.de.
One problem though it' so sloooow. For instance today it took me about
35 min to retrieve 58 message.
Does anyone know a fast public newsserver which support NEWNEWS and
host c.s.a.st and c.s.a.st.tech.

I know I can use NEWsie but I just love to use Oasis 1.35

> the settings for removable media using HDDRUTIL. Partitions with 64
> MByte capacity have larger sectors than with 63 MByte capacity.
> This is explained in the HDDRIVER manual, of course.

Below is the actual sector count and size for each partition on that cart.
When I posted the origonal sizes, I rounded to the nearest 0.5Mb, so instead
of being 63.9Mb, I posted it as 64.

sectors bps actual capacity
C: 16383 512 7.9995Mb
D: 65433 1024 63.8994Mb
E: 61439 512 29.9995Mb
F: 53451 512 26.0991Mb

HDDRIVER.SYS is set for a 1024 byte maximum sector size and 7 partitions,
as it is on the other 5 carts. However this cart, and the one with 3
partitions have to have a reset before I can access D: or above.

It isn't much of a problem, apart from when I want to go from using the net
to comms, programming or DTP/word-processing. Mind you, serves me right for
not getting a bigger drive.

well as you are doing the exact same thing and porting all the stuff over
what is your point. I may have to use windoze but it doesn't mean I have
to like it.

Kev.

1188. Help me with Sting !

Newsgroup: comp.sys.atari.st
Date: 1997-10-23 00:00:00 UTC
From: rgronoff@imaginet.fr
Message-ID: <62okk6rhq1@belzebul.imaginet.fr>
Source record: 114880

I've been trying to use Sting for one week now, and it used to work,
in PPP, with occasionnal crashes. Now, even when using fresh copies
straight from the archive, I can't run CAB *at all* with Sting.
Both progs (Sting and CAB.OVL) being the latest versions: CAB.OVL
1.268 and Sting 1.12, d'ld this evening !

All I get is a "runtime error 168"
If I don't hang up, then reset the Falcon, I can't load any more
programmes, INCLUDING THE STING DIALER ITSELF without crashing with
the message "TOS error #69".

The worst is that it USED to work ! I HAVE been able to run CAB with
no trouble for some periods. And at this time, I copied all my config
files in a separate folder, to replace them at every new crash.

Doesn't the doc say that when installed for the 1st time,
Sting won't create the DNS cache ?
But now, even with a fresh copy of the whole stuff, when I cold boot,
I get the DNS cache recognized !

I've contacted Peter Rottengater, but for the moment, it didn't
help to improve. I hope he'll soon find the origin of the problem.

I must have re-copied the Sting package about ten times since last
saturday, even on a second SyQuest disk, to be sure.
But even a perfectly new copy on a different cartridge crashes all the
same !

I'm using, for the Internet, the following configuration:
Magic 4, Sting or Stik, CAB 1.5 w/CAB.OVL 1.268, NEWSie 0.82 and
all the most recent versions of AtarIRC, TelNET.

Can anybody who _had_ the same problems help me to solve them ?
Thank you in advance.

(P.S.: Pour les utilisateurs francophones, j'ai poste le meme message
sur fr.comp.sys.atari
Merci de le lire et, peut-etre, d'etre en mesure d'y repondre ?)

From: goodman@matrix.kapatel.gr
Message-ID: <62on8k$cns@lithos.kapatel.gr>
Source record: 114882

Hi everyone,

Sting seems to be a great program. It's easy to set up(at least it was for me). I connect at 31200 with my Falcon 14Mb with PPP. So far so good. The connection works excellent with all the programs (newsie,cab,...). But when I try to connect with Cab2.0 (demo) I have a problem. I get the messages Resolving and connecting followed by a "Software caused connection abort (Error #-315)" message. I don't press the Esc key. I finally see the page on screen.

What have I done wrong?

Thanks,
Pantelis

Satisfied customers are always welcome back & welcome to get their copy of my free Catalogs.

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some thing you've been looking for, Something you might want & something New to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml. And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can't attach files to your E-Mail. I will get back to you after the weekend. Please Direct all Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien vs Predator and even complete Jaguar Systems. If you have what I'm looking for, check my Atari Catalogs for stuff to trade at: http://www.teleport.com/~bensmith/bscomputers.shtml or E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitor, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse

Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in

each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations...
At one link you'll find a Web Site with Michael Currents List of
Developers and Others who Support Atari. And Bravo Sierra Computers is
on the list. Also, you can find A list of Atari Support on BSC's Web
Site. The Atari Developers, Sellers & ReSellers of Atari that I go to
for Help.

GNU binutils already include lots of binary formats. Not including the
Atari's one by default, but there is a patch to add it (to an old version,
and I've no idea whether it would apply cleanly to a current version).

MB> host c.s.a.st and c.s.a.st.tech.

I have a similar problem. It seems you have to connect to this news server
in the middle of the night to have a good speed.

BTW for INN it's a matter of configuring it more than the version itself but
I think others will be more accurate on this point.

Bye Martin,

Hi Uwe,

Then how do you suggest we manage to read/write VFAT longnames on
a floppy, WITHOUT INSTALLING MAGIC?

There would be a need for an VFAT.XFS under MiNT (Sven Karlsen made
a small utility that allows copying a whole VFAT floppy onto minix,
but you cannot read single files, you have to swap the whole floppy),
or even something like a new (stable) version of BigDOS that supports
VFAT, but none exists..... unless you know someone who made one?

1200. Scanner problems on the Atari

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: Alyre Chiasson <alyre.chiasson@fundp.ac.be>
Message-ID: <62qmt8$jem@hermes.fundp.ac.be>
Source record: 114806

My brother's TT is acting up and he plans to send it away for repairs. I have given him my Mega Ste in the meantime. On his TT he had an Espon flatbed scanner (SCSI) running under Look II software and ICD Pro driver.

He is having problems getting this to run on my MegaSte. The internal SCSI adapter is flaky so I have been running the internal drive off of my Link II (with the internal adapter removed), as well as my Syquest 270 cartridge drive with no problem. He has a Syquest 150 and it works just fine as a second drive as well.

HOWEVER, if he plugs in his Epson Scanner alone as a second device instead of the Syquest, drive C become unavailable. The ICD ID utility picks up on the presence of the scanner and the hard drive, there is no ID conflict, we are sure. The scanner is not terminated which I believe should be the case for a MegaSte. I know my Syquest as a second device off the Link II only works if termination is removed.

Any suggestions as to the problem. I thought the Link II was suppose to accept any SCSI device including scanners. I don't know what to suggest to him as the source of the problem other than the Link II only works with certain SCSI devices? He can't even access the Look II software because it is on the hard drive which is not accessible.

He needs the scanner for his work as a consultant, your help, any suggestions are very much needed and appreciated.

Alyre Chiasson

1201. Computer Direct?

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC

Message-ID: <877698456_OASIS_@pcc-uky.campus.mci.net>
Source record: 114807

Okay, in a couple of weeks, I'm getting my Christmas bonus, and I am getting a multi-gig hard drive for the BBS. I'll need HDDriver, and I'll need the Link 97. Is there a problem with ordering anything from Computer Direct? I have seen a couple of messages that makes me wonder if anything is going on with them? I always thought they were a very reliable outfit. If I can't get HDDriver (7.0?) and the Link 97 from them, then where in North America can I get them? Thanks in advance for any info...! :)

1202. New at Systems For Tomorrow (October 23rd,1997)

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <62qnba$v5@uucp.tfs.net>
Source record: 114808

New at Systems For Tomorrow October, 23rd 1997
~~~~~~~~~~~~~~~~~~~~~~~~~~

CAB 2.5 /w PPP Connect for TOS Computers $49.99
The long awaited update to CAB is now shipping in the UK. Our first batch is expected in next week, and we are taking orders now. CAB 2.5 includes several new features and Plug-Ins, plus it includes PPP Connect, a TCPIP stack for MagiC, to allow easy internet WWW access. From System Solutions.

Aazohm Krypht for Falcon030 $49.99
Enter the merciless world of Aazohm Krypht and confront 5 different fighters in a True Color battle to the death. This is a beat-um-up style fighting game like Kasumi Ninja or Mortal Combat. It contains violence and some bad language, so it's not for the kids. Must be 18 to buy. From Logitron.

Zero 5 for Jaguar $59.99
Zero 5 is a futuristic space shooter set in a 3-D, 360 degree playfield. The year is 2044 and the battle for Earth has begun. Multiple weapons, driving soundtrack, non-stop combat, multiple power ups, and 15 extended missions contribute to a shooters game with real depth. From Telegames.

Radical Race for Falcon030 $49.99
Radical Race is an exciting new top view racing game (ala Power Drive Rally on the Jaguar) with an important difference: guns! Requires 4MB RAM and a Hard Drive. Jaguar PowerPads are supported. From Logitron.

Xplore CD for TOS Computers $24.99
This German disc contains mostly German PD and Shareware software (How did that happen?) Also includes a collection of fonts and graphics for Calamus. Plus a few full version programs such as□ the ToXis virus killer. From Seidel Softwareservice.

MIDI Arpeggiator for TOS Computers $27.99
MIDI Arpeggiator is a mini-MIDI sequencer for creating arpeggios with your MIDI sound module or keyboard. The software can be used as either a compliment to a MIDI sequencer (as patterns can be saved as MIDI files), or as a live sequencing tool. It's Main features include: Two tracks of variable lengths (between two and sixteen steps) * Various play modes: backwards, forwards, ping-pong, random * Traditional arpeggiator-style chord buffer mode * Built-in MIDI mixer with user-programmable auxiliaries * Export sequences as type 1 MIDI files Record entire performances
~~~~~~~~~~~~~~~~~~~~~~~~~~

to disk as type 0 MIDI files * Real-time input using MIDI or built-in keyboard controller * Auto-generating harmony part MIDI synchronisation, program change, and tempo settings * On-line hypertext manual using ST-Guide

In a recent issue of Atari Computing (issue #4), MIDI Arpeggiator was awarded 85%; the pros mentioned the "amazing price, on going development" and that it's "great fun"! Requires 1MB RAM, 640x400 Minimum resolution. From Electronic Cow Software.

Sound Chip Synth for TOS Computers $19.99
Sound Chip Synth is a software-based sound synthesiser that uses the built-in FM sound chip inside the ST to generate analogue-style bleeps and squidges. These noises are created from a range of synthesis functions including: oscillator select, tuning (fine and coarse), envelope generator, and amplitude modulation. Once synthesised, these sounds can be played within the software (using Sound Chip's MIDI capabilities), or exported as AVR samples for use in other programs. It's Main features include: Sample export, with variable pulse width settings and co-processor support * New multiple window system - all dialogue boxes are now in windows * Choose between three different waveform types (square, triangle, and sawtooth) * a choice of 8- or 16-bit sample export (AVR or RAW formats) * user-definable MIDI performance controllers * Five eight-stage envelope generators * On-screen controller keyboard, or playback via MIDI control * Three tone and three noise oscillators * On-line hypertext manual using ST-Guide

A recent review in Atari Computing issue 2 (December 1996) gave the software 85%, stating that: "SCS is an attractively-designed, easy-to-use program... the program excels at what it does, and the results speak for themselves." Requires 1MB RAM, 640x400 Minimum resolution. From Electronic Cow Software.

Snippit Synth for TOS Computers $29.99
Creates hugely varied samples from tiny pieces of waveforms, using a granular synthesis technique (modelled on Denis Gabor's physics paper "Acoustical Quanta and the Theory of Hearing", published in 1947), and then save all your efforts as samples. It's Features Include: Control all three of the main sound elements of each composite grain: frequency, time, and amplitude * Broad range of dispersion patterns, algorithm types and additional functions * AVR, SPL, and AIFF sample export * MIDI sample dump (MMA) * Sound Replay on DMA Machines (STe/TT/Falcon). Requires 1MB RAM, 640x400 Minimum resolution. From Electronic Cow Software.

Also Available:
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Power Up $19.99 Racing fun for ST/STe/TT/Falcon

Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
MIDI Maze $4.99 The classic happy face shooter!
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

It's amazing what you learn, isn't it! I'd never have thought that HD
drivers would interfere with the serial port.

For quite a while I was running the ICD kit along with the 4040-chip
serial port mod. No bother. Mind you, this was on an STM.

1204. Atari Internet survey

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: Christian Andersson <faltrion@alfaskop.net>
Message-ID: <3451105E.A3B8A35C@alfaskop.net>
Source record: 114810

Well, the last time I did this I got too poor results, perheps it was
the questions, or the fact that I dod not anounce it correctly....
anyway, here is the new one.

Atari Internet Survey

* How do you use the Atari for your internet access?

* http://www.alfaskop.net/~faltrion/Atari/survey_quest.html

* just fill in the form and press "press here to send your answers"

* the updating if this survey will be 1 time a week, both here and on
this site.
http://www.alfaskop.net/~faltrion/Atari/survey_res.html
which is not working at this moment.

Christian Andersson

Download a copy of "NOROACH" (you may find this in the TT sections of some
of the atari software archives like archives.umich.edu).

Sorry, but I can't answer your other questions. I don't do music stuff on
my machine and stopped using STalker some time ago.

Well there was that.... ahem nevermind <g>

> bugger!....thats 1.50 I wasted :))))

hehe

> hardly pirated.. you cant pirate freeware ?.. can ya? :))

I just assumed that they was making a profit out of freeware cos it costs
less that 35p for a disk and these were going for £1.50

> >pirated software, maybe I was not paying attention to some of the
stalls.
> ho it was there, a few people commented...

Well it's a good job I didn't spot it then wasn't it :)

Thats prolly why it kept crashing when I was using Calamus, I didn't have a
mono monitor but I am getting one now, so I put the multisync to use.

> >what is your point. I may have to use windoze but it doesn't mean I
have

> about it,

Maybe that is because you like it and are not forced to use it, I don't use this by natural choice I "HAVE" to use it, but I do as much as I can on the ST. I have been downloading ST stuff for the past few months and hope to get it up and running, and if I can't get PPP connect I may have to defect to Zetnet.

> and to put the record straight.. I do my programming on the ATARI:)

Hehe, just to avoid being flamed that comment innit <g> :)

I am using CAB 2.0a with the latest STiNG and get fast and reliable
transfers. To be honest, this does not sound like a STiNG problem.

What CAB.OVL are you running, Pantelis? There were some problems with
earlier versions - I am using v1.2618.

I had Paul Rossiter fit the el-cheapo mod to my STe and it would not
work reliably above 19200 baud. If I set the port to 38400 I'd get all
kinds of errors and retries with my BinkleyTerm and CiXComm connections
so the overall rate was actually slower. In the end I cured it by
binning the ICD HD drivers I'd been using and moving onto HDdriver.
After that the same kit in the same configuration worked like a charm at
38400 and gave me very good transfer speeds which I didn't exceed until
I got a Falcon for my BBS machine.

Nagh thats what PD Libaraies charge, they also have to pay for the
buisness, especialy goodmans who you are reffering to, they do a lot
of advertising and send out paper based catalogues and cat' updates
littraly to thousands of atarians world wide, plus leccy bill ect ?

>> >pirated software, maybe I was not paying attention to some of the

yes for backups you silly person you!, not having a HD for my ST, it
makes sense to backup everything onto the HD, then when on internet or
irc or wh=atever I will have easy access to it for sending :)

>Pacifist is good but it aint "that" good. Gimme an ST anyday, or better
>still a Falcon <hint> :)

see your doing it again.. I dont use pacifist for anything like that,
my main reason for pacifist are checking the web pages are cab
compatable, and for viewing atari files sent over irc?, ie: artwork
can be looked at and commented on instantly :)

>> and to put the record straight.. I do my programming on the ATARI:)
>
>Hehe, just to avoid being flamed that comment innit <g> :)

well you mentioned it, i also read it in maggie diskzine and a few
other places.. I may use an emulator to do a quick patch or update if
its an emergency at night and i cant get to the atari (in kids
bedroom), but actualy proghramming? yuk,
the thought is insulting in a warped sort of way, maybe i should
carry a dissclaimer on the next game... "Made on an ATARI" HEHEHEHE

From: Satcom2 <svenhard@primenet.com>
Message-ID: <62r95q$21v@nntp02.primenet.com>
Source record: 114822

is there a way to run programs written for rgb/tv mode on a regular vga monitor? I have some games that only work on a tv, but this sucks. thanks. satcom2

1217. rgb on vga! weird news!

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <62rb1p$38p@nntp02.primenet.com>
Source record: 114823

Literally seconds after I posted the question about running rgb/tv Falcon stuff on a vga monitor, I accidently plugged my monitor cable partially into my Falcon a certain way and the desktop came up all small and flickery, like it does on a TV. At first I thought my computer was screwed up somehow, until I noticed the plug. I found a secret trick! I was even running tv/rgb specific stuff on my crisp monitor, and it all looked perfect! I am still wondering if there is maybe a special adaptor to do this with, or a software hack, since I dont really want to have to twiddle with a partially plugged in cord all the time, I might screw something up that way. One last comment/question : why is it that Atari always did some dumb thing to have this weird orphan resolution on their computers, like how you couldnt run mono stuff on a color monitor, then it turns out you can run mono stuff on color, and now rgb on vga? Why didnt they just do it right to begin with? Argh! -Satcom2

It's worth trying a complete re-install of CAB (don't keep any files).
There seems to be some mystery with CAB. I couldn't get anywhere with
CAB 1.5, using Sting or Stik, or with demo of CAB2 using Stik, even
after re-installing. But CAB 2 demo with Sting 1.06 seems OK for me.
Others have had no problems with CAB.

1220. FS: Winnipeg Atari ST User Group fundraiser blowout! REDUCED!

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: Trevor Cordes <trevor@cyberspc.mb.ca>
Message-ID: <877739002.41C6@cyberspc.mb.ca>
Source record: 114826

GIANT ATARI ST HARDWARE / SOFTWARE / MAGAZINE / BOOK BLOWOUT!

The Winnipeg ST User's Group (STUG) is having a huge fundraiser to help keep our still-going-strong user group in good health, clear out some useful software that isn't getting much use, and help members do the same. The majority of the proceeds from all sales will go directly towards helping the club which has been promoting Atari since 1986 in Manitoba, Canada.

Please look through our list and pick out something you can provide a good home to. All hardware/software is fully guarenteed for 2 weeks from receipt. Everything comes with full email tech support from a knowledgable STUG member, we'll try our best to help you out!

If you want a whole bunch of stuff, discounts are available. Let us know what you think is a fair price. We just want good homes for all this STuff!

Every item purchased includes an issue of Atari User magazine FREE! Please specify which issues you want or random.

All prices are in US$ funds as most sales tend to be to the US and so it makes everything easier that way. Canadian prices should be calculated accordingly.

Shipping is extra and NOT included in the price listed.

Thanks for helping out our user group!

Trevor Cordes - STUG President
trevor@cyberspc.mb.ca

CD-Recordable service - unrelated to STUG, it is my own company, but
worth mentioning here. STUG recently moved its nearly 1000 library
PD floppies to CD-ROM - never again worried with faulty floppies!

We can move your data or audio to compact discs and CD-ROMs! Over 800
Atari floppies per CD-ROM!

Pricing from $9 to $50 per disc depending on the data and how it is
delivered to me (ie hard drive or syquest is cheaper than floppies).
Email for more info.

==========
WANTED

But it doesnt matter how long into the future the computer handles the time correctly, its a matter of is the software you are using is aware of the difference in time. Even if the computer does 2001 correctly, your checkbook program, or other financial software is very well screwed. Since most of these companies are out of business, you'll never have someone fix the bug.

GH> docs are German or English.

It's not too much of a problem, because the updates are generally available.

GH> Nevertheless: http://members.aol.com/hoffart/software.html gives you
GH> the international version of GEMJing - with docs in German, English
GH> and French and resource files for many other languages.

Yes, thanks.

1224. ST Games on a Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: Michael Clemmetsen <m.clemmetsen@sunderland.ac.uk>
Message-ID: <3450A343.28481A6E@sunderland.ac.uk>
Source record: 114830

Hi All,

I thought I'd try Epic (one of my few remaining ST games) on my Falcon
as the compatability list says it should run without a problem.

However I've been having problems so I have a few (obvious?) questions:

1. Can you only play games via a TV connection to the Falcon or will
they run just as well with a VGA monitor?

2. Is there some setting to the VRAM that needs to be made before you
can play games?

3. I seem to remember that Epic would not run on 4MB machines. Could
this apply to 4MB Falcons? Is there a way round this? Has anyone got
this game to run on a Falcon? If so How?

Thanks for any advise,

Michael

From: guitarmn@earth.execpc.com
Message-ID: <62r2j2qde1@earth.execpc.com>
Source record: 114833

Hi, guys!
1. How do I get my Falcon to skip the (tedious) 14meg memory check?
2. When using my 14400 modem I can only set stik for 9600, not 19200, because when I log on to my ISP it connects at 14400 but then the screen consists of gibberish. Any ideas?
3. Does anyone have the audio portions of Cubase 2.06's manual that they could (would) send me?
4. Does anyone use any other HD recording software besides Logic and Cubase?
5. Why can I use 8 simultaneous tracks in Cubase without a problem but after 5 tracks Logic begins to stutter?
6. Does anyone have a list of bugs for both Logic Audio and Cubase Audio?
7. Why does Stalker refuse to work with my ISP's shell program after downloading only 2 files?

Thanks a zillion!

1228. RGB on VGA Falcon! Weird news!

Newsgroup: comp.sys.atari.st
Date: 1997-10-24 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <62rb1p$38j@nntp02.primenet.com>
Source record: 114834

Right after I posted if there was a way to run RGB/tv stuff on a VGA Falcon something freaky happened by coincidence, 1 in a million it would happen literally seconds after my post! I plugged my vga monitor in partially by accident and lo and behold, what the hell? it booted up in TV mode on my VGA monitor!!! I am tripping out so hard! And I ran Pinball Dreams, the tv only pinball game and it WORKED! Well, I guess I sorta answered my question, except I am still curious if there are special adaptors that can do this automatically or if there is a software hack to switch between these modes, I am not sure if I will be able to reproduce this at will, although I will try today.(i hope i dont screw my monitor up :P) -Satcom2

FROM: SSweet@fortress.org.uk
SUBJ: New CAB/CAB.OVL ???

>> r> I will not trust them again!

>> Really Roger, you are overstating your case. It's not long since both
>> Rob Perry and Antony Cambrey left SysSol, so it's not surprising they're
>> a bit slow right.

r> .. so have they replaced the staff?

One has been replaced.

r> Why can't they be more accurate about availability rather than always "+
r> 2 weeks"?

Can you predict when a piece of software is going to be complete?.
No one is more sorry than Karl that he's run out of specific pieces of
software, but he's sure as hell getting the problem sorted.

r> Why don't they satisfy outstanding orders before selling the product
r> OTC?

They are, demand is such that more has to be produced.

r> Why can't they answer e-mails?

Their website is currently being re-vamped and brought into the 20th century.
r> It's not just that they are slow that annoys me.

Its a pity a few more peop's dont know a bit more about the human side of the
good ship SYS-SOL, do any of you realise that most nights Karl doesnt leave
the service bench till gone 11, he's working his arse off.

>
> Would have been betetr the full review in the show issue?, as its
> well current and up to date?

AYK you gave me a few things to think about when we talked about this, still, it's now back in the hands of Dave at TUS however, I'm hopeing to get hold of the new accellerator/IDE interface combo board :))))

Provisional plans are:

min 16MHZ accellerator + IDE interface + clock and more [IIRC], all fitted on to ONE VERY SMALL PCB, just a few connecttions to the main motherboard and your away, provisional price, about 100UKP, this is NOT definate however, Dave has subbmitted the plans for production and the first batch should be about around early to mid November.

ST+ WILL carry a complete review, I might just sell my ADSpeeD card and use that dosh to finance the purchace of this, the main reason I didn't keep the IDEla board etc. was that I'm used to 16MHZ on my STe <g>.

With the new card it's the best of both worlds ;)))))

More as and when mate ;))

BTW, ALL copies of the ST+ show special were sold out on Sarturday, had to print a rush lot on saturday night, they all sold out within an hour of the Sunday show, we /could/ have solf more but Gordon [the nice blokie who printed the mini-mag] ran out of ink :((((

Next show might see a 16 page minimag again with 2 disk special....at this rate we'll be giving AC a run for their money....<vbg>.... :))

You don't have to be embarressed 'cause PPPConnect is most certainly NOT MagiC
only. I run it perfectly well under MiNT/N.AES on my Hades060. Preemptive
multitasking is required thought. Now (since Peter released a working PPP
connection) I use STiNG instead because it gives me full access to
mail/news/ftp which I could not achieve with PPPConnect.

ST Informer Magazine- Refunds

Anyone ever get a refund from their incomplete subscriptions?

Sent e-mail and a copy of my payment slip a long time ago and was told that a refund was in the works. Never received a dime.

If anyone knows anything or can shine light on the subject I would like to hear about it! I'm sure I am not the only one that never got a refund and would like to settle this matter once and for all with the publisher of the magazine. Too many times I got ripped off from defunct Atari magazines and would hope that the publisher would have the honesty to refund that which was not delivered.

Please, let me know what is going on with ST Informer Magazine.

Nope, it's the mod that was in ST Format/Atari World some time since. And to
make matters worse, I don't use Magic, which would be a great help. I'm,
still using plain, ordinary TOS 1.62.

> other STinG modules are.

I've copied the resolve.stx twice, and the cache.dns once, into the folder
where all the modules are. It still moans about it not being there though.
It's not every time that I get the DNS error, but about 8 out of 10 times.

> Observe the bootup message. It displays the name of every loaded module. RESOLVE
> must be amongst those.

Yep, the screen display is as below:

Loading Modules: SERIAL, TCP, UDP, RESOLVER,
DNS cache load failed !!!

1242. ATARI CD's

Has anyone got any recent ATARI CD's, general ones with bits of
everything on them ?, I would like to see an index of files for any or
all CD's, something that shows exactly whats on them :)

So has anyone got a CD pretty recent and can send a listing please :)

ALSO!

Is a CD full of PD and SHARWARE and FREEWARE ect sold for 20 quid or
more.. ethical ?, is it still PD or is someone making money from PD
authors,

Maybe you can guess why I want the listings ????

I don't use PD lib's, but it would be useful finding out how much the costs
are for my project.

> then dont?.....

I have to, that is my problem. If I didn't have to use it then I wouldn't.
The first chance I get at offloading it I will take, but that might not be
for another year or so. I can guarantee that I won't be spending any money
on it.

> yes for backups you silly person you!, not having a HD for my ST, it

Hi !

I am looking for old Text - Advenutres. I am especially looking for

- Scapeghost from Level 9 Computing (Atari ST, Amiga, PC, ...)
- Fish! from Magnetic Scrolls (Atari ST, Amiga, PC, ...)
- Corruption from Magnetic Scrolls (Amiga version only)
- Ingrid's Back - Gnome Ranger II (Atari ST, Amiga, PC, ...)

I am also looking for other Level 9 / Magnetic Scrolls / Infocom games. If you want to sell your original, please let me know.

Best,

Peter Schoen

This is exactally the same thing that happends with my EZ 135s. It used
to work:). Uwe had said that the device inquiry is more extensive now.
I tested on a standard Falcon, TT with Link and SCSI, and a 1040ST
with Link. All report the devices as EZ's without the cart, and as an
adaptac with one inserted. I however cannot access the cart if I leave
it inserted during bootup. V6.0 is much more forgiving and work fine.

Mike

1252. HELP: 1040STF monitor hookup

Newsgroup: comp.sys.atari.st
Date: 1997-10-25 00:00:00 UTC
From: glacial@theglobal.net
Message-ID: <glacial-2510971802580001@204.160.192.210>
Source record: 114710
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello:

I recently picked up a 1040STF at a Salvation Army, and was pleased because I am somewhat a collector of old computer systems (especially since the games ROCK!).

I thought it wouldn't be a problem to either hook it into my Commodore 1702 composite monitor or to my NEC Multisyc 3D, which I switch off between my Power Computing Mac Clone and my Amiga 600.

Unfortunately, neither one of these scenarios is working. I followed the pinouts available on the internet as best I could but got nothing. When I was initially playing with that alien 13-pin DIN monitor connetor and the 1702, I got a startup screen for a Gauntlet ST disk I have. The initial text looked ok (guess I was in monochrome port) but then the desktop reverted to a garbly looking text.

My initial question of course is this...what other pins are required for a bare minimum composite connection? Do any of the syncs need to be connected? I tried using pin 2 composite and pin 13 ground but get some crap on the screen.

As for the RGB, I will continue to research that but wonder if you could offer some insights. I am very used to cranking out these types of cables for my C128, Sega, etc.

Thanks! (please reply via e-mail)

James

I fairly regularly transfer files between a PC at work and my Falcon.
I have noticed that sometimes the free space shown and volume name
can become corrupted, after which I format as soon as possible.
My way around this is to format on the Falcon, copy the files from
the PC to the Atari and then re-format the floppy each time.

Another thing I have noticed, whether it is related I don't know, is
that if I drag'n'drop a folder from the Falcon HD a PC (Win95)
formatted floppy the Atari crashes. But if I create the folder
separately, using the menu option, and then copy the contentsit is
OK.

Rich.

Here's an idea for a project...find out which plugs aren't conencted when
it's "partialy" plugged in and make a switchbox that can turn off certain
signels so you can run RGB/TV stuff. You may have stumble onto a terrific
idea :)

Hmmm...can you really run mono programs on a color monitor? I know there
are mono emulators like Sebra which is good for games and occasional work,
but RGB monitors are just not ment for the high resolution that mono
requires. Such is life...

Hiyawl....

A big thank you to all who brought the ST+ Show special, demand FAR exceeded our expectations, we did in fact have to rush another print run late saturday night as we sold all but 5 issue's on Saturday at the Birmingham UK Atari show

Within a few hours on the Sunday [at London] we sold ALL remaining issue's, this is surely as much a testimony to both ST+'s commitment and quality as it is to the dedication of the Atari community, my thanks and best wishes go out to all our readers.

See you at the next shows, I'll let you know about them as soon as I have conformation from Mike Goodman :))

I have a few mega 2's and I am thinking of selling one. I guess you can pick your flavor...
I have mega 2 (no keyboard)
I have mega 2 with internal HD (no keyboard)
I have 1 mega 2 keyboard (only sold with a mega 2)
sc1224 (old style color)
sc1224 (new style)
sm124? (monochrome monitor)

I have some external disc drives.
Atari made (314, 354?)
aftermarket 3 1/2 (have to check)
aftermarket 5 1/4 (have to check)

Make me a offer. I am in the san francisco bay area. I have some software. Ask me what you want.

Also a buddie of mine has a REAL 4160ste!!!! If your interested in that sort of stuff, email me.

Also if you ever had a desire to own an amiga 1000 system, I have an extra....

1262. 60's clock

Newsgroup: comp.sys.atari.st
Date: 1997-10-25 00:00:00 UTC
From: centek <centek@eeb.fr>
Message-ID: <01bce189$ef486700$LocalHost@p-d-mou>
Source record: 114720

THE MC68060 CLOCK

Some people and some companies, especially french ones, announce
the 68060 to be cadenced at 120 MHz on the HADES 060.
This is totally wrong and only reflects the technical ignorance
about the 68060 and the marketing lies of some companies !

The 060 is cadenced by only one clock : the CLK (that is the PCLK
of the 040 socket !).

You have to know that the 060 is built with the 'STATIC' technology
that allows this 060 to be cadenced with lower frequencies, even 0 MHz
(no clock at all) in the purpose to reduce consummation as much as
possible... But, the way to exit this mode is to send a non-masked
interrupt or a RESET to the 060.

Therefore, the 060 has an internal clock control logic which
itself is also cadenced by an internal clock, which works constantly !
Yes, it's this logic which gets the interrupt and exits the 060 from its
'low power mode'. This is also the logic which stops or starts the
PLL (phase-lock loop), which has to synchronize the external clock with
the internal clock ! It constantly monitors this PLL and if unphased,
returns an external signal LOC/ (Loss Of Clock).
This signal, for example, is a variation of the CLK sent to the processor.
The clock can only be modified during RESET or LOW POWER MODE !
Therefore, the 060 can't (in real time) do an external DX2 like it is
possible on some accelerator cards (CENTurbo II, CENTurbo I 20/40 (1st
generation), Speed Resolution Card, etc...).

Let's turn theory into practice :
Just a little demonstration with a FALCON, an HADES 060, and GEMBENCH
4.03 with the INTEGER DIV test which consists of DIVU.W dx,dx.
We read the timings for this DIVU in the Motorola DATABOOK of the 030
and the 060.
For the 030: 44 clock cycles to execute the DIVU.
For the 060: 22 clock cycles to execute the DIVU.
We launch GEMBENCH 4.03 and the INTEGER DIV test (ref. FALCON) on :
FALCON STANDARD 16 MHz : 100 % (normal !).
HADES 060 at 60 MHz (!): 320 % (767 %).

Here is the equation, no comment.
68060 at 60 MHz = (44/22) x (60/16) = 7.50 or 750 %

On the one hand, we have the theory with the DATABOOK (if some people
want to interpret the DATABOOK differently, we ARE LISTENING!) which
gives 750 and on the other hand, a real test on a machine which gives

767 !
So, the hypothesis for the 060 at 60 MHz is proven correct.
If the 060 was at 120 MHz, like some people would stupidely like us to
believe, the gembench test should have been closer to :

1500 = (44/22) x (120/16) !

Remark : The BUS of the HADES 060 is cadenced at 30 MHz !

A little bit of COMMON SENSE : why would a processor manufacturer
announce on its processors a clock which would only be half of what the
processor calculates for real ?!! Have you ever seen, a manufacturer
half under-estimating its products against the competition?
Moreover, to not even talk about it in its documentations ??!!!
Us, Never !

CONCLUSION : The 68060 is cadenced at 60 MHz (the clock input !)
even if there is an internal DX2 clock !

Rodolphe Czuba
Sacha Hnatiuk
David Godec
Thanks to Emmanuel Barranger (EB MODEL) for his help.

My only regret is the same as the one about the 040 !
Moral : before believing and/or stupidly repeating the proposals of
others, verify for yourself, or verify it with REAL professionals!

1263. 40's clock

Newsgroup: comp.sys.atari.st
Date: 1997-10-25 00:00:00 UTC
From: centek <centek@eeb.fr>
Message-ID: <01bce18a$5df7f940$LocalHost@p-d-mou>
Source record: 114721

THE MC68040 AND MC68040V CLOCKS

Some people and some companies, especially french ones, announce
the 68040 to be cadenced at 64 MHz on the AFTERBURNER 040 or on
the HADES 040.
This is totally wrong and only reflects the technical ignorance
about the 68040!

The 040 is cadenced by two clocks: the BCLK and the PCLK.
The BCLK (Bus CLocK) cadences the processor, its bus controller, as
well as the entire calculation unit (and the floating unit for
the 'full' 040, meaning with a FPU).
The Motorola DATA BOOK for the 040 is very clear about it because
on page 10-4, we can read: 'All timings are related to BCLK cycles...'
By all means, when you read the instruction timing tables for the
040, and for example, it says that the XXXX instruction is 4 cycles
that means that this instruction is executed in 4 clock BCLK cycles!!
About the PCLK (Processor CLocK), the 040 needs it to cadence its
internal logic, especially its pipeline.
This clock could be 200 or 500 MHz, which wouldn't change the
performance of the 040 !!
In this case, the PCLK is twice the BCLK with a phase shift + or -
250 to 500 ps depending on the clock generator used.
With regards to the design, you can give a PCLK divided by 2 to get
the BCLK.
A more popular approach is the opposite starting with a BCLK multiplied
by 2 with a circuit to obtain the PCLK.
Motorola proposes a MC88915 circuit, which is also used
by the Afterburner.

A remark : the 040 3.3V model only exists in two versions :
- The 68040V which doesn't have an FPU !
- The 68EC040V which has neither an FPU, nor a PMMU !

These two versions are identical to the 5V version regarding the
performance (otherwise, where are the instruction timing tables of
this 3.3V version in the DATABOOK which talks about ALL 040 models ?!!).
The only differences are the 'LOW POWER' possibilities of this 3.3v
version which are explained in the appendix C of the 040 DATA
BOOK. With the version V (like on the 060 !!), there's only one clock
injected in the processor : CLK (CLocK).
Of course, this clock is equal to the BCLK, located at the same
place on the casing as the BCLK !
So why only one clock and what happened to the PCLK ?
You have to know that the 'STATIC' technology allows this 040 (and the 060)

to be cadenced with lower frequencies, even 0 MHz (no clock at all) in
the purpose to reduce consummation as much as possible...
But, the way to exit this mode is to send a non-masked interrupt to the
040.

Therefore, the 040 (and the 060) has an internal clock control logic which
itself is also cadenced by an internal clock, which works constantly !
Yes, it's this logic which gets the interrupt and exits the 040 from its
'low power mode'. This is also the logic which stops or starts the
PLL (phase-lock loop), which has to synchronize the external clock with
the internal clock ! It constantly monitors this PLL and if unphased,
returns an external signal LOC/ (Loss Of Clock).
This signal, for example, is a variation of the CLK sent to the processor.
The clock can only be modified during RESET or LOW POWER MODE !
In the case of an active LOC, it is necessary to send a RESET to
the processor, restarting it again in NORMAL mode.
Therefore, the 040, as well as the 060 can't (in real time) do an
external DX2 like it is possible on some accelerator cards (CENTurbo
II, CENTurbo I 20/40 (1st generation), Speed Resolution Card, etc...).

Let's turn theory into practice:
Just a little demonstration with a FALCON, an Afterburner 040, and
GEMBENCH 4.03 with the INTEGER DIV test which consists of DIVU.W dx,dx.
We read the timings for this DIVU in the Motorola DATABOOK of the 030
and the 040.
For the 030: 44 clock cycles.
For the 040: 27 clock cycles.
We launch GEMBENCH 4.03 and the INTEGER DIV test (ref. FALCON) on:
FALCON STANDARD 16 MHz: 100 % (normal !).
FALCON + AB40 at 32 MHz: 320 % (411 % at 40 MHz).

Here is the equation, no comment.
68040 at 32 MHz = (44/27) x (32/16) = 3.26 or 326 %

On the one hand, we have the theory with the DATABOOK (if some people want
to interpret the DATABOOK differently, we ARE LISTENING!) which gives 326
and on the other hand, a real test on a machine which gives 320 !
So, the hypothesis for the 040 at 32 MHz is proven correct.
If the 040 was at 64 MHz, like some people would like us to believe,
the gembench test should have been closer to:

652 = (44/27) x (64/16) !

A little bit of COMMON SENSE : why would a processor manufacturer
announce on its processors a clock which would only be half of what the
processor calculates for real ?!! Have you ever seen, a manufacturer
half under-estimating its products against the competition?
Moreover, to not even talk about it in its documentations ??!!!
Us, Never !

CONCLUSION : the 68040 is cadenced by the BCLK !

Rodolphe Czuba
Sacha Hnatiuk
David Godec

My only regret is that I placed confidence in what a person and a magazine said, so I announced the same crap in the first version of the PHENIX 040/060 presentation file before discovering the truth myself (during the PHENIX development).
Unfortunately, a lot of people are still fooled by this falsified information ! Some even were hoodwinked into buying...

Moral : before believing and/or stupidly repeating the proposals of others, verify for yourself, or verify it with REAL professionals!

Rodolphe Czuba

FALCON + AB040 32 MHz : 312 % (414 % at 40 MHz).

Here is the equation, no comment.
68040 at 32 MHz = (44/27) x (32/16) = 3.26 or 326 %

On the one hand, we have the theory with the DATABOOK (if some people
want to interpret the DATABOOK differently, we ARE LISTENING !) which
gives 326 and on the other hand, a real test on a machine which gives
312 !
So, the hypothesis for the 040 at 32 MHz is proven correct.
If the 040 was at 64 MHz, like some people would like us to believe,
the gembench test should have been closer to :

652 = (44/27 x (64/16) !

It's supposed to be auto-terminating, and it seems to work fine, so I'm not that bothered about it. Actually, though, it seems to depend on what cartridge (if any) is in the thing during boot-up; no cart, and it identifies itself correctly; a cart with one partition, and it doesn't; two partitions, and it does (I haven't investigated what happens with more partitions).

Another slightly more annoying "feature" is that if I boot up with a cart in the drive, I can only access as many partitions as are on that cart, even if I later replace it with one with more partitions. If I boot up without a cart, I can access as many partitions as I like, up to the maximum number set in HD Driver.

There are STFM with enhanced STe bits, or fully STe plus Falcon bits
in most of my games, all available at the url in my sig, and all
pretty new with about 4 or 5 released in the last 12 months, plus lots
more, and its all FREE! go gerrem ! :)

1270. Help needed please for Atari ST and CAB2.5

Newsgroup: comp.sys.atari.st
Date: 1997-10-25 00:00:00 UTC
From: "Gateway 2000 Licensed User." <NPTurton@msn.com>
Message-ID: <01bce197$7c08e400$ee4c95c1@default>
Source record: 114728

I wonder if anyone can help me here

Ive just bought CAB2.5 from system solutions and would like some help to get my Atari on the net, I'm using a PC at present to post this but here goes.

I have both 1MB STFM and a 4MB STE with TOS 1.09 STFM and TOS 1.62 STE, I also have TOS 2.0 on my hard drive.

I have not yet got a modem for the ST's and both have the standard serial ports

what I need to know is:

1. will CAB run ok with normal TOS or what do I need

2. What speed modem should I get and what upgrades to the serial ports do i need to do if any

3. I connect to the Net via MSN is there any limitation here with regards to connection via a PPP server?

your help would be greatly apprechiated, I have only just started with getting my beloved Atari's onto the net so please help

Folks,

Here is the fix for the 50hz screen snafu.

* Inside of the MAGX.INF folder I make sure to have

#_AUT C:\FORTH.TOS

* The above must apear before #_CTR in MAGX.INF

* In the root directory place two files, FORTH.TOS and AUTO.FTH
FORTH.TOS is Forthmacs, and AUTO.FTH is a file of Forth source code
which Forthmacs reads each time it is loaded.

* Here is the contents of AUTO.FTH

```
\ ***** sets the screen to NTSC mode *****

hex

ff820a constant synchronization-mode
0 constant ntsc
2 constant pal

: >ntsc ntsc synchronization-mode c! ;

: >pal pal synchronization-mode c! ;

decimal

>ntsc
```

bye

* MagiC will load Forth and run the above source code which switches
the screen, and then exits. After which the desktop boots up and there
you are.

w>
h>> Someone will correct me if I'm wrong here, but I thought that the
h>> refresh rate was saved in the DESKTOP.INF or NEWDESK.INF file in
h>> TOS. It would seem that the default MAGX.INF file is set with a 50Hz
h>> refresh rate.
w> I looked in DESKTOP.INF and couldn't see anything pertaining to Hz in
w> there.

It wouldn't be explicitly stated - it'd be one of the numbers, I'd guess.

w> I have never used or seen NEWDESK.INF in my life. That goes with the
w> Ataris MultiTOS doesn't it? I am moving from single tasking TOS.

Newdesk is used with TOS 2.06. I meant whichever one that was applicable.

h>> If that's true, disable MAGX.INF by renaming it and reboot with a
h>> utility that sets the refresh rate to 60Hz. Save a new MAGX.INF and
h>> then edit back in any previous settings (#_ENV lines etc) that you
h>> want in your setup.
w> I just read the section in the MagiC manual pertaining to the
w> MAGX.INF file and its parameters. Nope, nothing about screen Hz in
w> that either. ~:'/

Again I'm hoping that it's something set by one of the numbers.

w> I haven't tried to load MagiC just on its internal defaults yet. But
w> I have a hunch that it would come up in 50Hz anyway.

Probably. There was an old utility available that can be put into the AUTO
folder that sets the refresh rate to 60HZ. It may've been called 5060HZ or
summat. Alternatively, I think Harlekin or Mortimor had this facility.

w> It seems to start rolling before it reads MAGX.INF.

Hmmm... that could be a problem.

I've seen the other message from Terry Kelly saying that it may be something
that needs to be changed in MAGIC.RAM, which makes things a bit more
complicated. But if you've fixed it now, the subject may be academic

w> What version of MagiC are you guys using over there? What version of
w> MagiC are most people using in America? Did I get a disk which was
w> not fully tested on a 60Hz machine? I'm using 5.03 right now.

I'm waiting for the postman with my upgrade, but I'm using 5.03 atm too.

In fairness, there are quite afew things you need to get used to when upgrading from TOS - the saving grace being that it becomes second nature after a short while.

w> My first action in MagiC was to backup a disk with 40 files on it.
w> Disapointed was I when it was soon discovered that disk-swap-mania
w> was the thing when you only have 1 floppy drive, and don't copy to
w> the hard drive first. This desktop told me to swap disks at least
w> once per file, and sometimes twice, maybe three times per file. It
w> was henious.

Yes, I don't think much of floppy support tbh.

w> OTOH, the compatability and robustness seem very strong. I was able
w> to run Forthmacs with no problems, altho it was quite a bit more
w> pokey running through the window, rather than just from TOS. that was
w> because the VT52 was sucking up alot more bandwidth than TOS for
w> character IO. Well, VT52 has a lot more to do than TOS which explains
w> why. Things such as print characters which can be resized in a jiffy,
w> and output into a moveable window.

I'm glad it works at all tbh. TOS programs become something to avoid with Magic IMO. Every time I need to use one it's pretty horrific.

w> So far seems pretty decent.

Overall yes.

Well, if one does, then others will too, as the clients do not see whether
the underlying protocol is CSLIP, SLIP or PPP.

> AtarIRC: DNS Error; unable to resolve hostname

Have you tried the FracIRC alternative ? I usually use that one. Many people
prefer AtariIRC though, and I haven't got such a problem report.

> Finger: Error:

Lonny hasn't done anything on this for ages. I don't know if it works with
STinG. I should try eventually.

> Forecast: No Error (but nothing happens)

This one is ancient. It did not work well even with later versions of STiK.
You should forget it, or grab a C compiler and make a proper version.

> Newsie80: Asks for a password, then when I enter mine, it says that my
> host rejects it. (eof)
> POPWatch: Same thing as Newsie. I tried my password, no password, nothing
> worked...

I can only suspect this has to do with your ISP. It sounds as if your account
is a rather restricted one; if indeed everything has to go through proxies,
then you won't have any luck with IRC, Telnet etc. anyway. Ring your ISP and
ask them.

I should add two things.

First, I have yet to start a STiK client on my STinG setup and find it refuse
to work due to STiK - STinG incompatibilities. So far, everything worked, or
turned out to not work with STiK either.

Second, I found and fixed another bad bug in the SERIAL.STX, which caused
STinG to do no traffic after login, or even led to bombs. A new version is
imminent.

Right now the only generic solution is to install MiNT/MiNTnet with it's
Ethernet driver.

I'm working an a Ethernet driver for STinG that supports LANCE based adaptors
(i.e. Riebl, PAM). Some other guy is eager to port this driver to DEC hardware
once the driver is working.

Recently I have been twiddling with my monitor cable to display rgb games on my multisynch monitor. Just yesterday I noticed that when I turn on my Falcon the Atari logo comes up, but then the memory test comes up right on top of the logo! Then in the auto folder sequence, all the text that scrolls by is clipped on the right 3rd of the screen. When I boot up in RGB mode, the same happens, plus there are vertical parallel black lines on the extreme right side of the screen. This happens on my TV and monbitor both. I tried opening up my Falcon and pushing any loose socketed chips in, disconnecting the IDE drive in case it was a virus...but always the same new error. Did I possibly "fry" something just a little while experimenting with a half plugged in monitor cord? Or is this perhaps some sort of random bit-rot in my TOS chip? Everything else seems to run fine, once the desktop comes up, it is just in the initial TOS startup sequence that I notice this anomoly, and it happens every time I boot up. I have seen weird things like this happen, then go back to normal not to be seen again, my old STe for example has a quirky 16mhz upgrade socket that I regularly have to push down on to avoid bomb errors every few days, but this Falcon thinfg bothers me because I am now afraid to do my monitor "trick", also I am afraid that it might not be the trick at all but a computer about to go bad. Let me know what you think, if anyone is actually reading this! :) -Satcom2

Ethical, why not? They are providing a valuable service of collecting
and distributing the shareware programs to end users. Is it ethical for
the phone company to charge people to get your phone number? People have
been selling free information for years in the form of reference books.
How much time and money would it take you to collect, categorize, and
catalog all of the Atari shareware available. What if you had to run
every program and comment on its value. It also costs money to make and
label disks as well as to distribute them to retailers. In the Atari
world there are thousands of shareware programs on different ftp
archives in many different countries. The CD archivers are doing a
valuable service for both the authors and the end users when they
simplify this.

Think that I-Connect need MagiC, a Multitask System to work..
Use STiK to build your internet connection.
I don't no it will work with TOS 1.09 / 1.62, i can't check this.

>1. will CAB run ok with normal TOS or what do I need

With your TOS releases, i don't no. Sure with 2.06, 3.x (TT), 4.x (F030)

>2. What speed modem should I get and what upgrades to the serial ports do i
>need to do if any

Use HSmodem7 as seriall Driver. Smal and Fast.
In 1997 a 'normal' Modem had a 'Speed' of 28K8, better 33K6
(It's a question of your provider and his web speed)

If he have some ports with 33K6, use it! :)

>3. I connect to the Net via MSN is there any limitation here with regards
>to connection via a PPP server?

What's MSN? Your Provider?
PPP looks allways faster than SLIP. (A good chance to use STinG)

It's interesting that this effect can also happen with a ZIP. The question is: Why does it work on other systems except yours? As I already indicated the particular cartridge should have no effect at all on the drive reporting its name or other parameters. The hard disk driver doesn't even care for the data on a cartridge when inquiring the drive's name.

And by the time that year comes, Ataris will be like today's ZX Spectrum
(which has only 128k!)

FS Hardware

TT030 (it is a friends, if interested I can get info)
1040 stf (just added)
STE one meg
STE four meg
Mega STE four meg (sold!!)
ST 520 w/ one meg w/ extra power supply (sold!!)
SM147 mono monitor (rare w/ tilt swivel base)
(3) SC1224 color (just added another)

SC1224 (JVC early,best pict) (have extra cables, hard to find)
SC1435 color stereo (magnavox)
130 meg harddrive (sold!!)
(2) mouse masters
(3 mouse/joystick cable extenders
midi thru out cable
DS drive mech
Golden Image pen mouse
5 1/4 IB external drive (extra cables too)
Keytronics mice and regular atari mice

Software (all have boxes unless listed . for sale each cheap or add to hardware sale)

Applications:

ADI French 12/13
D10/110 Capture
Easy Draw (doc no box)
Warp 9 (doc no box)
Wordperfect disks only (unless I can find box and docs)

Games: (someone could have a great deal if they paid for shipping and gave me some extra money to make it worth my while)

NB-no box
NBD-no box or docs

Frontier Elite II Dungeon Master (nb)
Pipe Dream Editor for DM(nb)
Disciples of Steel Hint disk 1 for DM (NB)
Battle of Britain Chaos Strikes Back(NB)
Suspicious Cargo Utility disk for Chaos(NB)

: >browser)!!!
:
: CAB 2.5
: CAB 1.5
```

And I failed with CAB 2.0 and then with Netscape Communicator. So it seems impossible to submit the form with any Atari based browser and also with the most popular Windows browser.

That might explain the poor response ;-)

The problem always strikes me when I press the submit button.

Hi,
I would also like to Thank Peter R. for his great efforts.
I had left my ATARI internet communication limited to Mintnet
until I downloaded the latest STING yesterday, got it setup and
running beatifully. I get very good results through various
clients (i.e, CAB, Telnet).
Great job and keep up the good work.

Nima Montaser

P.S. I guess it is not a perfect world since there remains one tiny
glitch. See next message if you'd like to know.

Persist, Nima. I am using TT, STiNG 1.08 via Serial 2 at 115k2 and it
works very well. I can't see exactly what is going on but it may be
worth deleting all the STiNG related CPX and re-installing them for
Ser2./Lan. Don't forget you need to set the port in DIAL.SCR and
probably in ROUTE.TAB as well.

>Thanks again Peter and everybody else in credits list.

Seconded. A great product :-)

1296. Given up on Sting again (sorry Peter)

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: obroadway@cix.co.uk
Message-ID: <877909275.29697.0.nnrp-08.c2de4f5e@news.demon.co.uk>
Source record: 114658

I thought I'd give Sting another go with the new version, and it did seem to be chugging along more successfully than before, but then...

I just did my first news blink with the new Sting (using Newsie). Loads of articles came through with the beginning missing. In the worst cases, only the last few bytes of the article were present.

Reset Newsie's message pointers to what they were before, deleted all the new messages, and tried again... exactly the same problem, with exactly the same bits missing from exactly the same articles.

Reset message pointers, deleted new articles, tried again with STiK. All articles came down complete and intact. Everything absolutely tickety-boo.

So it's back to STiK for me, unless Peter or someone knows what the problem is and can tell me exactly how to solve it.

(Even then, I'll probably keep with STiK, because it's too much hassle to have to activate Sting with the CPX each time I want to use it.)

Ollie

Might be the bug that I just fixed ? Do you authenticate using PAP ?
With PAP it caused the worst problems. Look out for new binaries.

> *The worst is that it USED to work !* I HAVE been able to run CAB with

"Gateway 2000 Licensed User." <NPTurton@msn.com> writes:

> 1. will CAB run ok with normal TOS or what do I need

Normal TOS is alright, although you won't be able to use all of CAB's tools.
Normally this doesn't hurt much.

> 2. What speed modem should I get and what upgrades to the serial ports do i
> need to do if any

You don't need any upgrade if you're satisfied with a cheap 14400 bps modem.
A 33600 bps modem is capable of being 2.3 times as fast, but some ISPs are
so slow that you can't use all of the speed. You'd need the RSVE V2.2 hardware
patch for the serial port if you wanna use the higher speed of a 33600 bps
or 28800 bps modem.

In any case, get the HSMODA07 package, it contains much better serial drivers
than those in the TOS.

> 3. I connect to the Net via MSN is there any limitation here with regards
> to connection via a PPP server?

I haven't tried to connect to MSN, but I won't be surprised about anything,
as Microsoft seldomly does anything properly but marketing.

Try STinG as a networking package, which you can find on my web page (you
can find HSMODA07 there too). For the networking package that comes with
CAB you'll need multitasking, it won't work under normal TOS.

Doesn't this say all ?

In HTML, only text can be included into the main document file. Every bit
of graphics is another file to be retrieved via a separate connection.

Now that I have your attention, if you have not played Willie's Adventures for the Falcon 030 I suggest you download it immediately at http://www.kuai.se/~dhedberg/ . This game in a word is awesome. Awesome graphics, awesome sound, awesome gameplay. The company is called New Beat Development and I think it would maybe do them some good inspiration wise to hear from you and see some extra hits on their page. If you play the game and like it, e-mail the author and let him know you would be happy to buy the game when the finishing touches have all been made. If you guys are true Atari fans like I am, then it makes no sense to let possibly one of the last great games on the last computer ever made by Atari go unnoticed. I am calling all gamers out there who truly have Atari in their hearts, and former demo coders, hackers, etc. who appreciate good programming on the Falcon, to get off of your asses and show some support to these great game programmers!

By the way,I just e-mailed the author, Daniel Hedberg, and he told me that they have been a little burnt out but they feel the inspiration returning to complete this project hopefully within 4-6 months. You can e-mail him at dhedberg@algonet.se .

I am not affiliated in any way with these guys, just a game fan who wants to see more great games on the Falcon. -Satcom2

Ethical, why not? They are providing a valuable service of actually
distributing the shareware programs to end users. Is it ethical for the
phone company to charge people to get your phone number? People have
been selling free information for years in the form of reference books.
How much time and money would it take you to collect, categorize, and
catalog all of the Atari shareware available. What if you had to run
every program and comment on its value. It also costs money to make and
label disks as well as to distribute them to retailers. In the Atari
world there are thousands of shareware programs on different ftp
archives in many different countries. The CD archivers are doing a
valuable service for both the authors and the end users when they
simplify this.

>german !!

Yes!! Finally somebody who have the same experience as I have. Wonderful proggie, but for some reason HiSoft did never release Twist v.3. =:-((Maxon, on the other side did. The Amiga version of Twist is very popular and have a few more features than the Atari version which one can see at the Maxon homepages. I got my v.3 in 1995 and since then there have been no development on the Atari version to my knowledge. But I know the author, Hasse Wehner, talked about pulling up the Atari version after the Amiga version was ready. But, sorry to say, I doubt that he will do it just for a few interrested buyers so let's join to keep this wonderful DB alive!

Greetings, janne

What and where is Thing? Please tell me more.

1307. Still can't get a PPP connection with Sting

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: obroadway@cix.co.uk
Message-ID: <877834457.23470.2.nnrp-03.c2de4f5e@news.demon.co.uk>
Source record: 114735

It gets as far as "Initialising Link", then times out and tells me
"Initialisation failed".

Can't see anything in the configuration which might be causing this.

SLIP connections work fine.

Any thoughts or suggestions?

Ollie

1308. AVSERVER: English Docs? Instructions?

Newsgroup: comp.sys.atari.st

From: trax@cedep.com
Message-ID: <62uch5$1ka$1@wagner.videotron.net>
Source record: 114736

Hello anybody,

Being a user of CAB 2.0 / MagiC 4/ Newsie / QED etc..., I
believe AVSERVER is something that can be very useful to me. I have
the files and German docs. Can ANYONE please explain how to install
it? I can't make heads or tails of the German documentation.

ANY help would be greatly appreciated!

Stephen Angelini / trax@cedep.com / [1040STe/4megs/monochrome]

1309. Last Day: $24.99 each: Atari 1040 STf CPU or SC 1224 Monitor!!

Newsgroup: comp.sys.atari.st

For Auction: (Auctions end Monday at appx 9 pm Eastern time.)

Atari 1040 STf CPU with manual: $24.99 current bid.

Atari SC 1224 Color Monitor with RGB cable: $24.99 opening bid.

Both items are quite clean and work.

You can get more info and bid on these items at the following links:

CPU:
http://komodo.ebay2.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1259546

Monitor:
http://komodo.ebay2.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1259856

Or just jump to my web page which links you to my current auctions
(especially if your newsreader doesn't auto-link the above correctly)
http://rrnet.com/~bfrandse/auctions.html

Thanks for your interest. There will be no additional posts regarding
these two auctions.

Yes, you were probably in monochrome mode. Thhis mode only works on a
monochrome monitor. The machine boots in mono only if the pin 'mono
detect' is grounded. Leave it in the air to boot in color.

>
> My initial question of course is this...what other pins are required for a
> bare minimum composite connection? Do any of the syncs need to be

There is no composite output on a plain STF. If it was an STFM or STE it
would hhave an RF Antenna outpout for composite video.

>
> As for the RGB, I will continue to research that but wonder if you could
> offer some insights. I am very used to cranking out these types of cables

RGB is the only way to go, I'm afraid.

All the pinout information is available from a few links in my Quick
FAQ. There are also plans for an ST to NEC multisync adapter somewhhere
on the net.

hi satcom, no biggie.
Atari works just relies on a GDOS driver, NVDI actually or SPEEDOGDOS.
WHich obviously didn't install or installed the wrong way.
Text editor just don't use (in general) Speedo or NVDI. That's why.
You would actually have the same kind of message if ou were printing
or using software such as kandinski, papyrus etc.

Have a look at the sector size settings. I guess you didn't enter a
correct value for the largest possible sector there. A hard disk driver
always has to know the largest sector size when booting. If the value
entered in this dialog box is to small, larger sectors (on other
cartridges if they are inserted after booting) cannot be accessed. This
is a GEMDOS feature.

>are sure. The scanner is not terminated which I believe should be the case
>for a MegaSte. I know my Syquest as a second device off the Link II only
>works if termination is removed.

It sure sounds like a termination problem.
You should have the last unit in your SCSI-chain terminated and no other
units.
OK - in fact you should have the first and the last terminated, but since
the first one is the controller (which is always terminated) you only need
to bother with the last unit that's connected. The unit number has nothing
to do with it - just the order in which the units are chained together.
I've always followed this simple rule - both on Ataris, Amigas, PC's and
Mac's and that's why I've never experienced any SCSI-problems at all,
regardless on how many units have been connected.

Exactly the same here too: timeout on the 'Initializing link' message.
I've tried the 60 second timeout version of the dialer from Peter's
page, both with and without HSModem, several of my provider's numbers,
to no avail.

This is on a plain floppy driven 4Mb STE, TOS 2.05. No AUTOs except
HSModem and STinG.

It sounds like a general problem.

Yes I'm aware of the fact that they don't support Atari anymore. But ask them anyway if they've got anything left from the "old times". Maybe someone bought their Atari stock if they don't have anything left.

Seems to me you've cleaned away your Speedo fonts! Or the .INF file which tell
NVDI or Speedo where to look for them.
Install NVDI (preferable) or SpeedoGDOS again and your problems will be long
gone. (I hope, don't want you to get angry again, would I?)

CAB will not fit very well in 1Mb so use the STE.

>1. will CAB run ok with normal TOS or what do I need

Yes, you'll be OK.

>2. What speed modem should I get and what upgrades to the serial ports do i
>need to do if any

The STE serial port has a max speed of 19k2. You would be wasting
money putting anything faster than a 14k4 DCE modem on this.

There is a proprietary mod to the serial port (RSVE) which will raise
the speed to 38k4. You can also do a similar mod yourself which uses a
4040 chip and will cost a few pounds.

At 38k8 a 28k8 DCE modem is perfectly feasible.

Whatever you end up doing you will need to install the HSMODEM
software which straightens out software bugs in the TOS serial driver.
I guess CAB 2.5 contains this - if not it is readily available PD.

>3. I connect to the Net via MSN is there any limitation here with regards
>to connection via a PPP server?

Nope! ICONNECT as supplied with CAB 2.5 will be fine. Or you could use
STiNG which supports PPP connections.

Hi Katherine,
I couldn't find anything about this in my German manual and I've never seen this statement before. Where did you read it?
I know ASH like people to get the impression it's "MagiC only" but the fact is you need some kind of preemptive multitasking to get PPP-Connect to cooperate with CAB. I run it perfectly well under MiNT/N.AES although since the release of the new STinG package I prefere using STinG PPP which lets me use Newsie and AFTP which I could not under PPP-Connect.

Oh, luvverly!!!! The NEC 3D is THE recommended multisync for the ST -
wish I had one!

The NEC will support colour modes AND mono on the ST. The 1702 will
only be any good for colour.

I can't really see why you are not getting better results. Have you
looked in Hallvard's site. He has a load of FAQs concerned with
connecting "alien" monitors.

If I was you I would concentrate on the NEC. At some stage you will
need to stick a switch in to activate "mono detect" - the ST will not
go into mono mode unless it sees this signal.

Well, it appears that the latest STinG while providing more folks PPP compatibility, still fails with many ISPs. From what I've read here, some folks fail negotiation and others, like myself, appear to achieve a connection (reported so in the debug.log) but cannot resolve.

So, my question to Peter is, what can we, the users, do to help sort out these problems? I'm willing to do whatever I can, I just have no idea where to begin. Is there any way I can provide more insight or debug information into why the failures are occurring?

Thanks,

Pat

1333. "Atari A - Z" book hypertext file

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: msbaines@cix.compulink.co.uk
Message-ID: <EIo3xA.L4E@cix.compulink.co.uk>
Source record: 114761

Some of you, especially those in the UK, will know I produced a book - "The Atari A - Z, a dictionary of computing terms for the Atari computer enthusiast" a couple of years ago which went through several prints. All copies are sold out and I won't be doing another re-print.

For newbies not familiar with the book e-mail me for a description or ask here for a recommendation.

There have been many requests to release the text files on disk. I will not, under any circumstances, release ASCII or formatted text files.

However, I have considered converting the book into a ST-Guide hypertext file, but only if the user was prevented from turning the hypertext file into an ASCII file. Fortunately this facility is now available, I can encrypt the hypertext file preventing the user from decompiling it.

So, I am in a position to try to convert the book into a ST-Guide hypertext file (please don't ask for a HMTL file). To be honest, I'm not really sure if it's possible and how viable such a huge file will be. But, before I commit myself to this not inconsequential task, I need feedback from yourselves.

I am thinking of a release on floppy disk, each HYP file personalised with the buyer's details at the following costs which include postage:

UK: 8 UK Pounds
Europe: 9 UK Pounds
Elsewhere: 10 UK Pounds

Payment will be by cash, cheques (drawn on UK banks only), postal orders, Eurocheques, American Express Money Orders and Bank Drafts in UK POUNDS STERLING only. Cheques etc must be made out to "Mark S Baines".

Primarily, I want a commitment from those who want a copy of this disk. I'm looking for a minimum order of 50 before I will even start thinking about this. No work will commence until then.

I want firm, serious pledges. Make no mistake, if you promise now to buy a copy and don't pay up when it's available I will remind you *publicly* of your promise. I do not want the usual sorry tales of "sorry Mark, I'm short of funds this month" and "I'd like to buy a copy but...". I've had enough of that with the book and PROFILE 2 in the past. Firm, serious promises please!

Remember, this will take me many weeks to do properly, it's 2,238 entries, 101 tables and 128,000 words! If you want it, I'll try to do it. If not, I'll not lose any sleep over it, but I will be severely aggrieved if I have to chase people and find I've done this work for nothing!

Initially you can make your promise via e-mail. When and if I decide to do the conversion and it is available I will release a list in this newsgroup of those that have promised.

Reply via e-mail, fill in the name and date below, edit out the stuff above the line and send.

==========

"The Atari A - Z" ST-Guide Hypertext File

I like the idea of a ST-Guide hypertext version of "The Atari A - Z" book by

Mark S Baines. I understand that Mark has made no promise to produce such a file at any time in the future and understand that it may not be a viable proposition.

However, I promise to buy ____ (number of copies) of the said file and disk if it becomes available at the cost of ____ UK Pounds each.

Depends on whether you were really wanting to do a file copy or wanted
to back up an entire disk. When you drag a disk icon over another (eg
A to B) Magxdesk will do a file copy, with all that horrid disk
swapping. If you want to copy a disk in its entirety (which is what
the TOS desktop does when you drag icons) you need to select the disk
icon and use the Copy disk... command in Magxdesk's File menu. This is
more flexible than the TOS disk copy: click on the Options button in
the dialog.

>Yes, I don't think much of floppy support tbh.

Likewise. I don't really understand why it can't just read as many
files as possible into memory and then write them out again while
copying multiple files.

Again, true: VT52 could really do with an upgrade as it's beginning to
let the rest of MagiC down and look very dated. Not even the option to
iconify the window :-(

> w> So far seems pretty decent.
>
>Overall yes.

After a while you'll wonder how you lived without it!

This is interesting: I'd been thinking about Twist for a while so at
last April's Atari show I asked the man from HiSoft when Twist 3 was
coming out (as it had been pre-announced about a year ago or longer).
He said that at that time they couldn't even contact the author
(perhaps you could put them in touch with each other...). Anyway I
decided to wait but at the recent Birmingham show they were still
selling Twist 2, which I bought this time, and very nice it is too
(though the absence of GDOS output is irritating).

What would put me off buying a German version is that it doesn't have
a separate resource file (at least version 2 doesn't) so there isn't
much scope for translating menus etc yourself :-(

Count me in as someone who'd like to see an English version 3!

As a rider to what Katherine's said, as long as you have a version of
GDOS installed in your AUTO folder, try checking that paths in your
ASSIGN.SYS (all), EXTEND.SYS (Speedo) or NVDI.INF (NVDI) are pointing
to the right folders to find your drivers and fonts.

I've heard both versions of the fuzz between HiSoft and the author by the time HiSoft would have released v. 3 but that's nothing I intend to discuss here. Are HiSoft still supporting the Atari-market or just selling off their stock?

>selling Twist 2, which I bought this time, and very nice it is too
>(though the absence of GDOS output is irritating).

Which, AFAIK, is the main difference. There are some things to improve in Twist 3 and then it would be a perfect DB. Simple to use and with heavy features. But... Twist 3 for AMIGA is loaded with new features. Maybe Amiga users are seriously working with their computers and not, as i believed, only played with them. 8-)

>http://www.kuai.se/~dhedberg/ . This game in a word is awesome. Awesome
>graphics, awesome sound, awesome gameplay. The company is called New Beat

Yep.. the game has been in development for hmm how long?... I saw a
demo last year.... very nice.. probably the most impressive thing I
have seen on the falcon yet,
Looks to be just like "Rayman" on the PC and Jaguar...hope thats not
some sort of insult.. its not meant to be?

I got the impresion this was like Bad Mood, Donkey Island and all the
other games that get talked about for year after year.. but never
released..

Like I say.. the most impressive thing I ever saw on a Falcon.. lets
hope it gets released sometime.. it WILL take the games scene by storm
:)

>calling all gamers out there who truly have Atari in their hearts, and
>former demo coders, hackers, etc. who appreciate good programming on the

whats a hacker ?, and who "former" demo coders and not current ?...
hehe just laffin :)

1342. CAB v2 Demo - Problem with long URLs

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: Michael Saeger <wanda@xnet.com>
Message-ID: <Pine.SOL.3.95.971026150826.12845B-100000@typhoon>
Source record: 114770

I just installed a search engine on our company's Web site from Verity.
It runs fine on MS-Internet Explorer and Netscape. But it won't run
right on Cab because CAB returns too short a URL string. Does the
production of CAB v2 have this problem? What is the maximum limit of
a Cab URL string?

1343. newsie 82 attachments

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: andrew.styrmo@bbs.trideja.com
Message-ID: <877900367@bbs.trideja.com>
Source record: 114771

Before I attack the latest version let me praise it! I'm having much
better success with newsie 82 than ver. 80.

The problem I am having is with the feature I have been waiting for,
file attachments. I have had no luck with sending or receiving file
attachments as of yet. Has anyone been able to do either?

As for receiving attachments, a friend sent me a program attached to
an e-mail. Using Newsie, it just tagged the file right into the
e-mail message, the program had been converted into ascii.

Example:

(snip)
Message-ID: <Pine.BSI.3.95.971022132226.24870A-101000@infomatch.com>
MIME-Version: 1.0
Content-Type: MULTIPART/MIXED;
BOUNDARY="-1730992165-795550534-877551925=:24870"
Status: RO

This message is in MIME format. The first part should be readable
text,
while the remaining parts are likely unreadable without MIME-aware
tools.
Send mail to mime@docserver.cac.washington.edu for more info.

---1730992165-795550534-877551925=:24870
Content-Type: TEXT/PLAIN; charset=US-ASCII

(message snipped)

---1730992165-795550534-877551925=:24870
Content-Type: APPLICATION/zip; name="(snip)"
Content-Transfer-Encoding: BASE64
Content-ID: <Pine.BSI.3.95.971022132525.24870B@infomatch.com>
Content-Description:

UEsDBBQAAAAIAABKHh29Wp+N0b0AAOxlAQAYAAAAWEJPT1QzMTAvWEJPT1Qv
WEJPT1QuUFJHrL0LfFRVmi+6dtVOURZlLIsypNPpUJYxnQ4xKcsQyxhDVeVB
JUASK+Ghh8EtQ1fRkEd1dcwgk8sERBuR8USGcRjH6/F4/Tm049gM7dA2h+FE
QIamHSamaWC4HJthUDAgcmjaQcXU/X/f2ntXBbB75vwu/FJ77bXX+/Gtb32v
(ad nauseum)

This is no different than what Antmail does when confronted with
attached files. Is there such a thing as a base64 converter that
would
deal with the ascii-ized file much in the same way UU programs do?

Where can I find a base64 converter if it exists? Umich?

Using pine on my isp (done with Freeze Dried) it clearly showed
it as an attached file which I saved to my file folder then z-modem
downloaded.

My experiments with sending attached files with newsie 82 haven't
been
any better :^(I tried sending myself an attached small prg. with
the
encoding set at "none". It didn't send the program with the e-mail.
The prg was 800bytes but the e-mail sent was only 250bytes. This is
what appeared in the message:

(snip)
Subject: test
X-Mailer: NEWSie Version 0.82 (Atari)
X-Sender: POPwatch v2.10
Status:

`.mory to add folders.
lb@`3 H@  <Hit any key to exit...

(yes I know that the popwatch version isn't the latest, I just
haven't
installed 2.3 yet, I could be wrong but I don't think that is where
my
problems are in this matter).

Any ideas? Any lucky people able to attach files? Any other confused
users?

1344. Another Satisfied STiNG 1.08 user

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3453bd58.0@nemo.idirect.com>
Source record: 114772

well, I finally decided to take the plunge this afternoon with the new STiNG package (1.08) to see if I could get a PPP connection with my ISP Internet Direct and my Falcon - and suffice it to say, IT WORKS! And beautifully, too - once I had all the basic dialup info, I was able to dial in and log on perfectly - linked up properly and got my IP Address with no hassles. AAMOF, I'm currently writing this missive via a PPP connection and NEWsie right now.

I DID initially have a problem getting CAB 2 to go to web pages with the "resolving host" problem mentioned by a few people here; however, I went into my DEFAULT.CFG and noticed that there were a few pertinent pieces of information left off or missing from it (like my nameserver number and domain name), as well as noticing some proxy addressing for CAB. I just filled in all the necessary blanks, and HEY PRESTO, CAB works!

Peter, THANK YOU for perservering with STiNG and ironing out all the bugs in it all summer. With luck, the entire membership of TAF should now be able to choose an ISP of their choice (rather than be limited to sticking to SLIP-only ones). I'm also going to be doing a demo of Internet stuff for Atari at Songbird Music on November 15th, and STiNG will definitely be one of the applications on display. Again, thanks!

1345. STing works well, but...

Newsgroup: comp.sys.atari.st
Date: 1997-10-26 00:00:00 UTC
From: Nima Montaser <nima@nortel.ca>
Message-ID: <3453BBAD.10D@nortel.ca>
Source record: 114773

Hi,
I got STing to run smoothly on Modem2 of my TT. I ran CAB 1.5,
NEWsie, couple of Telnet packages and everything worked great.

Then, I started thinking, well, I would like to use my highspeed
lines of my TT with my modem, so I switched to Serial2 of my TT and
using the serialport cpx, I selected the highest speed, 115200.
However, upon saving, I get the following weird stuff:

1- If I try to go back to the serial cpx, it crashes the control panel.
2- If I keep STING.CPX running, the dialer nor any other terminal
package works because every few seconds, the SD/RD on my modem goes off
and sends/receives garbage

Any ideas why such behavious happens?

Thanks again Peter and everybody else in credits list.

Nima

Yes.. I have had the same problem. I am always getting their PC
newsletters and I only signed up for the Atari related ones. I am sick
of their shit. Toad sucks and we must take them down.
The totally dropped atari to become an ISP. What really makes me angry
is that I sent them a letter asking why they field all their calls to
other atari related places and why they don't serve atari users anymore.
They said they field sometimes hundreds of calls a week to other atari
companies. I am sitting there thinking. WHY DON'T THEY SERVE THEM
THEMSELVES.. duhhH! Toad is going to get an earful from me one day.

I have just recently become interested in Atari computers
and would like to purchase just about any 16-bit setup
(1040 to MegaST) to get started.

I'd like to be able to check the system out before purchasing,
hence noting that I'm in the Cleveland, Ohio area.

Software is not important, but it would be nice to also get
some sort of terminal (communications) program with it.

Thanks,
Eric Weimer.

But, surely, you can't use "None". A binary will contain characters
which will confuse text mailers.

This sounds to me as if you don't know what your username or your password
are!
POPwatch will *only* ask you for a password if you haven't set one up in
it's user preferences (so you can't have done). It also seems that you don't
know what your POP3 username is meant to be. You need to contact your ISP
and *ask them* what your username and password ought to be.
The fact that you are trying different things really does imply that you
don't know what the correct settings are. Please contact your ISP, then try
it again.

Open the 'STinG Protocols' CPX and check out the Resolver page. Does it have the
'Save Cache' option checked ?

Go to the Dialer's Resolve Tool. Enter a valid domain name, and allow for a
few seconds. What's the result ? If it does not give you the IP address, try
to enter "[CNAME] bolt.demon.uk = 192.168.1.1 : 10000" (no typos please).
What happens now ?

Actually, generally you're better off when configuring the modem to report
the phone line speed, rather than the host line speed, some comms programs
prefer to know the phone line speed.

But I guess it doesn't really matter.

>
> I'm not confusing anything. Someone seemed to claim that the limit is
> 14400. I pointed out that it's 19200. It is, isn't it?

It is, but by comparing the 19200 bps to the other guy's mentioning of
14400 bps (which obviously was the phone line speed) you clearly implied
you were talking about the 19200 bps as being the maximum phone line speed
that can be used with Ataris. Your question 'Why not 19200?' even empha-
sizes it, as it would be pointless because certainly the other guy uses
that speed too for the host connection.

> I'm fully aware that my K56 flex modem can't run at it's wonderful max
> speed with my Atari. But at least I have gone from 14400 to 19200 (and I
> got it cheap).

Ok, then you probably referred to the minimum of phone line speed and host
line speed, which was not at all obvious from your original reply, and which
is not even very meaningful. Due to compression done by V42.bis, even a
14400 bps modem is capable to give you 19200 bps easily if the circumstances
are not too bad.

So if you wanna compare effective speeds, you should note that you improved
from maybe 18000 bps (average speed) to 19200 bps, which is neither impressive
nor implied by your original reply.

> Now perhaps I can start thinking about that hardware

Do so, as without it the improvement is poor.

We have distributed the German version of Twist Atari. Unfortunately we have
completely given up the distribution of Atari software and therefore cannot
sell you an update anymore, sorry.
Anyway, if you own the English version of Twist we couldn't help you anyway.
The English distributor is HiSoft Systems in the UK. You can contact them at
info@hisoft.co.uk (www.hisoft.co.uk), maybe they can help you with this update.

While FORECAST isn't a complex program, it's always worked just fine with any version of STiK I've tried,
up through 1.12 (I think that's still the latest official release). It would be nice if someone would
update/improve it, since I find it a neat little utility (although mostly of interest to US users).

Of course we read, silly!

I can't speak as an expert for your specific problem, but basic computer care says never connect or disconnect a cable while the device at either end is turned on. But on the bright side, I would think it more likely to blow your video than cause your boot up problem.

Tis 0.82 :-)

You can get it from John's website (URL in docs) or from the AIBS pages on Zetnet, or I guess I could do a binmail or ful to you via CiX.

Let me know.

>and were to get it.

The cheapest DTP program I know about for the Atari was Easy Text which came in both normal and Pro versions. The Pro Vector version supported Speedo fonts in its initial release, and a later version included True Type support as well.

A few UK Atari dealers still sell Easy Text Pro, and issue 7 of Atari Computing magazine has about three adverts with people selling second hand versions of the program (including me!). You're in Germany, so it may not be so easy to purchase this program for you, but you never know!

Also if you're happy with just ordinary GDOS font support. Timeworks DTP was given away on various magazine cover disks in the past few years!

What you can do : Download the new MODULE.LZH from my web page, replace
the old SERIAL.STX with the one from the package, and see if it works.

Cheers Peter

>
> Anyone with some ASH manuals confirming that they say such crap?

Haven't got them. Actually if Kay Roemer (MiNTnet author) would run an
enterprise, he could suit ASH, as german law forbids negative advertise-
ments like that (I know it's normal in the US).

Unfortunately, since Kay does not make money with MiNTnet, ASH are allowed
to do this. As you can see they promote their own crap (Iconnect cannot
do SLIP, only works with multitasking, it's proprietary, and nobody really
knows the API, etc.) quite aggressively.

Ya know the world is bad ... ;-)

Cheers Peter

PS.: Iconnect is nothing else but so-called PPP-Connect that comes with
(commercial) CAB V2.5, for those who didn't know.

Not really. Note I can use STinG with 115 kbps very well even on a Mega STE
which is a much slower machine.

If this problem crops up only after you got a PPP connection, you should
try the bugfix SERIAL.STX, which is in MODULE.LZH on my web page since
today.

1372. New SERIAL.STX for STinG

Newsgroup: comp.sys.atari.st
Date: 1997-10-27 00:00:00 UTC
From: perot@suse.modem.stud.uni-hannover.de
Message-ID: <EIpMC3.12K@suse.modem.stud.uni-hannover.de>
Source record: 114600
Cross-posted to: maus.sys.atari.internet,maus.sys.atari.software,comp.sys.atari.st

Deutsch siehe unten.

I've uploaded a bugfix version of SERIAL.STX for STinG onto my web page. Find it in MODULE.LZH. The bugfix is aimed primarily to eliminate the two following problems :
- For some people the login would work just fine, but afterwards they could not do any Internet data traffic (Ping, WWW, etc). Most of these people will find this SERIAL.STX fixes their trouble.
- Some other people have crashes during or straight after login. It appears to be the Dialer which bombs, but is in fact the SERIAL.STX. This one should fix that.
Some people simply have trouble getting a login, they have the Dialer saying "Initialisation failed". The bugfix version might cure that too, but I'm not to optimistic. Might be worth a try anyway I guess. I do have an idea what could cause this, so there might be another version in one or two weeks I think. Kerstin Hoef-Emden reported the program header flags of STING.PRG and DIALER.APP should be configured to not allow those to use Fast-Memory ("TT-RAM", alternate memory). I'm investigating that.

Eine neue Bugfix Version des SERIAL.STX kann von meiner Webpage gezogen werden. Sie ist im Komponentenpaket MODULE.LZH zu finden. Sie richtet sich hauptsaechlich an Leute mit den folgenden Problemen :
- Einige Leute berichteten, Ping und Resolve, sowie andere Sachen wuerden nicht laufen. In den meisten Faellen wird dieses SERIAL.STX das Problem loesen.
- Andere konnten nicht einmal einen Login mit PPP erreichen, sondern sahen einen Absturz waehrend oder nach dem Login. Die neue Version sollte dies in allen Faellen bereinigen.
Bei manchen Leuten war bisher kein Login zu erreichen, sie erhielten nur die Mitteilung "Initialisation failed" vom Dialer. Ich bezweifle, dass diese Bugfix-Version dieses Problem loest, aber ein Versuch kann nicht schaden. Ich habe eine Idee, woran es liegen *koennte*, wenn es sich bestaetigt und ich es beseitigt habe, gibt es demnaechst eine weitere Bugfix-version. Kerstin Hoef-Emden berichtete, sowohl STING.PRG als auch DIALER.APP sollten die Programm-Flags so konfiguriert bekommen, dass sie kein Fast-Memory ("TT-RAM", Alternate RAM) benutzen. I untersuche dies noch.

Cheers Peter

It's an old (1987) program written by Simon Poole that can do repair jobs on
the FATs, undelete files (manual or automatic) and a bit of disc editing.
The program's fairly basic, but for a 10 year old program, it does okay.

If you wan't to have a look at it, I can email it if you want.

Hi, Dan, I hope you don't mind this intrusion. A pal o' mine has a TT with
4&4 and has been after me to GET HIM CONNECTED. Is is true you
have to send to UK for Cab 2.5 ? Does it require Mint?

He has Geneva & Neodesk 4. I was going to try it on my Mega 4 but I
keep hearing about Mint and I seem to shove it aside till later. It would
be nice to try it ot since (obviously) I have a compatible ISP.

I understand I need Sting, Cab, HSmodem for Tos 1.04. Do I need Mint?

>it again.
>
>Gary

Thank you for the "advice" Gary, but its not helpful. Sorry. I tried the
different "settings" because the obvious did not work. I'm not slighting
you or your program, but entering the password part is rather a "no brainer"
and I'm rather beyond that... <grin>

Thank you for your input once again...

This sounds like you've set an illegal boot-up video mode in your NVRAM.
Use one of the many NVRAM configuration programs (e.g. Bootconf by Uwe
Seimet) to set your Falcon to boot in ST high or ST medium. But note that
in any resolution with less than 400 pixels, the memory test will be
written into the Atari logo, as the logo always keeps the same height,
independent of the current resolution.

Ciao

Thomas

You have always received attachments!

This IS the attached file, and it IS base64 encoded, and it is NO different in 0.82 than at any other time in history. Click on the 'Extract Binaries' menu/toolbar, and the complementary version of MUNPACK.TTP will unpack the above ASCII text into a binary file. I think that "(snip)" might be an invaild filename, and that could be causing you some problems.

The only changes in 0.82 is the ability to encode UUE or base64 within NEWSie, without needing an external program (like UUE or MPACK).

Setting the encoding to NONE should only be done if you are sending
an ASCII text file. NONE means "do not encode, the file is already
in ASCII ready to transmit". Use UUE for UUEncoding, or MIME for
MIME encoding.

Attempting to sent none ASCII text with encoding NONE will NOT work.
(It has nothing to do with NEWSie, its the mail transfer protocol.)

I hope this helps.

I have a Mega ST2 (upgraded to 4 megs) that I would like to sell.
I am asking $100 plus shipping. If you live in the San Francisco,
California area we might be able to work something out.

The system includes:

SM 124 monochrome monitor
50 MB Hard Drive
Golden Image Hand Scanner w/Touch-Up 1.5
Video Key (Allows you to connect a TV to the Mega ST)

Also included is the following Software:

Calamus SL
1st Word Plus 3.14
STraight Fax v2.2
Outline Art v1.0
Diamond Back II
Diamond Edge
Silhouette

I think you will find this a pretty good deal. I am selling this as a
package
only.

If interested please reply here or Email me at sramirez@best.com

Later,
Sam

Do you boot in monochrome? My Falcon has problems with switching to monochrome,
with symptoms similar to those that you describe. Use Bootconf or a similar
NV-RAM config-tool and try booting in 16 colours.

I had about 8 issues left on my subscription but haven't received an issue in about a year (maybe longer). I really haven't pursued the matter since I'm pretty much out of the atari world except for trying to sell my Mega ST2. It's too bad that STI is gone, though I really do admire Rod Mac Donald for staying in as long as he did. I met him on several occasions and each time I told him that I was probably going to go via the Intel route, he got on the pulpit and preached the gospel of the ST. Oh well, good luck with your refund.

Make sure your monitor are ready to display Atari RGB-Mode with 15Khz!
Your description says: no

>the same happens, plus there are vertical parallel black lines on the
>extreme right side of the screen. This happens on my TV and monbitor both. I
>tried opening up my Falcon and pushing any loose socketed chips in,

Witch chip? It's all in SMD. (ROM, FPU) ?

>disconnecting the IDE drive in case it was a virus...but always the same new
>error. Did I possibly "fry" something just a little while experimenting with
>a half plugged in monitor cord? Or is this perhaps some sort of random

A half plugged cord is a chance to blast the video system.

The next BIG chance to destroy your monitor / falcon is to ignore the scheme
of both monitor id wires. Pin 18 V1 (M1) and Pin 18(V2 (M0)

Only with a correct wireing of Pin 18/19 your Falcon detects the right Videomode!
(And can display that mode in the right form!)

DOITF030 HTML V 5.8

Monitor ID-Bit (Pin 18/19) Frequency Hor. Vertical

ST-Mono (SM124) 0 0 71Hz 35Khz !!
VGA 1 0 60Hz 31Khz
RGB (SM1224) 0 1 50Hz 15Khz !!
Genlock Mode 1 1 50Hz 15Khz !!

>bit-rot in my TOS chip? Everything else seems to run fine, once the desktop
>comes up, it is just in the initial TOS startup sequence that I notice this
>anomoly, and it happens every time I boot up. I have seen weird things like
>this happen, then go back to normal not to be seen again, my old STe for

>on to avoid bomb errors every few days, but this Falcon thinfg bothers me
>because I am now afraid to do my monitor "trick", also I am afraid that it
>might not be the trick at all but a computer about to go bad. Let me know
>what you think, if anyone is actually reading this! :) -Satcom2

The one and only (easy) chance is to reinitzalise the internal NVRAM. (BOOTKONF.PRG)

1. If that not work, connect a SM 124 (with the RIGHT monitor adaptor) and try again.
2. After that, reconnect your RGB Monitor (with the R I G H T adaptor) and try agin.
3. If that will not work, congratulations, you blast your video system while
connecting a monitor in a wrong videomode. Sorry.
4. Check videosystem with atari testkit.

If that will all not work, check U42, a simple 74LS244 in SMD.
V0 = Pin 15 of 74LS244
V1 = Pin 17 of 74LS244
(High/Low as shown in the list upper)
(U42 = left side mainboard, nearly expansions port)

While connecting a monitor from the list upper you must find the id bits
in the same schema as shown upper(Pin 18/18) on Pin 15 / 17 (U42)
That's OK, but the machine doesen't work well?
Remove U42, try agin with a new chip

Try again point 2

That doesn't work well ?

Remove COMBEL, VIDEL, and some more (expensive) active parts
(But that's another long long story..)

In the latest 2.5b version of CAB you have a maximum limit of 195
characters for typing an URL ... enough for any common URL :)

Thanks for the info.I'm still not able to connect though.
STing works right up to the point of 'Initialisation' then the timer
counts down to about 27 and I hear the modem disconnect.The message
'Initialisation Failed' appears.Thats all I can get.
I hope Peter was able to get my DEBUG.LOG off a previous posting.
I wuold really like to get STing up and running,it looks like
a great program!!

1391. Atariworks labels help

Newsgroup: comp.sys.atari.st
Date: 1997-10-27 00:00:00 UTC
From: cjohns@yplace.demon.co.uk
Message-ID: <877910824_OASIS_@yplace.demon.co.uk>
Source record: 114665

Using Atariworks to print labels, does anyone know if it's possible to suppress empty fields? Some addresses obviously have more lines than others, and gaps are left on the labels if a field is empty for a particular address. Superbase automatically closes up the empty fields... but no vector fonts of course. My Aworks version is 1.207, the latest (only!)I think. Has anyone found a workaround, or even another program that will do the job?

Many thanks

Chris Johns

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 10/27/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 5.00 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 4.00 California Games (Epyx)
$ 4.00 Championship Wrestling (Epyx)
$ 4.00 Death Sword (Epyx)
$ 3.00 Devon Aire (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 3.00 Final Assault (Epyx)
$ 4.00 GFL Football (Gamestar)
$ 3.00 Lands of Havoc (Antic Software)
$ 4.00 Man Hunter: New York (Sierra)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 4.00 Metro Cross (U.S. Gold / Epyx)
$ 4.00 Paint Pro (Abacus Software)
$ 3.00 Prime Time (First Row)
$ 4.00 Quadralien (Spinnaker)
$ 4.00 Renegade (Taito)
$ 4.00 Space Quest: Chapter I (Sierra)
$ 3.50 Stunt Track Racer (Microplay)
$ 3.00 SwiftaR (Accustar)
$ 4.00 Techno Cop (U.S. Gold / Epyx)

$ 5.00 Warship (Strategic Simulations, Inc.)
$ 4.00 Winter Games (Epyx)
$ 4.00 World Games (Epyx)
$ 4.00 World Karate Championship (Epyx)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

You have to install a DOS compatible partition on the cartridge. With a
hard disk driver like HDDRIVER the Atari can read and write DOS
compatible partitions. Note, however, that DOS compatible partitions >
32 MByte only work when either MagiC or Big-DOS (included in the
HDDRIVER distribution) is installed on the Atari. The demo version of
HDDRIVER you find on
http://acp5.chemie.uni-kl.de/seimet/hddriver_german.html.

I exchange data between my TT and a PC running Windows NT this way,
using a SyQuest SQ3270 drive.

If that's right (they say that), my feeling is that it's an internal German-German war between the two authors, or that iconnect' author didn't have success in MintNet to work...

Hi!

In article <344ea1be.78719640@news.snip.net>,
mhop@snip.net (mhop) writes:
>>Btw, Thing 1.09 automagically filters these additional entries, so you
>>won't see them in the directories display by Thing.
> What and where is Thing? Please tell me more.
Thing is an alternative shareware desktop for use with SingleTOS, MultiTOS,
N.AES, Geneva, MagiC, etc. It has useful features like auto-locator in
windows (begin to type a filename and it gets selected), support for
alternative filesystems, file groups, extensive application options, and
a lot more.

You can get the latest English version (1.09E) from
ftp:///pub/atari/interactive/THNG109E.ZIP, but the new version 1.20,
which has improved a lot, will be released this week, though at first,
there'll only be the German version.

Ciao

> a floppy, WITHOUT INSTALLING MAGIC?
Did Uwe say anything about using long filenames? What he wanted to say is
that it's not true that GEMDOS interprets the special VFAT directory
entries as free, as Jo had said. And the subject of this thread is about
whether Windows 95 renders TOS disks unuseable, which is not true. It's
not about using the long filenames of VFAT entries without MagiC 5 or
additional software.

Ciao

> Can anyone help?
The drive you mention is actually an IBM DPES-31080 OEM. Unfortunately,
you did not write what system you're using. Anyway, it's worth a try to
disable "send unit attention" by setting jumper 5, which helped me with
my Falcon, although this machine should normally not be influenced by
"unit attention" ...

Also note again, that it's NOT necessary to format modern harddisks
unless you have bad sectors on it. Just buy it, connect it to the ATARI
and go right to the partitioning.

First - there are at least two North American dealers - Systems
For Tomorrow and chro_Magic Innovations - who are official dealers for
CAB. Matter of fact, chro_Magic sent me e-mail saying they expect CAB
2.5 in a week, so I've sent off my copy of CAB 2 to them for the
upgrade. Call Jim Collins at 1-417-623-7392, or his order line at
1-888-660-4041, or email him at jimcollins@delphi.com .

As for MiNT - no, it's not necessary. You need a proper TCP/IP
socket like STiK or STinG or the PPP-Socket included with CAB 2.5.
You'll also need some sort of multitasking system installed to make the
best use of everything - MagiC, Geneva, or MultiTOS (the PPP socket
purportedly requires MagiC to work, but I'd like to try it out first
before I make any blanket statements on that). Also note that the other
STiK suite programs currently (NEWsie, POPwatch) that don't support PPP
Socket.

I don't care about internal wars, it's just a lie.
Not having success setting it up doesn't mean anything.
MintNET DOES PPP since quite a while now, and too many people are
actually running it to say so too.

That was just a guess, as I pointed out in my posting. If anybody has an
explanation I would be very happy to hear it.

> whether Windows 95 renders TOS disks unuseable, which is not true. It's

Windows95 trashes DOS/TOS disks. Period. It does it all the time here, so
there is definelately a problem. If I use the same disk on both my Falcon
and a Win95-box, the disk is definelately unreadable after a while.

I also has to exchange data with Macs from time to time, and they suffer
from the same problem: Disks written to by Win95 is unreadable after a
few swaps.

It might help to leave the disks on the table for a while. (?!)

I once brough a couple of disks to a Mac-friend. They were nicely DOS-formated and all, but coming from my Atari. I've had problems before so I brought like four copies of every disk. We shoved them in the Mac, but no luck. Disk unreadable! We tried Norton Disk Doctor. It hum-hum-ed for quite some time doing its thing but it was no use. All the disks remained completely unreadable. :-(But a week later my friend found the disks still on his table. He for some reason shoved one of them in the drive again. Lo and behold! Suddenly all of the disks were perfectly readable! No problem at all. Perhaps the Norton medication needs some time before the patient recovers. Or it could be sunspots, or the vibrational coefficient of the Universe...

I don't know why not.. It was a question :) and if you read all the
question you will also read the answer to your "Why not"

>distributing the shareware programs to end users. Is it ethical for the
>phone company to charge people to get your phone number? People have

Good grief it was only a question.. and there was a reason for
asking..

>been selling free information for years in the form of reference books.
>How much time and money would it take you to collect, categorize, and
>catalog all of the Atari shareware available. What if you had to run

eeerm hang on.. they copy an ftp archive and dump it on a CD.. I
doubt they go to all that much trouble..

>every program and comment on its value. It also costs money to make and
>label disks as well as to distribute them to retailers. In the Atari

Yes.. but 29.99, 39.99 or whatever ????

>world there are thousands of shareware programs on different ftp
>archives in many different countries. The CD archivers are doing a
>valuable service for both the authors and the end users when they
>simplify this.

Are they ?......I strive endlessly to make sure all the software I
produce is FREE... now lets suppose someone makes a CD and makes a
profit out of that CD... they are then making a profit out of my
work... and I want my stuff to be FREE...Hence my question :)

Sorry but I cannot seriously imagine in the current climate that
someone is going to go to all the trouble you just listed.. just for
the fun of it and with no profit?, I make the software for no profit
so why should someone who bangs it on a CD make money ??????

I have 28 seperate PD/Freeware titles out there, AND have made 25 seperate freeware diskzines, I have also made diskzine shells for 8 other different Diskzines, some that have needed lots of different shells..Thats about 70+ seperate programs I have released, FREE, I dont want to see anyone else making money out of all that now do I? Years of work for someone with a CD writer to come along and make money out of it?..... no fanx!

BTW I am not and have not accused anyone of doing the above.. Thats why I wanted some CD listings.. to see <smile>

.

When you do "E-mail" , "Post" or "Followup" Newsie presents a dialogue with To, Subject, CC etc.

You would usually select the "Edit" button to prepare the message.

If you want to attach a file click on the encoding you want (UUE. Mime) then click on the Attach File box when you will get a file selector. Use this to register the file you want to send.

Then click on "Edit". You will be presented with the message file by your editor which will have had the encoded file inserted. Proceed as usual :-)

Who cares? It works just fine and I see no slowdown, atleast not on
a AB040. It's fast enough for my needs and works just fine. If there
only could be some more XFS done for MagiC handling other nice stuff
like
Minix etc. No one working on it?

> This does not mean you shouldn't give it a try, of course ;)

Not?

BTW. It's you who is in charge of Thing now, isn't it? Any plans on
putting
up a webpage amd some info on the "new" Thing?

Hi folks!

I want to reinstall so I can make another try for the bable fish, but I lost my disks.

Send me a note if you have this game for PC, Mac or Atari ST and would like to sell.

Tom Gimon

Ok Perot :)
Got the latest fix from your page. Exact same thing, not better not
worse :)
Cslip works very well still, but PPP just doesn't want to resolve
anything NOR ping.
I noticed that as soon s I try to resolve with cslip, the harddrive
starts directly then the modem flickers.
On PPP, the resolve doesn't do ANYTHING, no flickers, no harddrive
activity.
That's all I can say so far :)
Perot the ghostbuster :) Bugbuster :)
Keep it up :)

I don't know exactly what you want to do with the manuals, but if they
are like my ST's one, they are not much help.

Maybe if you are looking for an answer to a particular question, it
would be best to ask here instead.

1417. Comm Program Wanted

Newsgroup: comp.sys.atari.st
Date: 1997-10-28 00:00:00 UTC
From: megcolard@aol.com
Message-ID: <19971028192401.OAA06003@ladder01.news.aol.com>
Source record: 114491

I am in search of a comm program to null modem a 1040STF to a mac or as a modem hookup on the 1040. I have a 1040 with no software would like to get some MIDI apps running on it. I would be willing to send a disk, or pay for disk to get this computer off it's island.

I would also be interested in info on importing atari formatted disks on other platforms (MACorPC) in order to get some software on the computer. GEM is nice but doesn't do much on it's own...

Response via mail here or kesava@vllyoak.resun.com

Much thanks.

This is so cool. I appreciate that you're going to do this!

I run HDDRIVER 5.10, with the CAFFIX program in the auto folder that is suppossed to fix any offline problems (I haven't really tested to see whether having it or not having it makes a difference).

-I have a Seagate Hawk 32151N, 2.1 gig hard drive.. 5400 RPM. Works great for eight track playback.. flawlessly. I haven't been able to use ADATREC.PRG to record 8 tracks simultaneously with any consistency, however. It seems to work fine for the first four to five minutes, but then the "HD too slow" message rears its ugly head. I haven't tried timestretch, but have used other offline functions like stereo to mono, sample rate convert, etc with success.

-I also have an older Toshiba drive (I'll have to check the model number at home) that is slower then the Seagate, but I can manage 8 track playback on it fine. I haven't tried ADATREC to record more then 2 tracks, however. Offline functions have always worked for me on this drive too.

-I have a jaz drive that I haven't tried to record or playback from (I've just used it as a pre-archive place to hold stuff). I would be willing to give it a run for the sake of this testing if you don't receive details from someone else.

-Mark

1420. PPP-Connect/Geneva/MiNT probs

From: Martin.Byttebier@ping.be
Message-ID: <878071356_OASIS_@ping.be>
Source record: 114494

Some day ago after reading the treads about ppp-connect I decided to
give ppp-connect another try.

I got it working now with N.AES/MinT but with Geneva/MinT it's still
impossible.

Although HSMODA is loaded ICONF.PRG complaints that it can't find the
RSVF-cookie. I played around with the starting order of the Autoprg's
(MiNT before HSMODA, MiNT after HSMODA etc.) but nothing helps.

I begin to think that one can't use ppp-connect with Geneva/MiNT

Anyone out here who had more luck.

>well as pick up mail, news and files.

Well, that's hardly suprising! STiK client such as NEWsie,aFTP,POPwatch,
NEWSwatch etc. are just that, 'STiK' clients. STiK and PPP-Connect are not
compatible TCP/IP stacks!!!

If you want a wide range of clients you have to use STiK/STiNG/GlueSTiK. If
you just want web browsing then fine, use PPP-Connect. But that's *all* you
can do with it!

I have been after programming docs for PPP-Connect for ages, but can I get
hold of them? No I Can't!!
I'd love to make POPwatch etc. compatible, but I guess ASH (in all their
wisdom) are keeping programming docs a secret. Thus I think PPP-Connect is
doomed on the Atari! ASH should be trying to sell it by releasing
programming docs etc. *All* internet clients on the Atari *are*
freeware/shareware with the exception of CAB2. Says it all really.

>Now yesterday I played around with old CAB 1.5 and STinG just for fun.
>It worked OK together with both N.AES and Geneva (even with NeoDesk :-)) I used

>other.

AFAIK, PPP-Connect (let's call it that 'cos I think it's its proper name),
only works under a pre-emptive multitasking system (which Geneva isn't).
This is covered within other threads in this newsgroup.

When using the term "PPP Socket" (which is a no-word), he was referring
to the TCP/IP stack "PPP-Connect" which has neither mail nor news clients
yet.

Of course you can use Newsie or FireNews/Babel very well with STinG on a
PPP connection, or Newsie or POPwatch or Antmail for mail.

There is a very good RAMDISK for MagiC 5. It's an XFS thing so it
supports
long filenames and only takes up as much RAM as it need. If there are no
files in it it takes up no RAM. It expands as it need to. Very nice.

Hi!

In article <633dh4$r93@usenet.pa.dec.com>,
wongck@letterbox.com (William Wong) writes:
> I copied some files for my Win95 & Falcon on to a floppy using Win NT. Win NT
> writes pure FAT to floppy (with LFN), not that VFAT32 stuff which Win95 uses
> (BTW, VFAT32 is incompatible with Win NT).
Erm, don't mix FAT32 and VFAT here. FAT32 is an incompatible extension to
the FAT filesystem for harddisks which first appeared in Windows95 OSR2;
it is not used and not intented to be used on floppy disks, as the minimum
cluster size officially supported by FAT32 is 4K, which would be a waste,
as (V)FAT uses 512-byte clusters on HD floppy disks. If you used FAT32 on
disks, you'd only have about 354 clusters for your data, each cluster
eating 4K, compared to (V)FAT, where you have 2847 clusters, each of which
has only 512 bytes.

Windows NT 4 does use VFAT on disks (otherwise it couldn't store the long
filenames in a DOS-compatible manner), but as said before, VFAT is not
FAT32. VFAT32 is simply FAT32 using the same methods to store the long
filenames as VFAT does, but as said before, is only used on harddisks.

Ciao

Thanks. But don't forget to mention the drawbacks as well. Due to its
dynamic nature (files are organised as linked lists of 4K-blocks), the
XFS is slower than a conventional Ramdisk, at least in writing. Also, it's
not reset proof, and won't ever be (because it can't). And the docs are
currently German only, but this should change soon.

This does not mean you shouldn't give it a try, of course ;)

> and a Win95-box, the disk is definelately unreadable after a while.
I could use the same argumentation: Win95 does not trash DOS/TOS-disks.
Period. It never does it here, so there definitely is no problem at all.

But regarding the technical idea behind VFAT (use additional directory
entries with an illegal attribute to construct long filenames), there's no
chance to trash a disk, because the data is still organised in clusters
and the FAT is used exactly the same way it was before. So I rather think
there's some sort of hardware problem in either the PC or the Falcon, most
likely the disk drive.

Btw, you haven't said exactly what kind of errors you experience. Bad
sectors? Or just corrupted data?

Ciao

> off the cache to avoid some stupid brain dead moves that CAB makes.
Note that it's better anyway to use the POST-method for CGIs, as this
poses no limits on the length of the QUERY_STRING at all. NCSA httpd and
Apache, for example, have a limit of 8192 characters for a request, so if
your CGI input exceeds this length while using GET, it will simply be
truncated.

Of course, this is no reason to prevent Alexander from increasing the
maximum URL length in CAB, if this is really the problem (I haven't tried
it myself yet).

I can understand that it might be frustrating to programmers like
yourself to spend countless hours writing freeware and shareware with
little compensation, and then to see someone copy them to a $40 cd-rom.
I'm also sure that the publisher is not getting $40 for the cd-rom. The
retailer will probably take at least 40% of that, the distributor will
get his cut, and the publisher is probably down to about $15, out of
which he must take all of his expenses, time, energy, production, etc.
Most shareware programs I've seen have a stipulation that the software
may be distributed as long as the author's information is included and
the seller charges only for materials and distribution, and not the
software itself. It is a fine line, and I think some shareware

distributors have probably treaded very close to it. At the same time, they are doing you a service by acting as distributors of your product. You make disparaging comments about these companies, saying that they download from an FTP site and copy to a disk. I have a copy of Suzy B's Software Atari Software Treasury that I would bet took hundreds of hours to collect and organize and review. Just because you choose to work for free does not require anyone else to. And if your purpose is really to give the most people use of your software, you should be encouraging archivers, not attacking them. The diskzines you publish in don't reach many people (especially on this side of the Atlantic). The retailers and magazines all seem to be hanging by a thread (slight exageration, but this room gets filled with messages about who's still in business). Many loyal Atari users have a tenuous link to the Atari world, and spending hours searching through badly indexed FTP sites does not help. A cd-rom archive is a godsend to users such as myself. If it makes you feel any better, I got it on sale from Toad for $20 (1gigabyte of software). Atari users appreciate the pd/shareware that is written, but we have to have a practical way to find and use the programs we want. I think that the biggest problem at this point in the Atari world is that the market has declined to a point where people will not be willing to publish a cd-rom archive or sell disks of shareware. I also wonder why it upsets you so that someone somewhere might be making money for their work.

Try Alta Vista or Hot Bot. CAB chokes on them way too often. I consider
myself lucky if I can use Alta Vista at all!

The reason is probably that Pascal-strings are limited to 255 characters,
as the length is defined by the first byte in the string.

I'm a bit pissed off by the fact that it's not possible to buy/upgrade to
CAB 2.5 without having to pay for PPP-Connect. The upgrade from 2.0 is more
expensive than CAB 2 alone!

"PPP-Connect is a natural part of CAB" is a pathetic excuse, since when was
a OS-enhancement a natural part of an application? NVDI is also needed to
use CAB (ok you can manage without, but it's slow and ugly as hell), what
about bundling that with CAB as well?

PPP-Connect might be an excellent program (never seen it), but it should
be sold as a standalone program. I will probably never use it, so why should
I pay for it?

The problems I've had have nothing to do with the query strings being
excessively long. They're very short actually. But whenever CAB feels like
it, it chops of _everything_ from the question mark on.

> likely the disk drive.

I don't think it's the Falcons floppy, as I never have problems with "normal"
(i.e. disks not touched by Win95) disks. It *could* be the PC, although I use
a number of different PC's (at university) and this doesn't affect the
error-rate.

> Btw, you haven't said exactly what kind of errors you experience. Bad
> sectors? Or just corrupted data?

After a few swaps my Falcon says that all files are 0 bytes long. A PC
(haven't tried MagiC-VFAT) displays a more sensible directory, but the
files are corrupted.

The latest Windows-version (OSR2? ORS2?) is now installed on some PC's,
perhaps I should try them and see if the problem persist. But I find it
safer (but not especially user-friendly!) to use mtools on a Linux-box...

>
> 652 = (44/27 x (64/16) !

Perhaps I'm mis-interpretting, but if I remember correctly, the '040 was clocked at 64MHz internally with a 32MHz bus. Back when the Mac Performa used an '040, I remember all the stores displaying it with a 66/33MHz '040. When I asked what this meant, that's how it was explained to me. Perhaps the confusion is that *internally* it IS a 64MHz processor, but the bus rate on it is only 32MHz, thus giving the above results. Or maybe there are other speeds of '040 than the one on the afterburner. The Falcon has a 16MHz '030, but that doesn't mean a 32MHz '030 doesn't exist (i.e. in the TT). Or maybe I just don't know enough about these things to know what I'm talking about! <:) Just thinking out-loud! :)

I have no idea whats up with you?, I never once questioned the
validity of a CD? at no point did I even hint that there was no use
for them, why are you trying to make arguments where there are none ?

>archive is a godsend to users such as myself. If it makes you feel any
>better, I got it on sale from Toad for $20 (1gigabyte of software).

Well thank you for eventualy answering one of my original questions,
its a shame you couldn't have been more helpfull in the first place
instead of attacking me for asking a simple question... what gives ??

>Atari users appreciate the pd/shareware that is written, but we have to
>have a practical way to find and use the programs we want. I think that

I know.. WTF is wrong with you... this has nothing to do with my
question, I only asked if it was ethical to sell FREE software for
large amounts of money.. Why is it so wrong for me to ask.. calm
down..

>the biggest problem at this point in the Atari world is that the market
>has declined to a point where people will not be willing to publish a
>cd-rom archive or sell disks of shareware. I also wonder why it upsets
>you so that someone somewhere might be making money for their work.

eh hahahahaha! I asked a question and YOU got upset.. i am not upset,
well I wasn't until I read posting, your ranting man!....

I asked a simple and valid question,
I accused no one of anything,
I never said CD's where wrong,
I even pointed out I didnt think anyone was doing wrong,

Why are you accusing me of all these things when I only asked a
perfectly normal question, get real :(

Interestingly Tony, I also thought you were looking for info on what CD producers had put your games on their products without your permission!

A mate of mine had his program put on the Gemini Atari CD, and the producers were good enough to contact him beforehand to ask permission, and they even sent him a free copy of the CD :-)

As you've made so many games and shells etc, isn't it about time you put your own CD together! :-)

Best regards
Mike Kerslake

Let's really hope not, but surely there must be someone in North America
willing to handle great products like HD Driver and Link 97?

As an aside, has anyone been able to get an email through to CompDirect
recently? All my mail to them is just coming back saying the domain is not
known or something like that. The web pages are also unobtainable :-(

Best regards
Mike Kerslake

I am looking for the following:

1. Cubase Audio 16
2. Falcon Memory Upgrade (to 16 megs, populated or unpopulated)
3. Falcon Accelerator (to 32 or whatever you've got)
4. Information on Networking my Falcon with my Mega STe via the LAN port

Any help or whatever would be appreciated!

Sarte@godzilla.vill.edu

fpc@dataphone.se (Jan Persson) said:-

<snip>
>Are HiSoft still supporting the Atari-market or just selling off their stock?

Well, they did translate Papyrus 5 in time for the UK Atari shows last
April (though it looks like a rush job from the number of typos etc in
the menus and dialogs - funniest being the menu entry for the
spellchecker which is mis-spelled...). Other than that and the Zip
drive utils there hasn't been any other new software from them for
ages. They did turn up to the recent UK shows though so they haven't
totally abandoned us. ISTR an article in a magazine saying they were
no longer writing Atari stuff in-house. That would be before the
English news stand magazines shut down.

>>selling Twist 2, which I bought this time, and very nice it is too
>>(though the absence of GDOS output is irritating).
>
>Which, AFAIK, is the main difference. There are some things to improve in Twist
>3 and then it would be a perfect DB. Simple to use and with heavy features.

Some are trying: my brother-in-law for one. But that OS is not for the
faint-hearted. After several hours fiddling with it trying to trace a
rogue process that stopped you shutting it down I gave up: couldn't
even find a way of listing running processes :-(

>>What would put me off buying a German version is that it doesn't have
>>a separate resource file (at least version 2 doesn't) so there isn't
>>much scope for translating menus etc yourself :-(
>
>Nope, but would you be surprised if I said that the program is translated into
>English! (May 1995!!).

This is mad: why on earth couldn't they release the thing? Even with a
disk-based readme rather than an updated printed manual it would be
highly desirable. *gnashes teeth in frustration*

Has the author sold the rights to the English version to HiSoft for
ever or is there mileage in him selling upgrades direct?

>>Count me in as someone who'd like to see an English version 3!

AFTP has occasional problems with PUTting files, no GET errors though.
I've reported this to the author: it doesn't happen with STiK 1.12,
but does with STinG. Other than that everything seems to work as well
if not better.

>Second, I found and fixed another bad bug in the SERIAL.STX, which caused

Fine, Roger ;-)
>
>Now a question .... why are you continuing to use STiNG rather than
>PPPConnect? Is it a performance thing or because you want to run all
>your clients off one TCP/IP stack?

Performance, no. I can't see any measurable speed difference between IConnect (manual refers to PPPConnect but IConnect is the name of the program, so let's call it IConnect to avoid confusion in the future) and STinG. Both are faster than my old STiK/SLIP connection. IConnect connects faster than STinG after dialing but it's not a big difference.
The main reason why I choose STinG is that I never could get Newsie nor AFTP to work with IConnect, which forced me to log on twice if I would go on WWW as well as pick up mail, news and files.
Off course I had the option to stik to STiK but I find SLIP remarkable slower than PPP. At least fro my ISP which supports SLIRP, a kind of emulated SLIP/CSLIP. (Don't ask me, that's all I know!)

Now yesterday I played around with old CAB 1.5 and STinG just for fun.
It worked OK together with both N.AES and Geneva (even with NeoDesk :-)) I used CAB.OVL 1.2618.
IConnect on the other hand did not even dial the number under Geneva (no MiNT).
Now I don't say IConnect never will work under Geneva. I'm just stating the fact that *I* couldn't get it to work by simply switching from one OS to the other.

Conclusion: There should be no problem to use STiNG PPP together with CAB, (old or new) Newsie, AFTP, under any OS whether it's MiNT, N.AES, Geneva or MagiC as long as STinG connects OK to your ISP.
TOS!? Come on, whe are 2 years from year 2000! ;-))

Have to stop now, must think of "some peoples" phonebills, ya know.

I think this is solved with CAB 2.5. I have suffered from these problems myself in various search engines with CAB 2. First search, no problems but when it came to showing underlying pages CAB just went back to page one. Recognise? In fact I was looking at your homepage and I can understand your problem. Even tried some searching including questionmark in the CGI without problem. If you know of a certain search string that use to fail I can test it with CAB 2.5

Sorry gent, didn't mean to rant. I must have misinterpreted the tone in your post. If you are still writing software for the ST or Falcon, I am grateful for all your work. I am also grateful to the people and companies that organize and publish such programs so that they actually get to me. I've seen some nasty infighting among the Commodore people, and I really don't want to start it here. We should support anyone who's buying, selling, or producing in the Atari world. I would send you a directory from my Atari Treasury disks, but I don't know how big it would be. If it's a reasonable size, I can send it to you as an attachment.
-Mark

Thanks. Did that, no change. IP connection made, nothing resolves.
Puzzling...

FWIW, the last few lines of the debug.log:

IPCP -> Doing Conf.-Request :
[02 06 00 2d 0f 00], [03 06 cc d4 34 e8].
IPCP -> Peer does Conf.-Request :
[03 06 cc d4 34 02].
IPCP -> Doing Conf.-Ack. :
[03 06 cc d4 34 02].
IPCP -> Peer does Conf.-Not-Ack. : <-- always get this NAK
[03 06 cc d4 34 be].
IPCP -> Doing Conf.-Request :
[02 06 00 2d 0f 00], [03 06 cc d4 34 be].
IPCP -> Peer does Conf.-Ack. : <-- always get this ACK
[02 06 00 2d 0f 00], [03 06 cc d4 34 be].
IPCP -> IP connection open. <-- always achieve connection

And the dial.log:

Tue Oct 28 17:10:34 1997 : Modem connects to 397-8400
Tue Oct 28 17:10:38 1997 : IP connection established via DIAL.SCR.
Tue Oct 28 17:12:36 1997 : IP link disconnected.
Tue Oct 28 17:12:36 1997 : Modem hung up.
Total time 2 min 2 sec, problem reading fee file !
IP traffic 1 Kb sent, 1 Kb received. <-- virtually no data

As always, thanks a bunch for your efforts. They really are appreciated!

Don't get confused here. You do not need multitasking (neither MagiC nor MiNT) to do PPP with STinG and with any client, be it CAB or TelStar or Newsie or whatever. It's certainly more fun, though, but that applies to many applications.

For "PPP-Connect" and CAB you need MagiC or MiNT, as it relies on multi-tasking.

Definitely true. I do not find it terribly exciting to know the weather in california, which is 10000 km away. And probably it's boring anyway : Sun, sun, sun, no clouds ... Does that sound envious ? Maybe, weather is not the nicest over here ...

So it'd be very nice indeed if someone comes up with a version for Europe or even the whole world, but the problem is perhaps the (lack of) servers rather than the client.

Of course it does. I didn't say the contrary. I use it too in ppp as I never have had an ISP for slip.

It was just an atempt to find an "excuse" :-/

I'm also tired to hear some people saying there is nothing else than Magic... even if it's certainly a good OS.

The new SERIAL.STX still generates an initialisation failure. I tried
changing the program flags, too.

Uwe, I really, really hope that you are wrong...otherwise, what you are saying is that I will have to shut down my Atari-based BBS because I will be unable to upgrade in this country... Surely this is wrong? We've always been an underdog, underated, and misjudged, there has never been a time that I couldn't competitively upgrade my hardware and software...has this (dreaded) time arrived...???? :(

Perhaps I was not clear enought. Yes, CAB 2.5/Newsie/AFTP/MyMail works perfectly alright together with STinG and CAB.OVL 1.2618 on my Hades060 running N.AES. (In fact it flies, sometimes it's hard to believe the ratings in Cab). If you have installed CAB 2.5 and PPPConnect you have to replace the CAB.OVL in the modules folder with CAB.OVL 1.2618. STinG does not, AFAIK, work with the overlay file for PPPConnect .

This hapened to me while using a floppy on WinNT, Win95 and Falcon.

I copied some files for my Win95 & Falcon on to a floppy using Win NT. Win NT writes pure FAT to floppy (with LFN), not that VFAT32 stuff which Win95 uses (BTW, VFAT32 is incompatible with Win NT).

Went to Win95 machine, and it failed to read all the files.
Went to the falcon, it read all the files WITHOUT any problems.

I deleted all files on floppy, & recopied back to the floppy, the PC files, from my Falcon.

Went back to the Win95, now it could reads the files.

So which machine is the most versatile? No question about it, right?

Yes, and yes.

The problem appears to be ISP-dependent - it works fine with Demon, but
Internet Discovery gives the problem described above.

>>a Cab URL string?

>In the latest 2.5b version of CAB you have a maximum limit of 195
>characters for typing an URL ... enough for any common URL :)

The main problem is (as I have pointed out before) with cgi query strings,
normally used in net searches. CAB just chops off everything after the
question mark when it feels like it. I've had major problems with this
since my own site is heavily dependent on cgi's. I've introduced a few
tricks in my cgi scripts to fool CAB. But most of the time I have to turn
off the cache to avoid some stupid brain dead moves that CAB makes.

CAB is close to useless unless this/these bug(s) is/are exterminated.

1483. HELP!!! CAF and HD compatibility?

Newsgroup: comp.sys.atari.st
Date: 1997-10-28 00:00:00 UTC
From: Claes Holmerup <claes.holmerup@mailbox.swipnet.se>
Message-ID: <633go4$1j6@mn5.swip.net>
Source record: 114624

Hello everyone,
I'm going to dedicate a page on my homepages to listing which harddisks are and which aren't compatible with the Falcon and Cubase Audio.
A link to it will be located in the Troubleshooting section of my homepage.
I haven't made it yet because for this task I'm going to need YOUR help.

What I would like to know is which HD's you've tested; brand, model, size etc, how many audio tracks you can play before you get problems, if Timestretch works as it should (timestretch seems to be a big problem which varies with different models of hard disks). I'd also like to know the speed (transfer speed according to HOWFAST or SCSI-tool's speed test, as well as average transfer speed according to the manufacturer). Since the transfer speed is highly dependent on which driver you use, please tell me if you use HDDriver, SCSI-tools, ICD, AHDI or whatever and which version.
Naturally, you don't have to give me all this info - just tell me as much as you can (and anything I haven't thought of asking about here).

This will mean that everyone will know where to look for this kind of information. I already have much info about Cubase Audio and Falcon related problems on my homepage, so I believe it would be a good place to have this information as well.

Thank you very much for your cooperation,
Claes

I've had HSMODA07 installed for a long time, with 06 before that, and always
had that problem. The only time I didn't have problems was when using GSZRZ
to to the transfers. Otherwise there's the tendancy for the ST to loose a
char or 2, due to the mouse moving.

It's quite probable that it's something to do with the fact that the mouse
isn't a plain Atari mouse. That one didn't move around on it's own. The
replacement is a 280dpi and, with it connected, the pointer likes to go for
walks at the most inconvenient of times.

The easiest way to get a new version of Newsie must be by clicking on "Open
URL" in the "Special" menu in Newsie. The URL to John's HP is preset.
If you change the ...newsie.html to ...newsie82.zip it will start downloading
pronto. If you don't change you will be able to DL on the bottom of the HP.
That is, if you've got a previous version of Newsie.
In fact a WWW browser as well.

t> make heads or tails of the German documentation.

Simple enough.

AVSERVER is for use with Magic when using the MagxDesk desktop only. It adds more functions of the AV protocol to the desktop. Desktops like Thing already have this built in.

AVSERVER can also be used as a server for the font protocol.

First, place AVSERVER in the AUTO\APPS folder (you maybe using the MAGIC\START folder, depending on your setup).

Also, edit MAGX.INF to include the lines as follows - you can chose which ones to install, but Iprefer the following:

```
;#_ENV AVSERVER=MAGXDESK <- commented out
#_ENV AVSERVER=AVSERVER
#_ENV FONTSELECT=C:\AUTO\FONTSEL.PRG
;#_ENV FONTSELECT=AVSERVER <- commented out
```

Now reboot.

You can test what additional functions have been added by running AVTEST or by using PROFILE v2.22

Hallo Peter,

I just tried your new SERIAL.STX, but no luck. What's so frustrating is that WENSuite PPPLink does connect and get my dynamic IP so I can connect to web sites with CAB (text only) though very buggy. Though my ISP says they support PAP protocol, WENSuite v1.70k only works as a regular login, not PAP! With your new SERIAL.STX I can't get past the LCP[timeout] in the debug.log.

I'm willing to give you my login/Password and everything else if you would like to try my ISP. I realize the long distance phone charges would be great, so if you have a friend in the USA (Seattle) is willing, I'd give it to them for a try :) I'm out of ideas at this point ;) Danke.

Ah, that's clear enough, Janne :-)

Now a question .... why are you continuing to use STiNG rather than
PPPConnect? Is it a performance thing or because you want to run all
your clients off one TCP/IP stack?

I have just looked around my files, Jo, and find that I have an
English copy of a demo of TWIST 3.02. It's "About" dialogue shows it
to be distributed by Hi Soft.

This is peculiar because I, like you, was under the impression that v3
was never released. Perhaps it never got further than the demo
version.

It looks as though it might be a good idea to contact Hi Soft, though,
to get the real story :-)

Well I will. They're making profit from your work, pure and
simple. All this 'public service' stuff is pure crap. Do
yourself a favour, and stick a simple copyright on your proggies
with a mention that if people want to stick them on a CD, they
need your specific permission. I do this, and give permission
only if they agree to give me a copy of the CD when it is done.
So far, I've had five requests, and have had 4 CDs and two
magazines sent to me.

I've always bought my hardware and software new, until just now, so I have a question.

When I purchase a HW/SW package, and it has registered software, does that registration transfer over to me? Basically, do I pay the upgrade price for upgrades, or the full price? Just curious.

>Normally CAB doesn't truncate the URL after the '?'. What exactly are
>you doing? And which version of CAB do you use?

It's a bit hard do describe exactly what I'm doing. My site is based on virtual pages. There is one version of every page on disk, but the reader choses in a form which character encoding he wants to use. A cgi processes the page and presents it to the reader in the desired manner. Every link in that page (and every page from then on) is actually an URL with a cgi query string (but it's not very long). When the reader choses such a link CAB ofter (but not always) decides to chop off the query string. If the cache is being used, CAB often seems to think that the it should reload the same page again, since the adress is identical up to the question mark (I always have to turn off the cache!). Sometimes it uses only the part before the question mark, which gives a server error. For some reason CAB behaves a little better if the page uses frames.

Try to visit my site. Use the adress I gave here before (the corrected version). Surf around a bit, resize the window, back to an earlier page, you'll soon run into trouble.

But I have not tried CAB 2.5. I have the demo version myself and a friend of mine has 2.0a. I often check my pages with different browsers. Lynx is available at my Unix account. Netscape and Explorer are available at the local library. No problems with any of them. But CAB does a lousy job.

But of course this might be fixed in 2.5. I surely hope so.

Hi Clauss,

If you're looking for pages with cgi's that are guaranteed to give
CAB fits, go to

http://www.searayboats.com/

and follow the "frames" then "product list" links. CAB dies a not
very graceful death.

I looked at the source a while back and noted not much displayed,
just some cgi's. Neither 1.5 nor 2 demo can display this page. When I
get 2.5 (ordered from Systems for Tomorrow) I'll certainly try again.

Thanks,

Pat

AtarIRC uses AVR samples, usually recorded using SAM on a Falcon.
It can also recycle WAVes converted using 525. You need a machine
with DMA sound (eg: STE, M-STE, TT, Falcon) to support this.

525 is available on most FTP sites, or on AtarIRC's homepage at:

The best answer to this is to install MiNTnet, adding NFS if you
want file shareing between computers as a local network.

Theret are some ACSI to Ethernet converters, as well as some SCSI
to Ethernet cards. Check out Norbert Weizereck's homepage:

http://members.aol.com/norwiecz

>I've seen transievers for PC parallel ports, so why can't these
>be used with some appropriate software?

Parrallel port is simply not designed for mass-media transfer.
PC adapters to use ZiP or IDE drives or Ethernet on this port
use dirty tricks that should not have been attempted at all.

I know this sounds like a daft question and you lot have been probably been asked this many times before, but:

Can you get a BNC/RJ45 Thin ethernet card for the Atari Falcon which is compatible with Microsoft Networking for Windows, or Novell Netware 3 or above?

No, I didn't think so. There should be though. I've seen transievers for PC parallel ports, so why can't these be used with some appropriate software?

My Atari is becoming rapidly redundant due to it's lack of networking with the 3 PC's in my house; it's far too awkward to keep transferring stuff via floppy and the like. Especially as I can't get Ghostlink to work on it.

Machines:
Atari Falcon030, 4/200(standard)
PC IBM 6x86 P166+, 48Mb Ram, 4.3Gb Disc
PC SGS 486DX2/80, 32Mb Ram, 1.2GB Disc
PC AMD 386DX40, 16Mb Ram, 200Mb Disc
US Robotics 28,800 modem
All on thin BNC ethernet, 1 3com3509 card, 1 SN2000card and 1 NE2000 card, nothing for the Falcon (moan!)

> software...has this (dreaded) time arrived...???? :(

The unfortunate truth is Comp Direct has been loosing money over a
decreasing number of sales, thus endangering their own ability to
keep on importing even best-selling products.

As a result, Comp Direct lost their right to directly import Uwe's
softwares. They will now have to order through System Solutions.

Chris Krowchuck is a nice individual, but his business is fledging,
and there is really only enough market left, in North America, for
ONE shop to survive.

The currently low value of the Canadian currency doesn't help, when
one has to rely upon importing to provide its services.

Myself, I had been saving to upgrade to HD-Driver 7, but ordering
from outside Canada is simply too costly and overly complicated.
Given the fact that my TT's SCC just blew up (I now use the MFP),
I am now faced with the reality of soon HAVING to move to Win95.

My beloved TT's days seem numbered..... when Uwe Seimet and his
german friends make it impossible for americans to remain within
the Atari crowd. 8^(

Oh yes :-)

I found that v1.08 (the 15-10-97 release) gave MUCH improved
performance with fewer of the "pauses" which used to happen. Do it!!

Peter has recently cleared a bug in SERIAL.STX (which didn't affect
me) and this is in the more recent MODULES archive so you might be
better picking up DIALER ,MODULES and CORE separately.

1513. Mega STe voltage(?) problems

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: kennethm@tripnet.se
Message-ID: <99284635_000021_OASIS_NEWS@000021-tripnet.se>
Source record: 114445
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

My MSTe has acted strange lately. Sudden lockups, impossible to boot etc. I have reseated all socketed chips and inspected the power supply for dry solderings and now it seems to run again. But this is the third time I've reseated the chips so there is possibly something else that is at fault. When the machine did not boot at all in high res. I tried to start it in medium res. and it worked perfectly!

What's bothering me is the low voltage on one of the +5 volt lines. On the orange cable I get only 4.91 Volts. Is this normal and within working limits?

This machine has always produced interference lines on the monochrome screen and it looks like the video signal is a bit noisy. (The monitor is OK!). A dotted horisontal black line looks solid but a vertical is ok (the TOS desktop rubber band for example). Compared to my other ST and Stacy (with monitor) the picture looks darker and less stable. Any connection to the above?

From: kennethm@tripnet.se
Message-ID: <91610806_000021_OASIS_NEWS@000021-tripnet.se>
Source record: 114446

The latest version of Sting works very good in ppp mode with my ISP. Due to some changes at the ISP STiK sized to work so I was forced to browse with MSIE on the pc.

I have tried to network to ST:s with Sting over the MIDI ports but I can't get it to work at all. Following the instructions in the .HYP does not help. I can't ping the other machine and have even had some crasches (11 and 2 bombs). Has anyone had any success with this? I do have the proper hsmoda routines loaded and data gets sent over the line (checked with Stalker) but Sting does not seem to catch it. I'm new to IP routing so possibly I'm doing something wrong.

I would like to put up a network with a Mega STe as "router" and attach the modem to Modem 2, pc (Win-95) to Serial 2, Stacy to Midi and Mega ST to Modem 1.

I suppose the hardest problem will be to make Win-95 talk tcp-ip on a null-modem cable to the MSTe but there was some talk in this group, on a similar setup with MiNT on the Atari side, about a "fake" modem driver for win-95 that worked?

Normally CAB doesn't truncate the URL after the '?'. What exactly are
you doing? And which version of CAB do you use?

In CAB you can enter only URLs with about 190 characters. But internally
URLs can be about 8K long for forms (POST and GET).

>Interestingly Tony, I also thought you were looking for info on what CD
>producers had put your games on their products without your permission!

Hmmm I was and I wasn't... as I have no idea whats on where, then I
was trying to find out, It was merely a thought I had, I realy have
absoloutly no idea about CD's or what sort description arrives with
them,
My question was twofold, On the one hand..Is someone simply dumping
an ftp site onto a CD then selling for lots of dosh, or is the job
being done properly.. And Secondly, it does look impressive if I can
also add "Also available on CD" to my html pages :)
The first question has been answered, albiet in a ranting sort of way
<?> :)

>A mate of mine had his program put on the Gemini Atari CD, and the
>producers were good enough to contact him beforehand to ask permission,
>and they even sent him a free copy of the CD :-)

I have recieved a few (nice) emails and I now know that lots of my
software resides on a few CD's out there, and I do recall Michael
Burkley enquiering about making up a CD... but never heard more,

I realy don't have any qualms about the situation, I guess I didn't
ask the original question properly, although I re-read it and it still
looks like a valid question to me....."Damm ascii" ;-)

Excuse my ignorance, but who is Uwe, and which software titles are affected? (I'm new on the net and just catching up on the Atari scene).

I don't agree with your conclusions. I just sold my TT, and waiting for Windoze and the Wintel setup has me anxious to get a next generation TOS setup.

Hi, I think tht's a good ide. I strted working on such thing, but the
need was mainly for games. The bad thing is that the resolution change
is not very clen, meaaning that when you exit, the resolution will be
all wrong.

I am sure someone with skills can do something cleaner than what I did
(FALCON_X). But the idea is there :).

On my Falcon (4meg) if I use a NVRAM program to set HDD waiting time to 0, it seems to skip the memory testing. I cannot remember which NVRAM program but I cannot remember that it was in german (I was messing around with it [dangerous!] as I don't read German).

Yeah but, yeah but...

My problems with Newsie and attached files are at the other end -
trying to extract/decode attached files from a message that I have
received. I pull down the "Extract Binaries" menu item, but Newsie
never seems to be able to find the beginning of the encoded file in a
message.

So instead, I have to save the message to another, named file (like
blubbo.txt) and then load it into Everest and clip off the header and
text message, then run the remainder through UUdecode or UnMime and
then I have a binary or compressed file. Isn't Newsie supposed to do
all this automatically?

1535. IConn/Geneva/MiNT works!

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: fpc@dataphone.se
Message-ID: <636cji$ot4$1@zingo.tninet.se>
Source record: 114467

Played around a little with MiNT/Geneva and found that IConnect/CAB works perfectly well in this environment too.
A very straightforward MiNT/Geneva configuration.

```
C:\auto\jar40.prg
C:\auto\mintnp.prg
C:\auto\nvdi.prg
C:\auto\drvin.prg
C:\auto\scc.prg
C:\auto\sockets.prg
```

```
# mint.cnf# =======
GEM=c:\auto\geneva.prx
setenv HOME=C:\USER
```

Geneva.cnf as "is" and then it works

Only Geneva and IConnect seems to be impossible. Got IConnect to connect to my ISP (which i couldn't yesterday because I forgot to switch off the "Active" button in Sting.cpx) but CAB just freezes when resolving host ending up freezing the system as well.

Greetings, janne

1536. Any News on plans for New WWW Install?

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: Eonic Man <eonicman@erols.com>
Message-ID: <3456D9DD.BC71A6AB@erols.com>
Source record: 114468

Guys,

What is the deal with the WWW installations packages? Now that there is STing with its PPP and possible ethernet support, it seems that a new WWW install pack should be assembled. Perhaps one that includes moving files off a partition, creating a Minix partition, then moving the files back over and creating a cache folder. Perhaps this package could included Oasis or XaAES for better AES support as well as the best viewers for file types. A web page could be created to test your CAB setup on including most of the file types standard to the web and specific to TOS such as FLH, AVR, animated (color cycling) DEGAS pix, etc.

1537. N.A.G MEET!

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: All@Sea
Message-ID: <701_All@Sea>
Source record: 114469

THE NEXT N.A.G. [Northants Atari Group] MEET WILL BE TAKING
PLACE ON 14th through to the 16th November.

N.A.G. [The Northants Atari Group] is a general gathering of like
minded Atari users, there are no hard and fast rules on what to do
save for having a good time.

Here's the address to be at!.......

43 SPENFIELD COURT
LINGS
NORTHAMPTON
NN3 8LZ
ENGLAND

Some of the things we'll be up to are:

DEATHMATCH DOOM (JAG LINK)

CODERS CORNER.

DEMO SHOWINGS

ST LINK GAMES (F16, LOTUS, VROOM ect.)

REAL TIME ARTICLE.

VISITATIONS TO THE LOCAL PUB

I'm also open to suggestions as to what else we can get up to :)))

There is NO ENTRY FEE, NO MEMBERSHIP FEE, all you need to do is turn
up on the day(s) AND HAVE SOME FUN!! ;)))

IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT :

IF YOU READ NOTHING ELSE READ THIS!!!

IF you want to eat 'in' then a small 3 pound payment to the food
cupboard fund will be expected, otherwise, there's a chippy and
McDonalds no more than 5-15 mins respectively walk from my house.

IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT :

DOSSERS READ ON: Sleeping arrangements.

Sleeping arrangements are, as per any show really, bring a sleeping bag/blanket ect. and sleep where you can, I've a three seater settee and 2 chairs, one single bed and one double bed (but THAT'S mine and Mandy's an' I ain't sharin ;))....the floor has NOT yet been reserved hehe...but, there's a good chance most, if not all of us will be awake through the night, the coffee will be on ready standby ;))

THE END BIT: All done...

I'm not promising this'll be the ultimate in Atari meetings, it was never intended to be so however, I think with a house full of Atari machines and a bunch of Atari users we can at least have a great time...

Any queries will be answered, call me, Dave Hollis for more information on:

+44-01604-416951

Look forward to meeting you...

Dave...

Yes I am currently making software, if you have a wonder over to
http://www.airtime.co.uk/users/stosser
You can see what I have released and see screen shots and info on my
current project :)

> directory from my Atari Treasury disks, but I don't know how big it
> would be. If it's a reasonable size, I can send it to you as an
> attachment.

I haven't had any info on ATARI Treasury CD?, I have no idea how big the
list would be, If its not going to cost you a fortune to send, then please
do, to worden@airtime.co.uk as that is also my mailbox and only checked at
cheap rate times :), so best for big mails,
But if the listing is very big? then no need to go to that trouble as it
would cost you a klot to send

Fanx :)

Yes, great pain:-(but I don't understand why. I have 0.82, like you,
and it works a charm by clicking Extract Binaries. I've never had to
worry about any preceding text or what coding is being used.

I wonder whether Newsie is having trouble finding UUD and MUNPACK? I
have these at the same level as Newsie. I don't think there is a
special "Path" setting for these - John probably assumes they are
there alongside NEWSIE.

My son sold his 1040STe I gave him for birthday present and bought an Amiga
1200 some couple of years ago (the snake). He fell in love with it and was
always arguing about it being better than my Falcon at the time. I have to
admit the built in multitasking is very efficient (never told him though) but
otherwise I don't like its OS.

>Has the author sold the rights to the English version to HiSoft for

Nope, and I'm not. But did you ever hear anybody talk about this before you bought IConnect? Some guy yackediyacked in this area that the above clients did not bother what TCPIP/IP stack they where run under. I think he will be rather surprised when he tries to run POPWatch on IConnect. ;-)

>I have been after programming docs for PPP-Connect for ages, but can I get
>hold of them? No I Can't!!

For ages? Hm... I've heard IConnect is a development from Blip which I think was some kind of developers tool for TCP/IP stacks. Read about this "ages" ago so I can remember wrong. Maybe somebody else knows.

>I'd love to make POPwatch etc. compatible, but I guess ASH (in all their

>*doomed* on the Atari! ASH should be trying to sell it by releasing
>programming docs etc. *All* internet clients on the Atari *are*
>freeware/shareware with the exception of CAB2. Says it all really.

I think it's only fair that Alexander Clauss gets paid for all the work he has put down in CAB.
ASH has been around for some time and know how to stay in business. ;-)
I don't think IConnect is doomed if it's bundled with CAB though. You just have to choose, stay with CAB 2 and use STiK/STinG or upgrade and support future development in CAB. We haven't seen the mail/news/ftp clients for IConnect yet, they're supposed to be released before X-mas, if they are good then I can't see why IConnect should be "doomed".

>AFAIK, PPP-Connect (let's call it that 'cos I think it's its proper name),

In fact the name of the program is IConnect but feel free to call it what ever you want. I don't mind. ;-)

>only works under a pre-emptive multitasking system (which Geneva isn't).
>This is covered within other threads in this newsgroup.

It seems so yes. Worked perfectly well under MiNT/Geneva once I tried it.

1551. New Sting and Edith Pro

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: tparrett@fast.co.za
Message-ID: <6388mg$1mt$1@news.ibi.co.za>
Source record: 114483

Since installing Sting a few days ago I have noticed that when quitting
Edith Pro, which I use as the external editor, the sytem has a two bomb
crash. It doesn't need a reset but if I have been trying to save an email
message or newsgroup posting that the message is lost. The crash only occurs
in 16 col and 256 col resolution.
I have tried removing and re installing the auto prgs one by one and it
appears as if Sting is the culprit.
My system is a 4Mb Falcon with a SVGA monitor.
Could Falcon users try this out before I report the problem to Peter.
Thanks
Ted

1555. Re: CAB v2 Demo - Problem with long URL

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: bertilow@aristotle.algonet.se
Message-ID: <6360ujnjm1@zingo.tninet.se>
Source record: 114502

Jan Persson skribis:

>>The problems I've had have nothing to do with the query strings being
>>excessively long. They're very short actually. But whenever CAB feels like
>>it, it chops of _everything_ from the question mark on.

>I think this is solved with CAB 2.5. I have suffered from these problems
>myself
>in various search engines with CAB 2. First search, no problems but when it
>came to showing underlying pages CAB just went back to page one. Recognise?

Sure do!

>In fact I was looking at your homepage and I can understand your problem.
>Even
>tried some searching including questionmark in the CGI without problem. If
>you
>know of a certain search string that use to fail I can test it with
>CAB 2.5

This is one adress to a page at my site (split up on two lines):

<http://cgi.algonet.se/bertilow/htbin/
cgiwrap/m.cgi?mt=ghu&lk=pmeg%2Fpmeg7%2F&ds=k_bazo.htm>

(I hope I typed that right!)

Try it. Then resize the CAB window, or do anything else that makes CAB
want to reload the page. Or follow some of the links on the page (they're
all cgi-adresses!). Then try to back up to a page of mine that you have
already visited. CAB can't cope with such manoevres if the adress is of
the cgi kind. Other browsers (e.g. Lynx) have no problems.

BTW. I once had a name for my cgi script that did not end in ".cgi". Then
CAB didn't seem to be able to recognize the query string at all! But I
never tested that much.

1557. TT Battery Voltage?

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: lockwood@freenet.calgary.ab.ca
Message-ID: <636bhs$or6@ds2.acs.ucalgary.ca>
Source record: 114504

The lithium battery in my TT030 just died.

Now I know that the replacement should be a Tadiran TL-5242/W which is a 3.6 volt battery. The only battery I can find locally with the same connector on it, is a 4.5 volt Alkaline battery by RayOVac, which I got at Macintosh store - nobody, it seems, has a 3.6 volt battery.

Will I fry my TT if I install this? Will the difference of 0.9 volts (assuming the new battery is charged right up) really make any difference to the circuitry in the TT?

From: Eonic Man <eonicman@erols.com>
Message-ID: <3456DFE3.12AD5E0C@erols.com>
Source record: 114506

To the programmers out there:

Is it possible to have an Audio CD player that uses memory or hard drive space to buffer the audio data before sending it to the speakers? This way, one could apply special effects to the audio such as reverse play, slow down/speed up tempo, change pitch, add echo, surround or other DSP effects, etc. Also the player can also be made to playback audio files saved to a DAT backup tape drive in Cubase Audio, AIFF, AIFC, AVR, WAV, MPEG (1,2), or Audio DAT format.

Take a look at my Quick FAQ, you have several options for connecting
with a PC. With a mac however, I think you're stuck with a Zmodem serial
connection, or good old disk swapping.

>
> I would also be interested in info on importing atari formatted disks on
> other platforms (MACorPC) in order to get some software on the computer.
> GEM is nice but doesn't do much on it's own...
>

No problem. Format the disk in MS-DOS format (or on your mac with PC
Exchange) in DD 720K mode. That's all, then stick whatever you want on
them. TOS can read/write DOS disks, but not always the other way round.

Cross-posted to: comp.emulators.game-consoles,comp.emulators.misc,comp.sys.atari.st,maus.sys.atari.f030

That's right, for the Atari Falcon 030 programmed by the Reservoir Gods! And what's more, they have added a feature never seen before on any emulator! Custom digital sound effects and palette! Pretty cool stuff, unfortunately it only runs 3 games so far, Bubble Bobble, Mario Land, and Bomb Jack. You can get it at : FTP://FTP.CS.TU-BERLIN.DE/PUB/ATARI/INCOMING/HESCE/ . Erm, sorry about the caps. Look for the files called mario.zip, bombjack.zip, etc. It is a little slow on a stock Falcon but what the hell, it needs all the software it can get. -Satcom2

p.s. send these guys 5 bucks or something, they are really cool to keep the Falcon game thang goin' on

>mark and other frustrating things.

It's more than frustrating. It's sufficient reason not to buy CAB. It's
just too bad a program. Some people have claimed that it's just as good as
Necscape Communicator. Now that's laughable!

1564. D110 editor on a falcon!?

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: Vincent Bakker <bakkerv@pi.net>
Message-ID: <3457AADB.53B5@pi.net>
Source record: 114511

Hi everyone,

I'm running "D110 manager" on my Falcon, but I have some problems with the screen io. 'think this is because the program is written for an atari st.

Does anyone know of a newer version of the program? (mine says (C) '89) or any other solution to get it working?
(I tried backwards III but it doesn't help).

greetz,
Vince

ps problem is that after file select box has appeared the screen behind the file selector isn't redrawn c.q. unreadable, so I can't do any disk operations.

I had this problem with the serial cpx from STinG 1.06 and Cops. No more
brobs with the one from v1.08.

Under-voltage is not usually a problem. You will prob. find that your
"dead" battery is a little below 1v.

I would not have thought that 25% over-voltage would be a problem
either but I appreciate your concern! Most of these ICs can tolerate
reasonable over-volts. I'm not sure I would try it though!!

When my Li battery goes I am planning to replace with a couple of 1.5v
Duracells in a battery clip. Far cheaper and easier to obtain. The
small under-voltage will be NO problem.

>What is the deal with the WWW installations packages?

Well, I think that now the "great www-mystery" is cracked people are
putting together their own configs to suit themselves.

Once-upon-a-time there were few packages but a lot of black magic.
(Sorry, ASH, no insult intended!) Now there are LOADS of stacks and
clients which are changing almost daily. A WWW-Installer couldn't keep
up with it.

However ..... newbies will always be appearing and I agree there
should still be a basic package, say, STiK, CAB 1.5, Newsie, HSMODEM,
which would get starters off the ground.

So did it work? I did also notice that they say something MD-5 RSA Data
Security. Does this mean that they have some sort of support for secure
transfers??? SounCharles Silver wrote:

ds very interresting if it works. Does CAB have something
similar? You get this info by pressing the "back" button until you get a

And it's simply wonderful!

The best desktop I have ever used TBH. Easy to set-up, very robust and
stable and a couple of years after first using the program I'm still
finding lots of useful little functions! :-)

Get it, use it and then register it. It's really worth it!

BTW, I am a very happy registered user!

Best regards

First time I have heard about this. When you select Open URL, what
does happen? Any file transfers, status box, etc.?

I spent quite a bit of time on the browser to just let it drop without
knowing that there are people having problems.

"It works for me!"

The newest version is on the imaginet site. You can also get it at
ftp://128.120.234.42/atari (follow the path to, I believe, Web Browsers,
then WEN Suite, and then download whatever the highest version number
there is, which this morning was 2.21).

TAF/SONGBIRD SIG NOVEMBER 15th!

On November 15th, 1997, both the Toronto Atari Federation (TAF) and Songbird Music will present a Special Interest Group presentation for all users of Atari/TOS computers. This event is designed to help all Atari users find out just what support is still out there for their choice of computer, and just what an Atari computer is still capable of!

Among the things that will be presented:

- Internet and the World Wide Web - Dan Dreibelbis will be demonstrating the variety of different programs for utilizing the different features of the Internet, including Usenet, the World Wide Web, FTP, IRC, and e-mail. Hopefully the newest version of the Crystal Atari Browser (CAB 2.5) will be there for demo.

- modifications and memory upgrade - James Alexander and Jeff Thomas will discuss about bringing your STs up to speed and to put in the most RAM possible

- advice on how to get the most out of your classic Atari computer both from a hardware and software standpoint

-software libarary

- MIDI demonstration (tentative)

more on this as details become more cohesive.

Admission - FREE.

Time - 12:00 - 6:00 PM

Location - 801 Queen St. West, Toronto, Ontario, Canada

Get in touch with Dan Dreibelbis as dreibel@idirect.com or Mike Flock at sales@songbirdmusic.com for more info.

From: dreibel@idirect.com
Message-ID: <34576ece.0@nemo.idirect.com>
Source record: 114530

Agenda for Toronto Atari Federation meeting, November 19th, 1997:

It's time once again for TAF's annual and famous FLEA MARKET!

Yes, once again TAF hosts a night where Atarians from around Toronto and elsewhere converge to buy and sell hardware and software for our favorite platform. Need a part or peripheral? Want to go to a more powerful system? Looking for that rare piece of software utility or game? You just may find it here! TAF's large library of PD/Shareware will also be there for sale to interested parties, as well as TAF's membership clerk for taking new memberships or renewing current ones.

Tables are available for non-members to display their products for the low cost of $2.00 , and may be reserved by contacting Dan Dreibelbis at 416-766-4743 or via e-mail at dreibel@idirect.com . Setup starts at 6:30, with doors opening at 7:30 PM; entry to non-members is $2.00.

As always, piracy is not condoned by the Toronto Atari Federation; anyone found to be selling pirated software will be dealt with severely!

Come and sell your old junk, and buy yourself a treasure! Have Fun!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

Source record: 114531

HELP!

I have a 14Mb Falcon, and yesterday I was playing with some recently downloaded stuff, none of which went into the auto folder or CPX folder, and suddenly when I tried to run ANYTHING it said my system was out of memory. The programs do run, however, but not without showing this dialog. Before this it always showed about 11Mb left under the System Info CPX, but now it shows about 6Mb left -- still enough to run even the tinyest of programs, I would think. But even with that it's giving me the "Out of Memory" dialog. What's the deal? I put nothing into the AUTO folder. I added nothing to my CPX list. The only thing that changed at all was that I used the "Install Application" option to connect a file type to one of the new programs I downloaded (from the Apex Viewer stuff). I did save that configuration, though, before I realized what was happening, but I see nothing wrong there. If I boot with a clean system and change resolutions so that it loads the newdesk info file, ACC's, CPX's, and icons, it still shows a little more than 12Mb left. What's going on?!?!?! I took out any AUTO programs that I thought would take up a ton of memory, and it still showed *exactly* the same amount as before. A little more than 6Mb. I'm totally confused! Anyway, if anyone has any suggestions, PLEASE tell me! Thanks!

Mike Freeman

1585. Newsie82 question...

Okay, I've got Newsie v82, and I've got it working (mostly). My question is, when you FTP to a site and go a couple of directories deep, how do you back out of them? In v80, it showed this:

.
..

and you could click on .. to back up one directory. Right now v82 isn't showing this. I did change the font size (geez, can anybody really read that small?) but changing it back didn't help. Is there an option somewhere that I can pick to show this? Thanks in advance for any info! :)

1586. STing probl. resolved!

Newsgroup: comp.sys.atari.st
Date: 1997-10-29 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <878128648_OASIS_@pcc-uky.campus.mci.net>
Source record: 114533

A few days ago, I posted a message about not being able to get client apps. to work under my CSLIP connection with STing. Happily, I'm able to report that I've now got CAB 1.5, Newsie v82, PopWatch, and AtariIRC working...

As I posted earlier, everytime I tried to use these programs, I would get a crash, or a message asking for a password, and no matter what password I used, my host rejected it. Here is the -only- thing I changed to get my particular setup to work. At the end of the DEFAULT.CFG file, there is a section for entering data that is used by the CAB.OVL file. I had put my info in there. I blanked out these lines, and all the programs above just started working fine. Sounds strange, but it worked! Now, I'm off to visit Web sites that I've only been able to drean about till now...

Thank you Peter, for STing! (I like the animated GIF of the gears on your Web Page!

Thank you Gary for PopWatch (it is a way-cool program!)

and all the other authors for the great Internet apps.!!!

>/ | \ http://wwwperso.hol.fr/~nbales/quickfaq.htm
>-' ' `- http://www.geocities.com/MotorCity/2090/quickfaq.htm

..I have an STf 720K floppy only. It has 4Mb of RAM and I set up my net sessions from extended format floppies - 83K

I run boot CAB 2 and Chameleon (a Desk ACC switcher), STiK and a rest-proof RAM drive. I then, load any files I may want to /dcc via ATARirc into the RAM disk and then load CAB. I then switch to ATARirc on a second floppy and load it as a Desk ACC through Chameleon.

Then, evoke STiK and connect via a V34 modem at 19,200 and browse or IRC... When /dcc-ing in IRC you can view your pics by loading from the RAM disk int CAB and see them instantly without rebboting setting up! OK, a hassle to HDD owners, but I get by and what do I need a HDD on my ST for after all the years? I'd rather buy something else - like a Toshiba Libretto palmtop PC!!!

No, this is a cheap and efficient setup.. Ingenuity is what computing is all about!!

> above?

Microsoft invented a proprietary protocol again, Netbeui which isn't compa-
tible to anything else. With Unix machines you can run Samba which does the
protocol translations. I've been told there is a Samba port for MiNTnet, but
I'm not sure.

Novell uses IPX which is not supported by any of the TCP/IP stacks for Ataris.

You can do basic TCP/IP networking though with Windows and MiNTnet for instance,
or STinG soon, but no networked file system. So FTP, WWW, etc should work fine.
You won't even need the extra Ethernet hardware if you're satisfied with a fast
serial link.

Make a serial link with a null-modem cable, and run it with 115 kbps. You can
do quite a lot with it using either STinG or MiNTnet, although it's of course
slower than Ethernet.

> But not with the CAB.OVL for MiNTnet... ! ;-))) (may be i'd better try ?)

You haven't looked into the CAB.OVL docs, have you ? Dunno why people
keep ignoring documentation. And I dunno why I keep writing elaborate
replies instead of saying RTFM.

> So, does someone can tell me what's append ? and if there is a
> solution... ?

The CAB.OVL docs will tell you that error #600 is a resolve error. So
it's time to try the Dialer's Resolve tool to resolve JUST the domain
name part of the URL (the stuff AFTER the "http://" until the first "/")
If that tells you too that it can't resolve the domain name, then either
your settings of the name server IP address are wrong, or RESOLVE.STX is
not loaded at all, or the domain name indeed does not exist.

Perhaps you use an outdated SERIAL.STX, which had a bug capable of corrupting
foreign memory. ? Get the bugfix version from my web page (Download MODULE.LZH
which contains the newest SERIAL.STX.

Yes.

>could apply special effects to the audio such as reverse play, slow down/speed
>up tempo, change pitch, add echo, surround or other DSP effects, etc. Also
>the player can also be made to playback audio files saved to a DAT backup tape
>drive in Cubase Audio, AIFF, AIFC, AVR, WAV, MPEG (1,2), or Audio DAT format.

The problems are

1) reading the data fast enough
2) applying the effects
3) playing back the sound data

1) You can read directly through SCSI (with the right drive). However,
you won't probably get more that 3x speed, so the time left for conversion
and playback is very small.

2) To do that in real time, you will probably need a DSP.

3) If you do that on a unmodified TT/Falcon, you will also have to convert
to 50 MHz.

What you can try is:

a) Install SPIN! or an equivalent driver capable of mounting audio CDs
as a WAV file system. (http://www.muenster.de/soft_e.html#spin).

b) Write/Get a program which can read from WAV files, apply the effects
and pipe it into the sound system. Under MiNT, this obviously could be
a pipe of small TTPs.

My comment was not directed specifically at Uwe, although I must
observe that too many great softwares remain un-translated, or
simply unavailable outside Europe.

If you look elsewhere in the thread, I *do* observe that CompDirect's
situation (eg: shrinking Atari market= less revenues) is also partly
causing this.

>I'm making no judgements on anyone here in public, but I can understand
>why software authors take the action they do sometimes.

I understand their motives. Unfortunately, users suffer from this.

The question remains:

How will Atari users from Canada/US manage to stay involved when
every Toad and CompDirect looses money, and eventually withdraws
from the market?

Already, ordering from US is WAY too much trouble. Ask a certain
Lonny Pursell how tricky and complicated it was to ship me books
and CD-Roms I bought from him, let alone cashing my cheque.

Given this, ordering from directly from System Solutions is even
less of an option.

First, turn on the keyboard navigation (under newsgroup reading options in
the prefs menu) and then the backspace key moves you up the directory tree.

BTW, I think this is in the docs. Can't be certain since I only glanced at
them when I was first installing/learning about it.

1598. having some luck :^)

Newsgroup: comp.sys.atari.st
Date: 1997-10-30 00:00:00 UTC
From: andrew.styrmo@bbs.trideja.com
Message-ID: <878183866@bbs.trideja.com>
Source record: 114345

I am having a bit better luck today with file attachments in Newsie 0.82. It seemed to make a difference when I put munpack.ttp and uud.ttp in my "work" folder instead of with the newsie.prg. They actually worked! The uued files seem to test fine, they were converted from jpeg to uu then extracted and I had no trouble reading the extracted jpeg. I did not have such good luck with munpack (mime encoding) but I do know that it was at least running. Again, I tried taking a small jpg and mime encoding it but when I tried to extract it I got the following message from munpack:

warning: premature EOF
munpack: terminated by signal 80

It created a so-called jpg file but it was not recognized as a picture file by TrueImage.

So it looks like my hassles are with munpack.ttp now, and not the great Newsie ver. 0.82 :^)
Anyone had similar problems or any clues as to what is screwing up here?

;)

You Asked :)

I personaly have NO problem with your sig, and I don't personally mind
large sigs, BUT I can see why people "may" have a problem with yours, you
see you have one of the larger sigs, but only 1 (one) line actualy contains
any information ?
A thirteen line sig with BBS information and thus used as an advertisement
would probably be more acceptable than 12 lines of ??? and one line of
advert,

Like I say, I don't have a problem, but am contributing to the thread with
a point of view :))

Cheers...!ynoT

As most programs are shareware and distribution is paying the
author in it itself, the few freeware authors who would like
something back hardly make a dent, as my example proves I think.

>(I tried backwards III but it doesn't help).

Hi Vincent,
I'm not sure if you've already tried, but maybe it works if you set the
Video to "Compatible settings - ST High" or whatever it's called. The
problem may be that the program was made for 600*400, but when you choose
the normal 2-color mode, you get 640*400 and it might mess up the
graphics...

On my modems the ATT command for saving to the flash ram is ATWx with the x being either 1 or 2. If the modem is a 14.4kb, your mostliky hitting the top 14.4kb rate, what you are seeing in the way of higher speed is from the modem TO the computer itself. Find a BBS and do a z-modem upload, if all is good, you should see from between 1,600cps to 2,100cps.

My own problem is very basic. I've hacked the pre-supplied CIXIP login so that it will dial correctly and I can manage to connect to Web pages that are on my own ISP, but when I try to access any external site I am told access is forbidden.

I don't know whether this is a problem with my provider or with the way the software works... B^{<

Hi All fellow WRAGgers,

Here are the details of the change of venue for the next WRAG meeting, Sunday 9th November. It will be held at: 1 Vale Street, Brighouse.

At the meeting there will be a Atari Jag where you can try your chances at Doom, A v P and on Jag CD try out Hover Strike, and Myst.

Also for discussion for you would-be programmers, try your hands at creating a program for Group Members - ideas to be discussed at the meeting.

How to get there:-

By bus from Bradford: get the No 363 bus, running from stand B4, at 15 and 45 mins past the hour, in the Interchange - ask for Brighouse police station and ask for the driver to tell you when you are there (it is approx 25 to 30 mins from Bradford). It is the stop after the MARTINS NEST pub!! (on your right).

Cross over the road, and head up Gathorne Street, immediately after the bus stop to Bradford. Get to top of this street, reaching a crossroads: road running left to right is Old Lane: directly opposite is Vale Street -- our house is the first one on the left hand side -- knock on the bottom door...

By car: get onto the Manchester road, heading towards to Huddersfield. Stay on the main road, following the signs for Huddersfield/Brighouse, past Wyke, through Bailiff Bridge (roadworks), and follow the road until you pass the MARTINS NEST pub on your right, and turn right immediately before the pedestrian-controlled crossing, drive up this road (OLD LANE) for 50 feet or so, and turn left by the BISMILLAH curry house (you are still on OLD LANE !!!). Third street on the right is VALE STREET. Park where you can!!! Our house is the first one on the left-hand side, knock on the bottom door...

All welcome, from 1 pm onwards until 6 pm (ish), if you want to bring anything I'll try to accomodate you _ might mean having a split-level

meeting. Also bring ideas for attracting more members -- and also locations
for meetings??

That's about all for now -- CU all on the 9th

Regards...STE....The Mad Pole..

1628. WANTED! Atari Mega 4 ST with TOS 1.4!(USA)!

Newsgroup: comp.sys.atari.st
Date: 1997-10-30 00:00:00 UTC
From: bensmith@user1.teleport.com
Message-ID: <639h3d$1nj$1@user1.teleport.com>
Source record: 114409
Cross-posted to: pdx.forsale,or.forsale,pnw.forsale,pnw.wanted,comp.sys.atari.st,comp.sys.atari.st.tech

Looking for an Atari Mega 4 ST. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade. I would like to test the Mega 4 ST before I pay. I was recently burned by an old friend who said the Mega worked. He couldn't refund my money. I can't afford to be burned like that again. Please do not reply here as I dont read message bases. Please direct your reply through E-Mail to bensmith@teleport.com or call Ben at: (503)256-9974.

P.S. I'd need to keep this transaction solely in the United States.

Another Poster suggested MiNTnet.

I have set this up (serial port only of course) between a Pentium 120 & an
STFM. With NFS, both machines 'see' each others drives.

It's not that fast, although there are hardware mods that can increase the
Atari port speeds if you need more speed. It is as fast as Ghostlink (which I
also had working).

There is some software on the net that uses a PC parallel type card hooked
into a cartridge port adapter. The PC cards are old, hard to find & expensive
however.

If you wan't me to read any response from you, do not respond here, Direct all responses in E-Mail to: bensmith@teleport.com

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or keep track of your Mailing/Shipping address. To expedite your order, include your Mailing/Shipping address and it wouldn't hurt to include your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff that needs work you can have some ***FREE*** Atari stuff for the cost of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some thing you've been looking for, Something you might want & something New to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml. And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can't attach files to your E-Mail. I will get back to you after the weekend. Please Direct all Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien vs Predator and even complete Jaguar Systems. If you have what I'm looking for, check my Atari Catalogs for stuff to trade at: http://www.teleport.com/~bensmith/bscomputers.shtml or E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitor, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles,

Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it

from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

>
> This is very disappointing...

Well it's not to strange as ASH is going to relase a bunch of clients
later
this year. If they are going to be judged by the latest offerings by ASH
I think they are going to very good indeed. But it will ofcourse not be
an option for everyone.

> These docs aren't even available in German?

Well there are docs for Blip but I think someone said that it didn't
work with IConnect. I also thinks this is a major drawback for IConnect.
I even mailed the author of IConnect but I never got an answer.

1632. Fragen rund um Atari 1040ST

Newsgroup: comp.sys.atari.st
Date: 1997-10-30 00:00:00 UTC
From: Dieter Drossmann <drossman@eis.cs.tu-bs.de>
Message-ID: <34587E90.167EB0E7@eis.cs.tu-bs.de>
Source record: 114413
Cross-posted to:
comp.sys.atari.st,comp.sys.m68k,de.comp.sys.st,maus.sys.atari.desktop,maus.sys.atari.mint,maus.sys.atari.software

Hallo Leute,

ich soll im Rahmen meiner Diplomarbeit Laufzeit-
messungen von C-Programmen vornehmen. Urspruenglich
sollten diese Messungen auf einer SUN Sparc Workstation
vorgenommen werden, aber die ist zu schnell fuer sinnvolle
Ergebnisse. Also hat mein Assi einen alten Atari 1040ST
aus dem Keller gekramt, auf dem jetzt die Laufzeitmessung
erfolgen soll. Dazu muss die unter Unix vorhandene (und
zu messende) Library auf den Atari portiert werden.
Da der Atari selbst nur ueber das TOS-Rom und ein 720KB-
Laufwerk verfuegt, habe ich auf der Sun den Emulator STonX
installiert. Es fehlen mir aber immer noch einige Software-
Tools zur Portierung. Im einzelnen:
- einen Kommandointerpreter (bash, command.com, etc.)
- Tool zum erzeugen eine Library (ranlib)

Einige andere Tools habe ich schon gefunden (ar, as, gcc, make, ...)
Es waere schoen, wenn die Tools unter TOS laufen wuerden,
da der Atari sehr mager ausgestattet ist (KEIN HDD, KEINE
Systemsoftware auf Disk).

But now to something completely different...
Da ich bis jetzt noch keine Erfahrung mit Atari-Computern
habe, aber im Netz diverse Tools gefunden habe, die fuer MiNT
vorbereitet sind, kann mich jemand aufklaeren, was MiNT ist,
welche Hardwarevoraussetzungen es braucht etc.?

Antworten koennen auch an diese eMail-Adresse gesandt werden:
drossman@eis.cs.tu-bs.de

Vielen Dank

Dieter

P.S.
Falls jemand von einem CrossCompiler SUN Sparc (SunOS) --> Atari 1040
(TOS/GEMDOS) weiss, bitte auch darueber Infos an mich.

What a ridiculous statement to make! Uwe is only too happen to help anyone in the Atari scene (wherever they are) use his and other programs. His almost daily postings in this newsgroup reinforce that! Now stop trying to start a flame war by making untrue and irresponsible postings!

From what I understand the only reason Uwe has stopped Computer Direct distributing his software is because they allegedly haven't paid the licence fees for Outside.

I know personally know that certain people/vendors involved in the worldwide Atari scene owe other vendors/groups considerable amounts of money.

Atari Computing magazine will not supply certain people with supplies of the magazine or provide advertising space until outstanding invoices have been paid. We were also forced into this situation!

I'm making no judgements on anyone here in public, but I can understand why software authors take the action they do sometimes. The ACG have had to make similar decisions!

I just want to say, if we had TOS Awards for most prolific game programmer, the award for the last 3 to 5 years would have had to be you. I must say that Res. Gods are coming up quick with their NinTari GodBoy collection. Thanks for ALL of them. We really need an on-line magazine that truly updates all 'TOSers on all current developments. Perhaps it could be profitable by having a banner featuring advertisements from the various TOS/Atari supporting companies still around, such as Parx, ASH, Titan, Medusa, Interplay, OXO, etc. BTW, I would have thought that since MagicMac speeds up the 68k Macintoshes, that it would be the perfect system for next generation game development for all 68030 and above Macs. This would also profit Falcon, TT, Hades, Medusa, PacifiST and other systems capable of running with 256 or more colors and digitized music. Does STOS support 256 and greater colors? Perhaps adding support for 3D model files would be useful to make RayMan stlye games more of a reality for TOS machines. Back in the days when Antic was pushing the 3D art packages and the 3D glasses, I really thought that game creators were going to utilize these packages to bring in more realistic games. I think that Parx M&E system folder makes support for a myriad of formats available to TOS systems. Midiplay brings GM sound to the DMA sound based TOS systems. The possibilities are there.

You don't say, but I suppose you use long file names
over 8+3 ?
Windows 95 store the extended file names in "invalid" file entries
in the directory structure just under the original file entry
that contains the short name, date, time, attribs and the
pointer 1st cluster.

Ths TOS that don't know about these entries might
crash them in writing the entries for the new files
making the directory structure instable.

1647. Cab externals?

Been there, done that.
Visited your "Plena Manlibro de Esperanta Gramatiko" homepage today without any problems in CAB 2.5. Reloaded, rezised and followed most of the links and got back to the mainpage again. Even tried some of the Index links with the same result. Seems like this bug's fixed now then. CAB still lacks support for Java/JavaScript, but so did IE Explorer up to v.4.

I don't think anyone is bashing the good Dr here!
There is no question "in my mind" that his HD Driver product is the best written and best supported piece of software IN THE WORLD...for ANY PLATFORM on dealing with hard drives.

I don't know the meat of this thread...but if Computer Direct, and other Atari dealers in North America
are being shut of the distribution ring...this is WRONG! I've checked with three different dealers in North America to upgrade my HD DRIVER, and they all claim to have back orders and nothing in stock...eager to order a shipment! They may be telling the big lie of course...but it's the word.

Below is not directed to HD Driver, or any particular product...it's just a feeling I think a lot of us get...
A feeling that despite our few remaining dealers TRYING to keep stock of anything Atari...that we're being shut out on purpose in favor of a few larger European distributors.
Okay...so yes, I could go through the hassle of ordering from a European distributor...it'd cost me about four times as much after all the currency swaps and shipping fees...months waiting, and the final straw that breaks my back, is the fact I DID send in registration and support cards on all of my European software titles over the years, and never got the FIRST notification of updates and so fourth that I'm assumeing those registered there in Europe get...at least that's what the cards lead me to believe.

They're not going to ship me something over seas without getting cash first...so why should I when
I got the product here in the States to begin with? Please...follow through with your committments on all shores! Even if dealers can be a pain to work with sometimes...remember that thousands of us bought YOUR product fromt that place...and we depend on the dealer for updates and information.

See...it's a bit different when a product never was sold here in North America to begin with...and from day one you purchased it, and got support from someplace over seas. But getting it off the shelf here one day...only to find that since that date some 3 upgrades have been released all over europe, and your dealer can't even get the update thats over one year old!

Yes...I love Uwe's product...and I'll keep paying to upgrade it as long as I can get it from the guy who sold it to me in the first place.

From: msbaines@cix.compulink.co.uk
Message-ID: <EIvnLB.GIJ@cix.compulink.co.uk>
Source record: 114432

>Yes, please do tell us more about it.
Please note that the book is no longer available. What I am propising is to convert the text to a HYP file.

The Atari A to Z
by Mark S Baines

Jargon, terminology and acronyms are the staple diet of any professional, technologist and hobbyist. The world of computing is no exception and to the uninitiated home or small business user, magazines, manuals and books can be very daunting. Written by someone who understands these frustrations and needs, The Atari A to Z is an encyclopaedia of modern computer terminology specifically pertaining to Atari computers.

Whether you play games on an ST, run your business on a TT or write music on a Falcon, this book is aimed at helping you get to grips with magazines and books that are more perplexing than enlightening. In it, you will find definitions, explanations, mini-articles, tables and lists to help you gain a better understanding of your Atari computer. The material in this book was written with all Atari users in mind. There are simple definitions for the uninitiated and technical data for the experienced. You take what you want, when you want it.

The Book
The Atari A to Z is produced in A5 format, 340 pages long and contained in a quality ring folder for convenience. It contains 2,238 entries, 101 tables and 128,000 words. There are five appendices - Addresses, Book List, Connectors, Extensions, Atari ASCII set, ANSI Character Set.

Firstly, this is a comprehensive general computing dictionary, there being entries for all the common terms and acronyms found in modern day computing. Like any computer user, Atari users require help with terms not specific to their particular machine. They should be able to find what they want here.

Secondly, there are entries of Atari-related terms and acronyms which cover all the Atari computers and consoles. There are expanded explanations and essays, tables and lists which together form a comprehensive inventory of material that The Atari Compendium left out and not found elsewhere. The table of System Variables is more accurate than that in The Atari Compendium. There is a list of Exception Vectors, Atari Cookies and their meanings, Memory Maps for all Atari computers (and more accurate than that in The Atari Compendium), a full Breakdown of the DESKTOP.INF and NEWDESK.INF files (not found in ANY other publication), Errors Messages and Bombs, Pin Connections of all the ports on all the machines, Technical Specifications of the whole Atari range, a Breakdown of the TOS Versions and the differences between them, an explanation of GDOS, MultiTOS, the VT52 emulator and codes, all the

main chips, viruses, a light-hearted look at computer laws, a list of common file extenders and their meanings, a list of contact addresses, a bibliography... this is just a little taster of some of the important aspects of this book. The Atari A to Z is thorough!

The Author
Mark S Baines is a highly experienced computer user having bought his first computer in 1982, been on the communications networks since 1983 and the Internet since 1993. Mark has written regular columns and other articles in various magazines for several years, including more recently ST Applications, ST Review, Atari World and Atari Computing. He has also written a range of software under the Linnhe Computing label including PROFILE 2 - the system analyser.

>Will this HYP file contain images/illustrations as well as text?
No, it is a dictionary. It does contain 101 tables however.

>How about people paying up front?
I thought of that and rejected it because people are so bad at paying up for anything (how many of you have paid up for EVERY shareware program you have used?) that I'd be waiting forever to get the number of promises I need!

People have to want it first and say they do via email before I commit myself to this big task. Otherwise what will happen is that I'll do it, sell 10 disks to have them copied around the world. I'm not having that, I want some return first before the piracy steps in.

BTW, I don't take this newsgroup (I tired of the bickering ages ago). ATM I'm just collecting subject headers and getting the messages that pertain to this thread but on the whole I'm not open to discussion here.

Commitments to buying the disk via email only please!

Slainte mhath
Mark

Hi,

Did someone got STinG connect to Compuserve ?

I can't connect because Compuserve needs that
the login script be executed in 7E1.
Is there a way to overide this ? (Using an external
C or GFA program make the loging and call Dialer
when done ?)

Or did someone suceeded using PAP with Compuserve ?
(Don't really know if it is supported...)

Thanks for help.

Jean-Michel MERCIER.

You're using the 1.08 distribution, aren't you ?

As the fixed bugs concern PPP and IP masquerading only, which you do not
use AFAIK, you might just as well wait until the next major distribution
is out.

Cheers Peter

That's very true, we in the UK also grind our teeth when we see some of the groovy German stuff that's available! :-(

>If you look elsewhere in the thread, I *do* observe that CompDirect's
>situation (eg: shrinking Atari market= less revenues) is also partly
>causing this.

Yes that's also true. But generally speaking any firm selling stuff should pay its suppliers!

> >I'm making no judgements on anyone here in public, but I can understand
> >why software authors take the action they do sometimes.
>
>I understand their motives. Unfortunately, users suffer from this.

Agreed, but Uwe alleges that he is owed money by CompDirect, and I can understand why authors withdraw distribution rights. What can authors do to alleviate the situation? Very little I am afraid to say :-(

>The question remains:
>
>How will Atari users from Canada/US manage to stay involved when
>every Toad and CompDirect looses money, and eventually withdraws
>from the market?

I do sympathise, but unless every Atari program becomes Freeware then there's no real answer.

>Already, ordering from US is WAY too much trouble. Ask a certain
>Lonny Pursell how tricky and complicated it was to ship me books
>and CD-Roms I bought from him, let alone cashing my cheque.

A similar situation does exist here in Europe. The growth of the Interactive and Cyberstrider shareware registration schemes has really helped things though. So maybe some of you Canadian and American Atari users could start up something similar?

>Given this, ordering from directly from System Solutions is even
>less of an option.

Some people in the UK might say that they too have difficulty when ordering stuff from certain UK firms! ;-)

I have has exactly this problem too.

I was copying files between my ST and PC. At one point, I renamed a file on the PC so that it broke 8.3 format. I then moved this file off the floppy onto my hard disk.

When I re-inserted the floppy into the ST, there was a LARGE file "A" on the floppy, and STOS was rather peeved with the disk. I had to reformat it.

Ozzy.

It is New York, and here are two others in New York : ny.us.starnet.org and
taxi.dal.net. Some others in US east : Baltimore.MD.US.Kidsworld.org,
kechara.sorcery.net (Cambridge).

Actually I can give you dozens of sites in the US east, so you'd better provide
a little more info, for instance the state where you live.

Just thought I'd mention that I did finally get Forecast to work under STing as well...seems I read the docs and thought that I was supposed to enter each cites 3 digit (number) code and this never worked. I can enter the 3 -letter- code though, and it works everytime...! Hurrah! :)

Bah, seems I missed a few. Pensacola.FL.US.ChatNet.org (Pensacola),
centurion.dal.net (Tampa), opus.bridge.net (Miami), Shadow.FL.US.EarthInt.net
(Espoo), irc.aohell.org (Gainsville), Miami.FL.US.StarLink.org (Miami),
irc.starnet.org (Jacksonville), brandon.FL.US.stormnet.org (Brandon),
irc.afn.org (Gainesville), llama.xworld.org (Pensacola) are all in Florida.
Hmmm, quite impressive list I guess. So now you possibly even find an IRC
server in the city where you live ... ;-)

> Well, it's not a very big problem for me.
> But some people may have the feeling it's only a waste of bandwidth.

It's not only that. Many people have to pay for all telephone time (local calls
free of charge is the *exception* around the globe !), ISP online time, and,
additionally, transferred data volume. Big signatures boost all three of them.
Of course this is not an issue as long as only one or two guys do that, but if
a significant percentage of usenetters start doing it, those people would end
up paying a lot more for being on the net.

So generally I'd advocate to stick to the netiquette rules, they are there for
a purpose ! Please cut the signature down to the usual standard, which I believe
is four lines, isn't it ?

Cheers Peter

Source record: 114301

It could be that the power supply is going bad, but the STe should work at 4.91 volts. Though it maybe loading down the power supply and dropping the voltage lower when actually running. Try to measure the power supply line under load. This will tell you if the supply is really the problem. Hope that this helps you out.

After re-loading CD Tools on my AB/Falcon, I installed the Spin CD XFS driver for MiNT. I only have a few Mac CDs, and could access one of them (Aniplay works cool from CD:). I tried out a couple of Adobe CDs, but was not able to read them. Got an error message and then the only thing in the directory was "track01.dat". Does it sound like my configuration is wrong, or are these disk "MacSpecials"?

Thanks,

Mike

1673. Hard Drive Formatting in a GEM environment

Newsgroup: comp.sys.atari.st
Date: 1997-10-31 00:00:00 UTC
From: Eonic Man <eonicman@erols.com>
Message-ID: <3459DF1D.CD457593@erols.com>
Source record: 114304

If Joe Schmo Atari User of the 90's wishes to continue to run his software on a larger drive, and wants to use the long file names etc. (Let's say he has a 4 gig hard drive and will partition it into 4 sections). Is he better off having 3 sections as minix and one as BGM for compatibility sake or is he better off totally BGM or totally Minix? There don't seem to be ANY GEM programs made for formatting, partitioning, optimizing, etc. Minix partitions. Why is that if Minix is highly suggested compared to GEM or BGM partitions? On one hand we are incouraged to switch to the Minix format, but it isn't made more approachable for the MultiTOS generation. It seems to me that if Atari was aware of the benefits of minix format, they should have utilized it on the Falcons and TT's that they were selling with MiNT and MultiTOS. Does Minix have the 4 gig limitation? I don't understand why Atari didn't ship the Falcons with minix partitions, minix support in their hard drive software, long name support in their file selectors, etc. and so on. Please someone shine some light on this for me. BTW, we have mint 1.12.6 and we have mint(vm) 1.14.5. When will we see further improvements in the multitos clones Oaesis and XaAES? The intregue and suspense of Fenix is starting to fade. It might as well be a project done by the CIA (top secret). It sounds like the "NextSTep" for Atari/TOS computers. I should be content now that I have my PowerMouse, Midiplay, CAB, etc. It all takes time on Ataris.

I've tried the above myself, and exactly the same thing happens here.
It seems MUNPACK.TTP doesn't format the mime encoded file properly.
I've attached an example file to this post, mime encoded via Newsie
and Munpack.
Decoding (properly formatted) mime attachments works fine, though.
Maybe the author of MUNPACK can take a look at this?

I have has exactly this problem too.

I was copying files between my ST and PC. At one point, I renamed a file on the PC so that it broke 8.3 format. I then moved this file off the floppy onto my hard disk.

When I re-inserted the floppy into the ST, there was a LARGE file "A" on the floppy, and STOS was rather peeved with the disk. I had to reformat it.

Ozzy.

Yep, its in the CAB manual, not the PPPConnect one as some people
have said.

>Are they on drug? Isn't that false advertising in some ways?

Apart from the fact it isn't in an advert ;)

>They need that to sell more magic and pppconnect?

Odd thought, considering you'd have had to purchase CAB+PPPConnect to
read this ;)

Its just a mistake in a manual. All manuals have them. All books have
them, thats why you have addendum and so on. I can't believe people
are getting so worked up about it, here and on IRC!

Neil.

From: mb@tos.pl.net
Message-ID: <WKTRCAD@tos.pl.net>
Source record: 114363

I am in a situation where some very inexperienced users will be trying to use my MiNT system, and it would be very helpful if I could watch what they are doing and do things for them if necessary.

I would want to be able to see exactly what the user is seeing, and be able to cause my typing to take effect exactly as though they had typed it. These users would be connected to the machine via a serial port.

How can this be accomplished? I have a KGMD-like MiNT system.

Any assistance would be appreciated.

Newsgroup: comp.sys.atari.st
Date: 1997-10-31 00:00:00 UTC
From: Michael Saeger <wanda@xnet.com>
Message-ID: <Pine.SOL.3.95.971031003409.2817A-100000@typhoon>
Source record: 114364

We just wrote a CGI program using PowerBuilder at work. The CGI program produces a long drop-down box. You select an item in the drop down box and the CGI program runs an SQL query against a Sybase database. The CGI program then returns the data from the database along with links to other documents. The CGI program runs fine on Internet Explorer and Netscape. On CAB I get the drop-down box. But pressing the "Submit" button only returns an error. It is as if the rather long URL string that should be returned to the CGI program is incomplete. Even Lynx returns the correct database information.

Can this be fixed? I have seen other posts that CAB has problems with CGI programs.
Thanks!

That exactly is the problem. Today I got into contact with Computer
Direct again, after not hearing anything from them for a very long time.
I hope that we can settle this matter now.

>need YOUR help.

I posted a similar set of questions and was only answered by Claes, Uwe, and Mark Fassett. Come all you Atari-audio-recording people! There's GOT to be than 4 of us! This is info we can ALL use to benefit from the experience of others. Please post your info! OK, enough ranting, here's my info:

External SCSI Quantum LPS540S 540meg/ internal IDE Toshiba MK1002MAV 1.08gig/ ICD-PRO 6.5.5/ Nemesis/TOS 4.04/ Logic Audio (OK, I know Claes was talking about Cubase Audio, but I would think they have similar requirements in hard drives)

Using ICD's RATEHD.PRG, these are the results I got from my internal Toshiba IDE and Quantum external SCSI - with Nemesis at the 3 possible settings of OFF (normal Falcon speeds)/ LO (cpu and bus at 20) and DSP at 40/ HI (cpu and bus at 24 and DSP at 48).

Toshiba IDE * Quantum SCSI 5400rpm
transfer(K/s) access * transfer(K/s) access
Nemesis *
Off 1834 K 17ms * 1694 K/s 15ms
*
LO 2247 17 * 1709 15
*
HI 2666 17 * 1709 15

Then I tried Soundpool's patched version of AHDI 6.06(u). I put that on a floppy, booted from the floppy and ran the same tests and got the same results. THEN, I decided to download the HD Driver 7 demo, tried the same tests and still got the same results. It should be noted that every time I did the tests I did each one 3 times, and got VERY little variance. The result posted is the most common one (if there was any difference at all). The Quantum was advertised at 12ms, and I seem to recall getting that reading at one time, but I guess it's just old and tired. ;-)

As far as number of tracks: With the IDE drive, and Nemesis OFF, I could do no more than 5 tracks before bad timing errors. With Nemesis on HI, I got 8 tracks playing fine. With the SCSI drive, and Nemesis

OFF, I got 4 tracks playing fine, but had some small clicks when trying more than that. With Nemesis on HI, I got 6 tracks playing fine, but had a few small clicks when trying more.

Time-s-t-r-e-t-c-h-i-n-g? With Logic Audio, changes are saved as a new file, so I don't think it would make any difference.

Hope this is helpful -

>What's Maggie 24 anyway ?

A very informative and long standing ATARI specific diskzine,

Original a heavy "scene" publication and slated by the then newstand press for its content and language used,
However since the running of Maggie was taken over by Chris Holland (CiH) Quite a few years ago...there has been a complete revamp and clean up, it is now considered amongst diskzine circles (and me personaly) to be the best diskmagazine ever made, It is certainly the longest standing,
Other diskmags have had more Issues,Such as STOSSER and a couple of others, But none as many years:)

Indepth and detailed reviews are one of its features, as the main person behind Maggie is a staunch Falcon user who also hasn't forgotton us little people with STe's then you will find the balance about right, Unlike publications such as ATARI Computing and ATARIphille Maggie is not aimed purely at the Top end users, theres plenty of content for bog standard ATARI owners of which there are MANY outside the on-line community, something that people with modems seem to sadly forget,

The writing in Maggie is superb, Only there can you read a techie document that has little interest to you, and smile at the same time because of the very subtle humour added, for example I thouroughly enjoyed reading the recent very detailed report on buying, fitting and using the nemesis upgrade, yet I know I will never need one in my STe :)

Maggie is released about 3 or 4 times a year, the anticipation only adds to the pleasure of the read....

Like all diskzines should be..maggie is Free, You can get a Falcon specific or an ST version, I don't think the content is different, but the shells certainly are:)

Maggie have always had a slight internet presence, But more recently the editorial team have taken the plunge and gone on line, for more information you can now contact them at: maggieteam@zetnet.co.uk

From: soleymas@abaforum.es
Message-ID: <63ct80$o1c$1@talia.mad.ibernet.es>
Source record: 114373

```
The latest version of the serial.stx (27/10/97) allows PPP
with infovia (just interesting for spanish users)
settings are:
Dialer: PPP/PAP. MTU=1500, IP 000.000.000.000, trace route, login bat
Conf:
TCP_PORT = 1024
MSS = 1460
RCV_WND = 8192
DEF_RTT = 50
DEF_TTL = 64
TCP_ICMP = 1

or all blank

CPX: PPP MTU 1500

TOS:3.06 on MEDUSA040

Now spanish tosers will choose freely their servers.
Many Thanks!!!!!! Peter, I'm sending you my `postcardware` fee.

>programs made for formatting, partitioning, optimizing, etc. Minix partitions.

Yes. The main problem is, MiNT fans usually rhymes with Unix fan,
which results in commandline freaks. This means all formatting and
compressing software is VT-52 textmode.

> Why is that if Minix is highly suggested compared to GEM or BGM partitions?
>On one hand we are incouraged to switch to the Minix format, but it isn't made
>more approachable for the MultiTOS generation.

There are a couple of projects that have been mentionned:

1) a GEM installer/dialer for PPPkit (Mintnet for 8+3)

2) an upgraded Diamond Edge that recognizes Minix and VFAT

Neither have seen the light, so MiNT remains a Unix freak venture.
However, Jo Even Skarstein is working on an improved dialer.

>When will we see further improvements in Oaesis and XaAES?

XaAES saw a small beta-7 release recently.

>The intregue and suspense of Fenix is starting to fade.

Fenix IS being worked on, but is handled by a very busy Sven Karlson,
who improves it between his teaching/studying duties in University.

Bear in mind that Fenix is a complete TOS rewrite. This takes time.

>It might as well be a project done by the CIA (top secret).

lol! It's nearing a first beta. Sven recently requested competent
testers on the MiNT list.

>It sounds like the "NextSTep" for Atari/TOS computers.

Most of us on the MiNT list think so. We are impatiently awaiting
the first release. ;-)

>x 480 16 colors, some in 640 x 480 256, some in ST high res mono, some in ST
>low, etc. Is there a program I can assign to each program to make it switch
>into the proper res right when I click on it? Thanks. -Satcom2

Yep, the resolution switching problem has annoyed me ever since I got
the Falcon. A lot of game coders don't put proper res-switching code
into their work, but we know it's possible - just look at Apex,
Crapman and Martin Steen's high colour games to name a few.

So I asked a friend of mine to code a utility to overcome these
problems. The goal was to make it work for NON-GEM programs and run
under NVDI, Magic, screen expanders etc. It's installed as an
application and switces resolutions by looking at a files extention
(i.e. *.PR1 for st-low res, *.PR2 for medium res, etc..) and switches
back when quitting.
Unfortunately, he didn't have the time to finish the project, but the first
beta version works fine with st-low and medium resolutions.

I'm not a programmer myself, but I have the source code so if anyone with
programming experience finds this interesting and want to continue the work,
contact me by PM. I'd love to see this util develop further!

Greetings all:

Could someone tell me which fixes for TOS 1.4 I should be running and the order they should run in?

Currently using (in order):

Drivn
MFP
Stiktsr
NVDI.3.1
STfaxmgr
Then the tos fixes.

Does NVDI need these fixes there?

Regards,

Willard.

Hmmm ... I've never changed mine. In fact I don't think I'd know how to determine its version number anyway :-)

> E-mail editor, and any other externals that you are using? Also, if you have
> a Falcon are you better off using the '030 version of CAB vs 1.5? Thanks! :)

I see you are using Oasis - I thought it had its own editor? Maybe just in later versions.

I use Everest with Newsie - mainly because there are no particular demands of the text editor and I use Everest for EVERYTHING so I am used to it.

I have stuck the 030 versions of CAB v2.0a and .OVL on my TT and can guarantee that they work. However I did no performance comparisons with the standard kit so don't know exactly how much speedier these are.

ATM I have no requirement for clients other than CAB and Newsie - they give me www, ftp, e-mail and newsgroups. I DO want to replace the CAB demo with v2.5 but Systems Solutions say they have lost my order so it looks as though I'm going to have to wait a while :-(

I have has exactly this problem too.

I was copying files between my ST and PC. At one point, I renamed a file on the PC so that it broke 8.3 format. I then moved this file off the floppy onto my hard disk.

When I re-inserted the floppy into the ST, there was a LARGE file "A" on the floppy, and STOS was rather peeved with the disk. I had to reformat it.

Ozzy.

I have has exactly this problem too.

I was copying files between my ST and PC. At one point, I renamed a file on the PC so that it broke 8.3 format. I then moved this file off the floppy onto my hard disk.

When I re-inserted the floppy into the ST, there was a LARGE file "A" on the floppy, and STOS was rather peeved with the disk. I had to reformat it.

Ozzy.

I get this as well. I don't know why it does it, may be the way it is
formatted, but I find unless I format the diskette on the PC, I cannot
get it to be read by both computers.

hi, yes, sure, but these are not useful to me at all, I can give you
even more US irc servers, but that's not very interesting.
you have to go on efnet europ side. Therefore, I only know 3 or 4
server that go on the european side. And a lots of people there :)
BTW, If I want the US side I don't even have to choose the tampa one,
coz the irc.primenet.com is more than excellent (fast).
bye./ and see you on the EUROPEAN side, not on some lonely US server
where nothing happens (atari-wise).

Here are the person that you can see on efnet europ:
uwe seimet, thomas binder, lonny pursell, draco, martin eric racine,
nicholas flintman, mario becroft, etc etc..
bye

1714. STinG Info Needed

Newsgroup: comp.sys.atari.st
Date: 1997-11-01 00:00:00 UTC
From: csilver@No.HORMEL.UCE.kendaco.telebyte.com
Message-ID: <63esr8$lc3$1@brokaw.wa.com>
Source record: 114241

Hi Kemosabies,

Just a few more STinG questions :) I now have two ISP's here in the USA. I did this just to test STinG. This is a bit convoluted so please bare with me. With one ISP I have two separate accounts, one slip and the other ppp. With the other, only ppp(pap). Obviously, I'm posting this as I can't get STinG/ppp to work properly with either ISP. (New STinG v1.08)

I do have STinG/slip working fine with my first ISP, but I have a static IP and STinG always worked :) However, STinG/ppp will not initialise and get my dynamic IP with this ISP (again, two separate accounts, same ISP).

With my new ISP, I have only a ppp(with pap) account and STinG CAN get my dynamic IP, but it can't resolve DNS with clients. The debug.log shows a good connection. But that's a bit odd. With STinG/slip, which works fine, no debug.log is created. If those of you who have STinG/ppp working, can you get a debug.log or is it created only on failed connections?

A few more oddities. STinG/slip will work fine even with the default.cfg from the wrong ISP! Nameserver, domain, etc. isn't needed in the file?

I'll summarize for followups:

1) Is a debug.log created with good ppp connections (DEBUGGING=TRUE)?

2) Does anyone in North America have STinG/ppp working with a dynamic IP?

3) What parameters of the default.cfg file are "really" neccessary?

4) There's at least 4,000 ISP's in the USA. It would be good to know if any work well with STinG/ppp (with dynamic IP). Info between ISP's would help.

5) One more oddity. WenSuite v2.21 can connect/initialise to my first ISP, but not the second. Just the opposite of STinG...

6) STinG still doesn't work with MultiTOS/MiNT on my Falcon.

I apologize to those weary of TCP/IP stuff, but if not Usenet, where??? Peter Rottengatter has a tough job on trying to get Atarian's World Wide connected. Good luck to him and us Surfer's :)

Regards,

Charles
14meg Falcon/Nemesis/NVDI/TOS4.04 or MultiTOS/MiNT/etc.

1720. TOSBOX PC/ST emulator v 1.00 released

Newsgroup: comp.sys.atari.st
Date: 1997-11-01 00:00:00 UTC
From: Mark Slagell <bald_soprano@usa.net>
Message-ID: <345BD9F5.3EC2@usa.net>
Source record: 114247
Cross-posted to: comp.sys.atari.st,comp.emulators.misc

TOSBOX, a shareware PC/ST emulator for productivity applications, is now available in version 1.00.

Download it from http://www.geocities.com/SiliconValley/Vista/4448/

HTML docs, FAQ, and screenshots can also be found at this site.

Notable features:

1. Extended VGA/SVGA video, up to 1024x768 in 16 colors (since standard GEM programming protocol automatically supports this, many applications turn out to be compatible with extended video modes even when the original developer didn't think of it).

2. Up to 14 megs ST memory, depending on your PC's capacity; TOSBOX has a surprisingly small footprint and leaves lots of room on most systems.

3. Full and fast access to all PC file devices including arbitrarily large hard drives, CD-ROM, and floppies of any density; multiple mounted directories allow you to use the DOS file structure without modification, or hide data from the emulator, or set up several boot drives within the same MS-DOS drive (in any case, all files are freely accessible outside the emulator).

4. Support for TOS versions 1.00, 1.04, 2.05, 2.06, and compatibility also with most others.

Some new stuff in version 1.00:

* Complete RS-232 emulation including hardware flow control
* Numerous bugfixes mean compatibility with many more programs than before, including Pagestream, Word Up, DataManager ST, Papyrus, Tempus, and most compiled GFA BASIC applications
* Compatibility with more SVGA hardware
* Blitter emulation
* More robust exception handling
* Redundant high-level printer support, so BIOS/GEMDOS printing is now almost as fast as writing directly to the hardware.

>I use Oasis 1.35 to send and receive my mail. But, since few days,
>I can only send and I can't receive my letters. Is there anybody
>who can help me?

Maybe your pop mailhost isn't correct.

Take a look at your startup.nos. The 'pop mailhost' is for retrieving
mail.
It should like something like this.

```
# ================================SMTP================================
# Tell smtp how often to scan for outgoing mail (60 seconds)
smtp timer 300

# Turn debugging on just a little so that we see it in the log (7 max)
smtp trace 0
smtp verbose on
smtp maxclients 10
smtp batch off
smtp gateway 123.45.141.1
smtp beep on
smtp wait 20
pop mailbox viatour
pop mailhost 123.45.141.1 3
pop userdata [your_logname your_password]
pop timer 1200
```

Don't delete '3' at the end of the pop mailhost line. This indicate
that you uses a pop 3 mailhost.
Ofcourse you must change the IP to your need.
Instead of the numeric address you may use the DNS
(pophost.skynet.be?) but then it will take about 35 sec before you'll
have the NET prompt. Use the DNS temporaly untill you've find out
which IP the pop mailhost has.
You can find this back into the logfile (nos.log)

HARDWARE

13. Wizztronics DEKA 2 (detachable extended keyboard adapter)
If you have a Mega2/Mega4/MegaSTe/TT = Plug (to the RJ11 jack) and play.
If you have 520STfm, 1040 ST, 1040 STe and Falcon 030: Open the case

and install the included connector (plug it in, no soldering involved :) $42

14. Atari SM 124 excellent condition: $20

15. Intel External 144e (14.4Kb) Fax/Modem with cable for Atari $44.

16. Beetle mouse $15

17. FALCON 030 4 MBRam *Tos4.04*IDE 85Mb*Screenblaster, Math coprocessor, ready for Cubase Audio (was running CAF!) since the Analog in-outs were modified according Steinberg's suggestions. $ 550 (All ports work. It has had not too much use and it's full setup to go, currently I am using it with an SVGA and/or SM 124. Hard disk does NOT have bad sectors.)

Also Free stuff:
Modem 1200 internal
Atari Ste language disk English-USA CA 400607-001 Rev B
